2023 waste management open picks: The Second Life of Tiger Woods Michael Bamberger, 2020-03-31 It's one of the greatest comebacks of all time. And for Tiger Woods, getting back to the winner's circle was only half the story. Written by a New York Times bestselling author and reporter who "knows the world of professional golf...like few others" (The Wall Street Journal) comes "the most insightful and evenhanded book written yet about one of the signature athletes of the last twenty-five years" (Booklist, starred review). Tiger Woods's long descent into a personal and professional hell reached bottom in the early hours of Memorial Day in 2017. Woods's DUI arrest that night came on the heels of a desperate spinal surgery, just weeks after he told close friends he might never play tournament golf again. His mug shot and alarming arrest video were painful to look at and, for Woods, a deep humiliation. The former paragon of discipline now found himself hopelessly lost and out of control, exposed for all the world to see. That episode could have marked the beginning of Tiger's end. It proved to be the opposite. Instead of sinking beneath the public disgrace of drug abuse and the private despair of a battered and ailing body, Woods embarked on the long road to redeeming himself. In The Second Life of Tiger Woods, Michael Bamberger, who has covered Woods since the golfer was an amateur, draws upon his deep network of sources inside locker rooms, caddy yards, clubhouses, fitness trailers, and back offices to tell the true and inspiring story of the legend's return. Packed with new information and graced by insight, Bamberger's story reveals how this iconic athlete clawed his way back to the top. This is a "gripping" (Kirkus Reviews) and intimate portrait of a man who has spent his life in front of the camera but has done his best to make sure he was never really known. Here is Tiger, barefoot, in handcuffs, showing a police officer a witty and self-deprecating side of himself that the public never sees. Here is Tiger on the verge of tears with his children at the British Open. Here is Tiger trying to express his gratitude to his mother at a ceremony at the Rose Garden. In these pages, Tiger is funny, cold, generous, self-absorbed, inspiring—and real. The Second Life of Tiger Woods is not only the saga of an exceptional man but also a celebration of second chances. Bamberger's bracingly honest book is about what Tiger Woods did, and about what any of us can do, when we face our demons head-on.

2023 waste management open picks: *The Orphans of Davenport: Eugenics, the Great Depression, and the War over Children's Intelligence* Marilyn Brookwood, 2021-07-27 The fascinating—and eerily timely—tale of the forgotten Depression-era psychologists who launched the modern science of childhood development. “Doomed from birth” was how psychologist Harold Skeels described two toddler girls at the Iowa Soldiers’ Orphans’ Home in Davenport, Iowa, in 1934. Their IQ scores, added together, totaled just 81. Following prevailing eugenic beliefs of the times, Skeels and his colleague Marie Skodak assumed that the girls had inherited their parents’ low intelligence and were therefore unfit for adoption. The girls were sent to an institution for the “feebleminded” to be cared for by “moron” women. To Skeels and Skodak’s astonishment, under the women’s care, the children’s IQ scores became normal. Now considered one of the most important scientific findings of the twentieth century, the discovery that environment shapes children’s intelligence was also one of the most fiercely contested—and its origin story has never been told. In *The Orphans of Davenport*, psychologist and esteemed historian Marilyn Brookwood chronicles how a band of young psychologists in 1930s Iowa shattered the nature-versus-nurture debate and overthrew long-accepted racist and classist views of childhood development. Transporting readers to a rural Iowa devastated by dust storms and economic collapse, Brookwood reveals just how profoundly unlikely it was for this breakthrough to come from the Iowa Child Welfare Research Station. Funded by the University of Iowa and the Rockefeller Foundation, and modeled on America’s experimental agricultural stations, the Iowa Station was virtually unknown, a backwater compared to the renowned psychology faculties of Stanford, Harvard, and Princeton. Despite the challenges they faced, the Iowa psychologists replicated increased intelligence in thirteen more “retarded” children. When Skeels published their incredible work, America’s leading psychologists—eugenicists all—attacked and condemned his conclusions. The loudest critic was Lewis M. Terman, who advocated for forced sterilization of low-intelligence women and whose own widely accepted IQ test was threatened by the Iowa research. Terman and his opponents insisted that intelligence was hereditary, and their prestige ensured that the research would be ignored for decades. Remarkably, it was not until the 1960s that a new generation of psychologists accepted environment’s role in intelligence and helped launch the modern field of developmental neuroscience.. Drawing on prodigious archival research, Brookwood reclaims the Iowa researchers as intrepid heroes and movingly recounts the stories of the orphans themselves, many of whom later credited the psychologists with giving them the opportunity to forge successful lives. A radiant story of the power and promise of science to better the lives of us all, *The Orphans of Davenport* unearths

an essential history at a moment when race science is dangerously resurgent.

