2023 tacoma advanced technology package: *Circular Economy Implementation for Sustainability in the Built Environment* Cobîrzan, Nicoleta, Muntean, Radu, Felseghi, Raluca-Andreea, 2023-10-03 The construction sector plays an essential role in the global economy, using many exhaustible natural resources, most of which are renewable in low percentages. Moving towards a circular economy is essential because optimizing the consumption of materials and energy contributes to the development of an economic system that is independent, more competitive, and more resilient in the face of economic and social crises and various environmental factors. The current “take, make, and dispose” model of the economy is unsustainable, so a shift in thinking towards a circular economy is necessary. This circular economy is an economic model that minimizes the use of natural resources by selecting them intelligently and minimizing the use of raw materials, favoring the use of recyclable materials wherever possible while managing the resources used and maintaining and reusing them in the economic system for as long as possible. *Circular Economy Implementation for Sustainability in the Built Environment* emphasizes the need to implement a circular economy model in the built environment and how to create a system that optimizes the use of resources and construction materials while preserving their properties and values. Covering topics such as automobile industries, lean manufacturing, and operation strategy, this premier reference source is an excellent resource for engineers, construction managers, business leaders, urban planners, students and educators of higher education, researchers, and academicians.

2023 tacoma advanced technology package: *The ‘New Normal’ in Planning, Governance and Participation* Enza Lissandrello, Janni Sørensen, Kristian Olesen, Rasmus Nedergård Steffansen, 2023-07-17 This book offers a unique and timely contribution, informed by responses to

the COVID-19 pandemic, to unpack the intertwined challenges that planning needs to cope with in the future. It argues that the pandemic and post-pandemic periods, in their successive waves of restrictions and social distancing, have disrupted 'normal' practices but have also contributed to shaping a 'new normal'. The new normal is emerging, re-configuring, and prioritizing the substantive objects of planning and its governance and participatory processes. This book discusses this shift and presents a collection of episodes and cases from diverse European urban contexts to develop a new vocabulary for describing and addressing challenges, models, perspectives, and imaginaries that contribute to defining the new normal. The book is aimed at scholars interested in urban planning, sociology, geography, anthropology, art, economy, technology studies, design studies, and political science.

2023 tacoma advanced technology package: *Post Un-Lock* Grazia Brunetta, Patrizia Lombardi, Angioletta Voghera, 2023-07-03 This open access book builds a framework that holds together numerous open issues in territorial planning: from the understanding of territorial,

landscape, environmental and climatic dynamics to the analysis of local vulnerabilities, to the use of modern survey techniques to support planning. What is the role of urban and regional planning in achieving the sustainable development goals of our communities considering the major issues posed by the COVID-19 pandemic in urban planning? And how do these medium- and long-term objectives interact with the needs that the emergency has given rise to? *Post Un-Lock*—from territorial vulnerabilities to local resilience—aims to provide the reader with a useful key to understand how the COVID-19 pandemic can be seen as a catalyst for a restart based on the concepts of sustainability and resilience. In fact, the COVID-19 experience evidences the need to propose a planning system able to integrate multiple scales according to an interdisciplinary approach focused on in-depth knowledge of the territorial risks and vulnerabilities. Besides, with the contribution of the new technologies, it is able to rethink spaces on a neighbourhood scale, conceived as a local resilience unit that ensures the population high standards of safety, liveability, and accessibility to proximity services. In this view, planning is increasingly concerned about social aspects and the well-being of communities, supported by indicators and evaluation tools. With the proposal of the concept of local resilience unit, *Post Un-Lock* takes a step forward towards the definition of a new paradigm of local planning and a topic for urban regeneration.

2023 tacoma advanced technology package: Public Policies for Territorial Cohesion

Eduardo Medeiros, 2023-03-07 This book introduces a comprehensive and updated analysis of the role of public policies to promote territorial cohesion processes and trends in a given territory. By being the first book taking a reflective and holistic approach on how public policies can lead to more cohesive and balanced territories, it advances theoretical avenues for academics and showcases current academic research to policymakers and practitioners by focusing on how public policies, being implemented in different territorial scales (urban, local, regional, national, and European), can actively contribute to foster territorial cohesion trends in a given territory. This reflective approach provides an opportunity for thinking about what lessons can be learned from past and ongoing experiences and how they can improve future implementation of public policies more effectively and efficiently toward territorial cohesion, since all existing analyses show that at the national level, no European country has achieved territorial cohesion trends over the past decades. As such, this book acts as a valid and useful policy manual that effectively contributes to inverting current territorial exclusion trends at the national level, by highlighting best policy practices and a comprehensive introduction to contemporary thinking about how public policies can play a decisive role in boosting territorial cohesion processes in a given territory.

