2023 hyundai elantra n manual sedan specs: The Age of Spiritual Machines Ray Kurzweil, 2000-01-01 NATIONAL BESTSELLER • Bold futurist Ray Kurzweil, author of *The Singularity Is Near*, offers a framework for envisioning the future of machine intelligence—"a book for anyone who wonders where human technology is going next" (The New York Times Book Review). "Kurzweil offers a thought-provoking analysis of human and artificial intelligence and a unique look at a future in which the capabilities of the computer and the species that invented it grow ever closer."—BILL GATES Imagine a world where the difference between man and machine blurs, where the line between humanity and technology fades, and where the soul and the silicon chip unite. This is not science fiction. This is the twenty-first century according to Ray Kurzweil, the "restless genius" (The Wall Street Journal), "ultimate thinking machine" (Forbes), and inventor of the most innovative and compelling technology of our era. In his inspired hands, life in the new millennium no longer seems daunting. Instead, it promises to be an age in which the marriage of human sensitivity and artificial intelligence fundamentally alters and improves the way we live. More than just a list of predictions, Kurzweil's prophetic blueprint for the future guides us through the inexorable advances that will result in:

- Computers exceeding the memory capacity and computational ability of the human brain (with human-level capabilities not far behind)
- Relationships with automated personalities who will be our teachers, companions, and lovers
- Information fed straight into our brains along direct neural pathways

Eventually, the distinction between humans and computers will have become sufficiently blurred that when the machines claim to be conscious, we will believe them.

In the 1960s, the rivalry between the superpowers brought us into space, adding a whole new dimension to human life. The last frontier was open: between 1969 and 1972 twelve men (but no women) walked on the moon. No one has since. The space race revealed itself for what it really was: a political and military competition. Space agencies, however, have not been idle and the exploration of the solar system has continued with probes and robots. Without politics, science has thrived. But the lack of government funding has opened space exploration to the forces of capitalism: the race has started again, with different rules and different players. For those of us who remain on Earth, space offers a spiritual dimension, and the search for answers to age-old questions. Colonizing Mars might not be the solution to humanity's problems, but the promise of space—whether expressed in a tweet by Elon Musk or a photo taken by a NASA rover on Mars—keeps proving irresistible.