2023 waste management open picks: Reeling Through Life Tara Ison, 2015-01-01 Reeling Through Life: How I Learned to Live, Love, and Die at the Movies looks at how film shapes identity. Through ten cleverly constructed essays, Ison explores how a lifetime of movie-watching has, for better or worse, taught her how to navigate the world and how to grapple with issues of career, family, faith, illness, sex, and love. Cinema is a universal cultural experience, one that floods our senses with images and sounds, a powerful force that influences our perspective on the world around us. Ison discusses the universal aspects of film as she makes them personal, looking at how certain films across time shaped and molded who she has become. Drawing on a wide ranging catalog of films, both cult and classic, popular and art-house, Reeling Through Life examines how cinema shapes our views on how to make love, how to deal with mental illness, how to be Jewish, how to be a woman, how to be a drunk, and how to die with style. Rather than being a means of escape or object of mere entertainment, Ison posits that cinema is a more engaging form of art, a way to slip into other identities and inhabit other realities. A way to orient oneself into the world. Reeling Through Life is a compelling look at one popular art form and how it has influenced our identities in provocative and important ways.

2023 waste management open picks: Picking Up Robin Nagle, 2013-03-19 A “gripping” behind-the-scenes look at New York's sanitation workers by an anthropologist who joined the force (Robert Sullivan, author of Rats). America's largest city generates garbage in torrents—11,000 tons from households each day on average. But New Yorkers don't give it much attention. They leave their trash on the curb or drop it in a litter basket, and promptly forget about it. And why not? On a schedule so regular you could almost set your watch by it, someone always comes to take it away. But who, exactly, is that someone? And why is he—or she—so unknown? In Picking Up, the anthropologist Robin Nagle introduces us to the men and women of New York City's Department of Sanitation and makes clear why this small army of uniformed workers is the most important labor force on the streets. Seeking to understand every aspect of the Department's mission, Nagle accompanied crews on their routes, questioned supervisors and commissioners, and listened to story after story about blizzards, hazardous wastes, and the insults of everyday New Yorkers. But the

more time she spent with the DSNY, the more Nagle realized that observing wasn't quite enough—so she joined the force herself. Driving the hulking trucks, she obtained an insider's perspective on the complex kinships, arcane rules, and obscure lingo unique to the realm of sanitation workers. Nagle chronicles New York City's four-hundred-year struggle with trash, and traces the city's waste-management efforts from a time when filth overwhelmed the streets to the far more rigorous practices of today, when the Big Apple is as clean as it's ever been. "An intimate look at the mostly male work force as they risk injury and endure insult while doing the city's dirty work [and] a fascinating capsule history of the department." —Publishers Weekly "[Nagle's] passion for the subject really comes to life." —The New York Times "Evokes the physical and psychological toll of this dangerous, filthy, necessary work." —Nature "Nagle joins the likes of Jane Jacobs and Jacob Riis, writers with the chutzpah to dig deep into the Rube Goldberg machine we call the Big Apple and emerge with a lyrical, clear-eyed look at how it works." —Mother Jones

2023 waste management open picks: Waste Catherine Coleman Flowers, 2020-11-17 The MacArthur grant-winning environmental justice activist's riveting memoir of a life fighting for a cleaner future for America's most vulnerable A Smithsonian Magazine Top Ten Best Science Book of 2020 Catherine Coleman Flowers, a 2020 MacArthur "genius," grew up in Lowndes County, Alabama, a place that's been called "Bloody Lowndes" because of its violent, racist history. Once the epicenter of the voting rights struggle, today it's Ground Zero for a new movement that is also Flowers's life's work—a fight to ensure human dignity through a right most Americans take for granted: basic sanitation. Too many people, especially the rural poor, lack an affordable means of disposing cleanly of the waste from their toilets and, as a consequence, live amid filth. Flowers calls this America's dirty secret. In this "powerful and moving book" (Booklist), she tells the story of systemic class, racial, and geographic prejudice that foster Third World conditions not just in Alabama, but across America, in Appalachia, Central California, coastal Florida, Alaska, the urban Midwest, and on Native American reservations in the West. In this inspiring story of the evolution of an activist, from country girl to student civil rights organizer to environmental justice champion at Bryan Stevenson's Equal Justice Initiative, Flowers shows how sanitation is becoming too big a problem to ignore as climate change brings sewage to more backyards—not only those of poor minorities.

2023 waste management open picks: *Mathematics for Machine Learning* Marc Peter Deisenroth, A. Aldo Faisal, Cheng Soon Ong, 2020-04-23 The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix decompositions, vector calculus, optimization, probability and statistics. These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics. This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the mathematical concepts with a minimum of prerequisites. It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding.

Are they understandable by reference to underlying abnormalities of biochemistry or brain function? In what ways are they similar to and in what ways do they differ from anorexia nervosa and bulimia nervosa in females? This book will be of interest to a wide variety of people—physicians, psychologists, nurses, social workers, occupational therapists, nutritionists, educators, and all others who may be interested for personal or professional reasons.