2023 tacoma advanced technology package: Green Infrastructure Benedetta Giudice,

Gilles Novarina, Angioletta Voghera, 2023-05-23 This book analyses international Green Infrastructure (GI) planning and design strategies. The GI strategy is widely recognized for its multifunctionality (as a tool for ecological, economic and social enhancement) and multiscale. Starting from this assumption, the book intends to implement the concept of GI and blue networks in planning strategies and their linked urban projects. New urban and regional paradigms of the latest years, such as urban sprawl, ecosystem services, biodiversity, urban resilience, climate change and health emergencies, have made it necessary to rethink cities and territories and their related plans and projects. To satisfy these paradigms, worldwide plans and projects have started to focus both on short-term and long-term processes and strategies which integrate environmental, landscape and ecological elements. Chapters 1 and 6 are available open access under a Creative Commons Attribution 4.0 International License via link.springer.com.

2023 tacoma advanced technology package: Border Urbanism Quazi Mahtab Zaman, Greg G. Hall, 2023-03-06 *Border Urbanism* presents a global array of authors' research that tackles the perception, interpretation, and nature of borders from a transdisciplinary perspective. The authors examine ways in which borders attempt to define socially, economically, politically, and historically incompatible systems, from micro neighbourhoods to global macro territories, and how this blurs urban order that results in an absence of cohesion. Their analysis of contextual worldwide settings considers the unique issues and the broad scope of forces that shape borders and separate socioeconomic, political, cultural, and historical polarities. The authors consider ways in which the resulting urban border conditions determine the mobility of goods, resources, and people and how these delineations define relationships that influence geopolitical relationships, socioeconomic transactions, and people's lives at multiple levels. They address the temporal issues defined by a variety of unique urban conditions that result from these lateral thresholds. Each chapter contributes to a critical discourse of the subject of border urbanism and the phenomenon created by separation, demarcation, and segregation as well as by conflict and coexistence. The transdisciplinary approach of *Border Urbanism* ensures that it will be of interest to individuals across a spectrum of professions and disciplines. Professionals such as urban planners, designers, architects, developers, and civil and environmental engineers and students of these disciplines will be particularly interested as will allied professionals and those not traditionally associated with urbanism; these include artists, sociologists, historians, lawyers, politicians, and civic and government leaders. The authors' global perspectives, combined with their expertise in environmental, historical, cultural, social, political, and geographic areas, will appeal to anyone interested in border urbanism and its intersection with these areas.

2023 tacoma advanced technology package: Urban Dynamics in the Post-pandemic Period Enrique Navarro-Jurado, Remedios Larrubia Vargas, Fernando Almeida-García, Juan José Natera Rivas, 2023-09-12 This book offers a unique perspective on urban processes affecting tourist spaces and city centres. Economic, social and environmental uncertainty has been commonplace since March 2019, when mobility slowed down across the globe. The COVID-19 pandemic accelerated trends that have been investigated in urban space for years. The incorporation of technologies, the expansion of tourism and the introduction of policies that in part want to advance sustainability are generating processes of reorganisation of territories that are driving changes. These changes will affect models of city, urbanism and society. This publication is directed to a wide spectrum of people interested in urban processes, tourism and social change in the context of the Post-Pandemic Covid-19. In particular, the book is aimed at researchers, undergraduate and postgraduate students, consultants, public administrations and the public interested in the recent challenges that are affecting developed and developing societies.

