**2020 technology pkwy mechanicsburg pa 17050: Neuro-optometric Rehabilitation** William V. Padula, 2000 This is an in-depth study of the various issues that lie at the core of appropriate neuro-optometric rehabilitation. Background material includes the relationship of vision to development; the examination of perception as it is affected by vision impairment; and how function and performance are impacted by the sensory component of the visual process. The next phase of understanding is the relationship between vision, posture and movement. Whether it is attempting to understand the relationship of vision and its influence on posture for a physically-disabled child or, how vision affects posture after a person has suffered a cerebral vascular accident or traumatic brain injury, the developmental nature of vision affecting the sensory motor system is the basis by which one establishes the framework for visual rehabilitation of the neurologically-challenged patient. The final chapters represent new directions in neuro-optometric rehabilitation with emphasis on post-trauma vision syndrome as well as visual midline shift syndrome, a new concept in thinking concerning the sensory distortions that can occur when there is a neurological interference in the sensory-motor system.--Publisher's description.

**2020 technology pkwy mechanicsburg pa 17050: *The Management of Sickle Cell Disease*** U. S. Department of Health, 2002 #1 Best Seller on Sickle Cell Disease (SCD). Sickle cell disease is a group of blood disorders passed down from parents to children. Sickle cell anemia shortens life expectancy by 30 years via bacterial infections, painful swellings, fever, arthritis, leg ulcers, eye, lung & heart damage. Over 100,000 people, mostly African-Americans, in the United States have sickle cell disease. Over 2 million people have sickle cell trait in America. It is estimated that more than 300,000 children are born each year with SCD around the world. This edition of *The Management of Sickle Cell Disease (SCD)* is organized into four parts: 1. Diagnosis and Counseling 2. Health Maintenance 3. Treatment of Acute and Chronic Complications 4. Special Topics. The original intent was to incorporate evidence-based medicine into each chapter, but there was variation among evidence-level scales, and some authors felt recommendations could be made, based on accepted practice, without formal trials in this rare disorder. The best evidence still is represented by randomized, controlled trials (RCTs), but variations exist in their design, conduct, endpoints, and analyses. It should be emphasized that selected people enter a trial, and results should apply in practice specifically to populations with the same characteristics as those in the trial. Randomization is used to reduce imbalances between groups, but unexpected factors sometimes may confound analysis or interpretation. In addition, a trial may last only a short period of time, but long-term clinical implications may exist. Another issue is treatment variation, for example, a new pneumococcal vaccine developed after the trial, which has not been tested formally in a sickle cell population. Earlier trial results may be accepted, based on the assumption that the change is small. In some cases, RCTs cannot be done satisfactorily (e.g., for ethical reasons, an insufficient number of patients, or a lack of objective measures for sickle cell crises). Thus the bulk of clinical experience in SCD still remains in the moderately strong and weaker categories of evidence. Not everyone has an efficacious outcome in a clinical trial, and the frequency of adverse events, such as with long-term transfusion programs or hematopoietic transplants, might not be considered. Thus, an assessment of benefit-to-risk ratio should enter into translation of evidence levels into practice recommendations. A final issue is that there may be two alternative approaches that are competitive (e.g., transfusions and hydroxyurea). In this case the pros and cons of each course of treatment should be discussed

with the patient. This book is B&W copy of the government agency publication.
