The technique of rapid hypnoanalysis addresses the whole brain and places the feeling back into brief therapy without removing the logic or the efficiency. It offers a refreshing alternative that allows therapists to go deeper while being even briefer. Part I covers basic concepts and principles. The value, principles, and treatment planning of hypnoanalysis are discussed, including special intake questions and how to set up ideomotor signals. Part II covers basic applications of rapid hypnoanalysis and illustrates their employment. The seven common causes of psychosomatic disorders, ideomotor applications to Direct Suggestion in Hypnosis (DSIH), hypnotic preparation and care of the surgical patient, self-hypnosis, and treating the cognitive and emotional components of persistent pain are examined. Part III presents clinical transcripts of cases to illustrate the actual uses of the technique with psychosomatic patients. These transcripts explore the technique with a complex smoking cessation patient, a simple smoking recall session, a one-visit cure of a hypersensitive scar, and a workshop demonstration session with an asthma patient. This is a how-to book that provides numerous case examples and illustrations showing specifically how ideomotor analysis techniques are used. 2014 kia soul manual: A Historical Review and Analysis of Army Physical Readiness Training and Assessment Whitfield East, 2013-12 The Drillmaster of Valley Forge-Baron Von Steuben-correctly noted in his Blue Book how physical conditioning and health (which he found woefully missing when he joined Washington's camp) would always be directly linked to individual and unit discipline, courage in the fight, and victory on the battlefield. That remains true today. Even an amateur historian, choosing any study on the performance of units in combat, quickly discovers how the levels of conditioning and physical performance of Soldiers is directly proportional to success or failure in the field. In this monograph, Dr. Whitfield Chip East provides a pragmatic history of physical readiness training in our Army. He tells us we initially mirrored the professional Armies of Europe as they prepared their forces for war on the continent. Then he introduces us to some master trainers, and shows us how they initiated an American brand of physical conditioning when our forces were found lacking in the early wars of the last century. Finally, he shows us how we have and must incorporate science (even when there exists considerable debate!) to contribute to what we do-and how we do it-in shaping today's Army. Dr. East provides the history, the analysis, and the pragmatism, and all of it is geared to understanding how our Army has and must train Soldiers for the physical demands of combat. Our culture is becoming increasingly "unfit, due to poor nutrition, a lack of adequate and formal exercise, and too much technology. Still, the Soldiers who come to our Army from our society will be asked to fight in increasingly complex and demanding conflicts, and they must be prepared through new, unique, and scientifically based techniques. So while Dr. East's monograph is a fascinating history, it is also a required call for all leaders to better understand the science and the art of physical preparation for the battlefield. It was and is important for us to get this area of training right, because getting it right means a better chance for success in combat.