2023 tacoma advanced technology package: Beyond the Informal Ninik Suhartini, Paul Jones, 2023-01-01 This book provides a much-needed analysis of the pivotal role of the urban kampung in Indonesia's urbanization process and importantly, provides a deeper understanding of how these communities create their complex socio-physical environments through self-organization. The book challenges the current formal approaches and practices to modern planning in Indonesia where many kampungs are classed as illegal and excluded from city plans. Beyond informality unpacks via three case studies the self-generated planning and development arrangements and mechanisms which occur parallel to processes of formal exclusion, adaptation, negotiation and modification. Kampungs are posited as inseparable urban entities contributing to the complex assemblage of the city and the dynamics of contemporary urban planning and design. In the context of planning and design practice, this book provides a better understanding on how one needs to consider human-scale urbanism to achieve more effective and efficient planning plans and policies in the self-organized city. Even though self-organization by residents comes with its challenges as outlined in the book, formal planning in both Indonesia and other developing countries has much to learn from understanding self-organized settlements (kampung) and informal settlements 'as they are'.

2023 tacoma advanced technology package: Urbicide Fernando Carrión Mena, Paulina Cepeda Pico, 2023-03-23 This book uses the reflection of academics specialized in the urban area of Latin America, Europe and the United States, to initiate a comparative debate of the different dynamics in which Urbicidio expresses itself. The field or focal point of analysis that this publication approaches is the city, but under a new critical perspective of inverse methodology to that has been traditional used. It is about understanding the structural causes of self-destruction to finally thinking better and then going from pessimism to optimism. It is a deep look at the city from an unconventional entrance, because it is about knowing and analyzing what the city loses by the action deployed by own urbanites, both in the field of its production and in the field of its consumption. This suppose that the city does not have an ascending linear sequential evolution in its development but neither in each of its parts in the improvement process, showing the face that commonly not seen but others live. The category used for this purpose is that of Urbicidio or the death of the city, which contributes theoretically and methodologically to the knowledge of the city, as well as to the design of urban policies that neutralize it. In addition, it is worth mentioning that the book has an inclusive view of the authors. For this reason, gender parity, territorial representation and the presence of age groups have been sought.

2023 tacoma advanced technology package: Intelligence for Future Cities Robert Goodspeed, Raja Sengupta, Marketta Kyttä, Christopher Pettit, 2023-07-04 This book contains a selection of the best papers presented at the Computational Urban Planning and Urban Management (CUPUM) conference, held in June 2023 at McGill University in Montreal, Quebec. Major themes of this book are smart cities, urban big data, and shared mobility. 2023 tacoma advanced technology package: Fundamentals of Innovative Sustainable Homes Design and Construction Avi Friedman, 2023-06-26 This book offers ideas and practices on contemporary design concepts and illustrates them with plans and photographs of outstanding examples. Current planning and design modes of dwellings and neighborhoods are facing challenges of philosophy and form. Past approaches no longer sustain new demands and require innovative thinking. The need for a new outlook is propelled by fundamental changes that touch upon environmental, economic and social aspects. The depletion of non-renewable natural resources and climate change are a few of the environmental challenges. Increasing costs of material, labor, land and infrastructure have posed economic challenges with affordability being paramount among them. Social challenges are also drawing the attention of designers, builders and homeowners. Walkable communities, aging in place and multigenerational living are some of the concepts considered. In addition, live-work environments have become part of the economic reality for those who wish to work from home—which has become possible through digital advances. The text would be of interest to scholars working in: architecture, urban planning, and construction.

2023 tacoma advanced technology package: Spatial Justice and Planning Shaoxu Wang, Kai Gu, 2023-07-25 Despite the significance of urban justice in planning research and practice, how just societies and cities can be organised and achieved remains contested. Spatial justice provides an integrative and unifying theory concerning place, policies, people and their interplay, but ambiguities about its practical bases have undermined its application in planning. Through creating and substantiating a new conceptual framework comprising a morphological study, policy analysis and embodiment research, this book crystallises the spatiality of (in)justice and (in)justice of spatiality in the context of social housing redevelopment. Like many countries around the world, social housing in Aotearoa New Zealand is an area of contention, especially at the building and redevelopment stages. Protecting community character and human rights has been used by social housing tenants to resist changes, but the primary focus on material outcomes neglects broadening access to planning processes. Compact, mixed tenure and sustainable (re)developments are regarded as the just built environment, as they enable equal accessibility to all. But there are contradictions between the planned spatiality of justice and individuals' socialised sensory space.

