Wolf, Xiongwu Wu, Yi Xue, Darrin M. York, Shiji Zhao, Peter A. Kollman, 2021-06-13 Amber is the collective name for a suite of programs that allow users to carry out molecular dynamics simulations, particularly on biomolecules. None of the individual programs carries this name, but the various parts work reasonably well together, and provide a powerful framework for many common calculations. The term Amber is also used to refer to the empirical force fields that are implemented here. It should be recognized, however, that the code and force field are separate: several other computer packages have implemented the Amber force fields, and other force fields can be implemented with the Amber programs. Further, the force fields are in the public domain, whereas the codes are distributed under a license agreement. The Amber software suite is divided into two parts: AmberTools21, a collection of freely available programs mostly under the GPL license, and Amber20, which is centered around the pmemd simulation program, and which continues to be licensed as before, under a more restrictive license. Amber20 represents a significant change from the most recent previous version, Amber18. (We have moved to numbering Amber releases by the last two digits of the calendar year, so there are no odd-numbered versions.) Please see <https://ambermd.org> for an overview of the most important changes. AmberTools is a set of programs for biomolecular simulation and analysis. They are designed to work well with each other, and with the "regular" Amber suite of programs. You can perform many simulation tasks with AmberTools, and you can do more extensive simulations with the combination of AmberTools and Amber itself. Most components of AmberTools are released under the GNU General Public License (GPL). A few components are in the public domain or have other open-source licenses. See the README file for more information.

2021 ram 1500 owners manual: What Does This Button Do? Bruce Dickinson, 2017-10-31 New York Times Bestseller "Illuminating and very entertaining...a compelling read about someone who is much more than just the guy who sings for Iron Maiden." —Loudwire A long-awaited memoir from the larger-than-life, multifaceted lead vocalist of Iron Maiden, one of the most successful, influential and enduring rock bands ever. Pioneers of Britain's nascent Rock & Metal scene back in the late 1970s, Iron Maiden smashed its way to the top, thanks in no small part to the high-octane performances, operatic singing style, and stage presence of its second, but twice-longest-serving, lead singer, Bruce Dickinson. As Iron Maiden's front man—first from 1981 to 1993, and then from 1999 to the present—Dickinson has been, and remains, a man of legend. But OTT front man is just one of the many hats Bruce wears. In addition to being one of the world's most storied and well-respected singers and songwriters, he is an airline captain, aviation entrepreneur, motivational speaker, beer brewer, novelist, radio presenter, and film scriptwriter. He has also competed as a world-class level fencer. Often credited as a genuine polymath Bruce, in his own words (and handwritten script in the first instance!), sets forth many personal observations guaranteed to inspire curious souls and hard-core fans alike. Dickinson turns his unbridled creativity, passion, and anarchic humour to reveal some fascinating stories from his life, including his thirty years with Maiden, his solo career, his childhood within the eccentric British school system, his early bands, fatherhood and family, and his recent battle with cancer. Bold, honest, intelligent and very funny, his memoir is an up-close look inside the life, heart, and mind of one of the most unique and interesting men in the world; a true icon of rock.

The book follows Ant's personal build of the car, from the selection of the donor MG TD for the chassis, and Alfa Romeo Spider for the engine and gearbox, through modifying the chassis, building the suspension, steering, brakes, bodywork and interior, and putting all the components together to produce a finished one-off 'special.' Content includes: Introduction The history of specials Planning Donor car Chassis, suspension, steering, rear axle Engine, fuel system, cooling system, ancillaries, exhaust Gearbox Bodywork Braking system Cockpit Wiring Preparation and painting Testing Setting up and Making road legal.