2023 waste management open picks: The Participatory Museum Nina Simon, 2010 Visitor participation is a hot topic in the contemporary world of museums, art galleries, science centers, libraries and cultural organizations. How can your institution do it and do it well? The Participatory Museum is a practical guide to working with community members and visitors to make cultural institutions more dynamic, relevant, essential places. Museum consultant and exhibit designer Nina Simon weaves together innovative design techniques and case studies to make a powerful case for participatory practice. Nina Simon's new book is essential for museum directors interested in experimenting with audience participation on the one hand and cautious about upending the tradition museum model on the other. In concentrating on the practical, this book makes implementation possible in most museums. More importantly, in describing the philosophy and rationale behind participatory activity, it makes clear that action does not always require new technology or machinery. Museums need to change, are changing, and will change further in the future. This book is a helpful and thoughtful road map for speeding such transformation. -Elaine Heumann Gurian, international museum consultant and author of Civilizing the Museum This book is an extraordinary resource. Nina has assembled the collective wisdom of the field, and has given it her own brilliant spin. She shows us all how to walk the talk. Her book will make you want to go right out and start experimenting with participatory projects. -Kathleen McLean, participatory museum designer and author of Planning for People in Museum Exhibitions I predict that in the future this book will be a classic work of museology. --Elizabeth Merritt, founding director of the Center for the Future of Museums

Forty-four-year-old Alice Holtzman is stuck in a dead-end job, bereft of family, and now reeling from the unexpected death of her husband. Alice has begun having panic attacks whenever she thinks about how her life hasn't turned out the way she dreamed. Even the beloved honeybees she raises in her spare time aren't helping her feel better these days. In the grip of a panic attack, she nearly collides with Jake--a troubled, paraplegic teenager with the tallest mohawk in Hood River County--while carrying 120,000 honeybees in the back of her pickup truck. Charmed by Jake's sincere interest in her bees and seeking to rescue him from his toxic home life, Alice surprises herself by inviting Jake to her farm. And then there's Harry, a twenty-four-year-old with debilitating social anxiety who is desperate for work. When he applies to Alice's ad for part-time farm help, he's shocked to find himself hired. As an unexpected friendship blossoms among Alice, Jake, and Harry, a nefarious pesticide company moves to town, threatening the local honeybee population and illuminating deep-seated corruption in the community. The unlikely trio must unite for the sake of the bees--and in the process, they just might forge a new future for themselves. 2023 waste management open picks: *Our Shared Storm* Andrew Dana Hudson, 2022-04-05 Through speculative fiction, five interlocking novelettes explore the possible realities of our climate future. What is the future of our climate? Given that our summers now regularly feature Arctic heat waves and wildfire blood skies, polar vortex winters that reach all the way down to Texas, and “100-year” storms that hit every few months, it may seem that catastrophe is a done deal. As grim as things are, however, we still have options. Combining fiction and nonfiction and employing speculative tools for scholarly purposes, *Our Shared Storm* explores not just one potential climate future but five possible outcomes dependent upon our actions today. Written by speculative-fiction writer and sustainability researcher Andrew Dana Hudson, *Our Shared Storm* features five overlapping fictions to employ a futurist technique called “scenarios thinking.” Rather than try to predict how history will unfold—picking one out of many unpredictable and contingent branching paths—it instead creates a set of futures that represent major trends or counterposed possibilities, based on a set of climate-modeling scenarios known as the Shared Socioeconomic Pathways (SSPs). The setting is the year 2054, during the Conference of the Parties global climate negotiations (a.k.a., The COP) in Buenos Aires, Argentina. Each story features a common cast of characters, but with events unfolding differently for them—and human society—in each alternate universe. These five scenarios highlight the political, economic, and cultural possibilities of futures where investments in climate adaptation and mitigation promised today have been successfully completed, kicked down the road, or abandoned altogether. From harrowing to hopeful, these stories highlight the choices we must make to stabilize the planet. *Our Shared Storm* is an experiment in deploying practice-based research methods to explore the opportunities and challenges of using climate fiction to engage scientific and academic frameworks.

From the start, her life is marked by extraordinary events, for the ripples of the Great War are still being felt, even as the Spanish flu arrives on the shores of her South American homeland almost at the moment of her birth. Through her father’s prescience, the family will come through that crisis unscathed, only to face a new one as the Great Depression transforms the genteel city life she has known. Her family loses everything and is forced to retreat to a wild and beautiful but remote part of the country. There, she will come of age, and her first suitor will come calling. She tells her story in the form of a letter to someone she loves above all others, recounting times of devastating heartbreak and passionate affairs, poverty and wealth, terrible loss and immense joy.