Reconciliation of morphological differentiations in built forms and social cohesion remains a challenging task. This book focuses on the re-examination, integration and transferability of spatial justice. It makes a new contribution to urban justice theory by strengthening spatial justice and planning. Social housing areas are expected to adapt to changing social and economic demands while retaining much-valued established community character. This book also provides practical strategies for tackling complex planning problems in social housing redevelopment.

2023 tacoma advanced technology package: The Topology of Planning Theories Meike Levin-Keitel, Lukas Behrend, 2023-10-24 The book discusses and organizes planning theories in a new way. Building on a foundation in scientific theory, both planning practice and the planning sciences are thereby classified and their inherent importance is organized in terms of knowledge generation. The core of the book is a knowledge-oriented systematization of planning knowledge in the form of planning theories, the topology of planning theories. The target audience of this work are academic as well as practical users from diverse disciplines with spatial impact, such as spatial planning, urban planning, regional planning, landscape planning, geography, urban studies, architecture and landscape architecture.

2023 tacoma advanced technology package: Adaptive Urban Transformation Steffen Nijhuis, Yimin Sun, Eckart Lange, 2023-07-01 This open access book provides a cross-sectoral, integrative and multi-scale design and planning approach for adaptive urban transformation of fast urbanising deltas, taking the Pearl River Delta (China) as a case study. Deltaic areas are among the most promising regions in the world. Their strategic location and superior quality of their soils are core factors supporting both human development and the rise of these regions as global economic hubs. At the same time, however, deltas are extremely vulnerable to multiple threats from both climate change and urbanisation. These include an increased flood risk combined with the resulting loss of ecological and social-cultural values. To ensure a more sustainable future for these areas, spatial strategies are needed to strengthen resilience, i.e. help the systems to cope with their vulnerabilities as well as enhance their capacity to overcome natural and artificial threats. The book provides a unique approach that integrates research in urban landscape systems, territorial governance and visualisation techniques that will help to achieve more integrated and resilient deltas. Based on an assessment of the dynamics of change regarding the transformational cycles of natural and urban landscape elements, eco-dynamic regional design strategies are explored to reveal greater opportunities for the exploitation of natural and social-cultural factors within the processes of urban development.

2023 tacoma advanced technology package: The Elemental Metropolis Qinyi Zhang, 2023-08-04 This book provides a multi-scale reading of the spatial “elements” in which the extensive urbanity in Yangtze River Delta is constructed, and from there an imagination of a new paradigm of urbanization. The urbanization in Yangtze River Delta today is in need of a new interpretation and paradigm. The delta is a territory with city cores but it also has vast dispersed urbanization where the agricultural and non-agricultural activities and spaces are mixed and interlinked, a *desakota* (McGee, 1991). This book attempts to answer a basic question: what is the *desakota* in the Yangtze River Delta made of? The research Horizontal Metropolis led by Prof. Paola Viganò at EPFL, Switzerland focuses on the form of the contemporary city - the fragmentary spatial condition and dispersed urbanity all over the world. The study on Yangtze River delta is part of its research frame.

2023 tacoma advanced technology package: Morphological Regionalization Muzaffer Ali Arat, 2023-06-01 This book is about how to make the method of morphological regionalization, proposed in the early 1960s, more useful and practicable for planning, urban design and architecture. This book is about cities; more precisely, about how cities can be characterized based on the main elements of urban form. It provides a systematic way of description and explanation of the historico-geographical structure of the urban landscape. It offers a step-by-step methodology for the identification of morphological regions as a key tool for planning practice and townscape management. The book is divided in seven parts. The first part is the introduction, motivation, research goal and objectives, and the structure of the book. The second part of the book offers an

overview of urban morphology, urban morphological approaches, the concept of morphological region and its past applications worldwide. The third part is the methodological procedures for the implementation of this morphological approach to cities. The fourth and fifth parts are the implementation of this methodology into two case studies, Istanbul and Antequera. The sixth part offers a discussion of results. And, finally, the seventh part is constituted by a set of conclusions.

2023 tacoma advanced technology package: Urban Development and the Panama Canal Zone Graciela Arosemena Díaz, Almyr Alba, María Sánchez de Stapf, 2023-10-29 The construction of the Panama Canal at the beginning of the twentieth century created an enclave that ran parallel to the interoceanic waterway, controlled by the US government: the Canal Zone. This book aims to understand the implications that Panama Canal Zone urban planning had on human health, natural resources, and biodiversity through the study case of Fort Clayton, highlighting how the sanitary concerns shaped building regulations and the urban landscape of towns. This book highlights the role of North American entomologists and health workers in developing control strategies for diseases transmitted by mosquitoes and how mosquito's ecology determined building regulations that shaped the image of the Canal Zone towns. On the other hand, the book determines the environmental assessment of Fort Clayton, determined by the two fundamental aspects that set on the environmental impact of an urban settlement. The first one is the suitability of the site's location. The second is the urban structure of the adopted city model and its impact on the connectivity of the surrounding forests during the twentieth century. This text is aimed at both undergraduate and postgraduate students, architects, urban planners, historians, and environmental science professionals.

2023 tacoma advanced technology package: Gentrification and Diversity Lidia Katia C. Manzo, 2023-07-20 This book examines lived experiences of making, inhabiting and appropriating space, in relation to the upscale commercial gentrification of the Milan Chinatown. It inquires about the significance of diverse neighborhoods as emerging multicultural spaces? Are we talking about neighborhood entrepreneurs providing services and entertainment to create local urban culture, or are we talking about political/economic forces in the commodification of ethnic and cultural diversity? Starting from these questions, this book uses innovative visual ethnography and critical urban research to understand the relationship between community-based entrepreneurs, local politics, residents' sense of belonging, and patterns of city branding strategies in Milan, the fashion capital of Italy. This book is intended for researchers and students in the fields of sociology, anthropology, urban studies, geography, and urban planning. Additionally, it is appropriate for practitioners in the fields of urban planning, housing policies, and community development.

2023 tacoma advanced technology package: Urban Policy in the Framework of the 2030 Agenda María Ángeles Huete García, Adrián Rodríguez Miranda, Vicente Ugalde, Rafael Merinero Rodríguez, 2023-10-01 The book provides comparative information about the materialization of the 2030 Agenda in urban policy in ten countries located in Europe and Latin America. The Declaration of Quito is the starting point for the implementation of SDGs into public policies in urban areas. However, there are fewer efforts to understand the impact that the 2030 Agenda and, specifically, the instruments developed for its application in cities. The information of each country is presented in relation to two aspects: the construction of a public policy style in each country and the results and impacts on urban public policies implemented in specific cities within the national frameworks. The first means the emergence of a public policy framework and its materialization in public policy instruments. In this regard, the book raises the following questions: To what extent have the SDGs come to generate a common framework for cities in the countries? And how Urban SDGs are translated to national urban policies? The second, results and impacts at the local level, is related to two aspects: a) substantive: the goals of the policy and b) procedural: management aspects related to the policy design, governance, and institutional capacity building.

2023 tacoma advanced technology package: Conserving and Managing Historical Urban Landscape Xiaoxi Li, Ye Zhang, 2023-01-01 This book focuses on urban morphology and its application to urban conservation and management. The rapid disappearance of historical urban

landscapes, especially in developing countries, is largely attributed to the lack of historic awareness and broad-brush demolition and redevelopment in urban development. The book provides a new, integrated morphological approach that enables fine-grained and cross-scale examination of urban form based on both its historicity and socio-economic potential, with the aims of informing more responsive and context-specific conservation and management of historical urban landscapes. The robustness of this new approach and the feasibility of its application to urban conservation practice are tested and demonstrated by three case studies in drastically different cultural contexts, namely Ludlow, a medieval town in the UK, Chinatown in Singapore and a historic quarter in Nanjing, China. Combining historico-geographical and configurational approaches, the book also makes a significant breakthrough in terms of coordinating and synthesizing different traditions of urban morphology, which has been a key challenge to this field over the past decades. In addition, by using multi-source data, ranging from conventional cartographic maps to computer-generated and open online data, the integrated approach innovatively relates qualitative and quantitative aspects of urban form and links the qualitative and quantitative analyses of formal structure. As an interdisciplinary study merging geography, urban history, urban planning and design, this book is to be primarily used as a reference book for graduate students and scholars in various fields who are interested in urban form and urban conservation and management. In addition, it offers practitioners in urban planning and design a useful tool for managing changes in historical urban landscapes. Lastly, it contributes to developing a common platform to facilitate dialogues among various stakeholders and participants in urban conservation practice.

2023 tacoma advanced technology package: *Cycling Through the Pandemic* Nathalie Ortar, Patrick Rérat, 2023-11-16 This open access book provides insight on how the tactical urbanism has the capacity to influence change in mobility practices such as cycling. COVID-19 crisis prompted the public authorities to rethink the use of public space in order to develop means of transport that are both efficient and adapted to the health context and their effects on cycling practices in Europe, North, and South America. Its contributors collectively reveal and evidence through policies analysis, mapping, and innovative qualitative analysis bridging video and interviews, how those new infrastructures and policies can be a trigger for change in a context of mobility transition. This book provides an important element on the way local authorities can act in a quicker and more agile way. While some decisions are specific to the context of the beginning of the pandemic, the analysis offers lessons on the way to implement the transition toward a low-carbon mobility, on the importance of processes based on trials and errors, on the political stakes of reallocating road space.

2023 tacoma advanced technology package: *Mathematical Introduction To Control Theory, A (Third Edition)* Shlomo Engelberg, 2024-04-29 The 3rd edition strikes a nice balance between mathematical rigor and engineering oriented applications, helping students to understand the mathematical and engineering aspects of control theory. The book makes effective use of the tools provided by MATLAB® (and includes material about using the tools provided by the Python® programming language) in the design and analysis of control systems without allowing the computer-based tools to substitute for knowledge of control theory. The examples in the text are carefully designed to develop the student's intuition — in both mathematics and engineering. With over 90 solved homework problems and about 200 figures, this invaluable title will benefit junior and senior level university students in engineering.

2023 tacoma advanced technology package: Developing Faculty Learning Communities at Two-Year Colleges Susan Sipple, Robin Lightner, 2023-07-03 This book introduces community college faculty and faculty developers to the use of faculty learning communities (FLCs) as a means for faculty themselves to investigate and surmount student learning problems they encounter in their classrooms, and as an effective and low-cost strategy for faculty developers working with few resources to stimulate innovative teaching that leads to student persistence and improved learning outcomes. Two-year college instructors face the unique challenge of teaching a mix of learners, from the developmental to high-achievers, that requires using a variety of instructional strategies and techniques. Even the most experienced teachers can find this diversity demanding. Faculty developers at many two-year colleges still rely solely on the one-day workshop model that, while useful, rarely results in sustained student-centered changes in pedagogy or the curriculum, and may not be practicable for the growing cohort of part-time faculty members. By linking work in the classroom with scholarship and reflection, FLCs provide participants with a sense of renewed engagement and stimulate collegial exploration of ways to achieve educational excellence. FLCs are usually faculty-instigated and cross-disciplinary, and comprise groups of six to fifteen faculty that work collaboratively through regular meetings over an extended period of time to promote research and an exchange of experiences, foster community, and develop the scholarship of teaching. FLCs alleviate burnout and isolation, promote the development, testing, and peer review of new classroom strategies or technologies, and lead to the reenergizing and professionalization of teachers. This book introduces the reader to FLCs and to the Scholarship of Teaching and Learning, offering examples of application in two-year colleges. Individual chapters describe, among others, an FLC set up to support course redesign; an "Adjunct Connectivity FLC" to integrate part-time faculty within a department and collaborate on the curriculum; a cross-disciplinary FLC to promote student self-regulated learning, and improve academic performance and persistence; a critical thinking FLC that sought to define critical thinking in separate disciplines, examine interdisciplinary cross-over of critical thinking, and measure critical thinking more accurately; an FLC that researched the transfer of learning and developed strategies to promote students' application of their learning across courses and beyond the classroom. Each chapter describes the formation of its FLC, the processes it engaged in, what worked and did not, and the outcomes achieved. Just as when college faculty fail to remain current in their fields, the failure to engage in continuing development of teaching skills, will equally lead teaching and learning to suffer. When two-year college administrators restrain scholarship and reflection as inappropriate for the real work of the institution they are in fact hindering the professionalization of their teaching force that is essential to institutional mission and student success. When FLCs are supported by leaders and administrators, and faculty learn that collaboration and peer review are valued and even expected as part of being a teaching professional, they become intrinsically motivated and committed to collaboratively solving problems, setting the institution on a path to becoming a learning organization that is proactive and adept at navigating change.
