22 april in history: *The Genius of Earth Day* Adam Rome, 2013-04-16 The first Earth Day is the most famous little-known event in modern American history. Because we still pay ritual homage to the planet every April 22, everyone knows something about Earth Day. Some people may also know that Earth Day 1970 made the environmental movement a major force in American political life. But no one has told the whole story before. The story of the first Earth Day is inspiring: it had a power, a freshness, and a seriousness of purpose that are difficult to imagine today. Earth Day 1970 created an entire green generation. Thousands of Earth Day organizers and participants decided to devote their lives to the environmental cause. Earth Day 1970 helped to build a lasting eco-infrastructure—lobbying organizations, environmental beats at newspapers, environmental-studies programs, ecology sections in bookstores, community ecology centers. In *The Genius of Earth Day*, the prizewinning historian Adam Rome offers a compelling account of the rise of the environmental movement. Drawing on his experience as a journalist as well as his expertise as a scholar, he explains why the first Earth Day was so powerful, bringing one of the greatest political events of the twentieth century to life.

22 april in history: *Legal History Matters* Amanda Whiting, Ann O'Connell, 2020-11-03 As a field of study, legal history has an unsteady place in Australian law schools yet academic research and writing in the field of legal history and at the intersections of the disciplines of 'law' and 'history' is undergoing something of a renaissance, with rich and vibrant new works regularly appearing in specialist journals and scholarly monographs. This collection seeks to reinvigorate the study of history within the law school curriculum, by showcasing what students of the law can achieve when, addressing topics from the use of Magna Carta as history and precedent in sixteenth-century England to the political manoeuvres behind the failed impeachment of President Bill Clinton in late twentieth-century America, they seek to understand legal processes and institutions historically. The volume comprises outstanding legal history papers authored by graduate (final year JD) students in the Melbourne Law School. This collection is dedicated to two women who championed the teaching of legal history at the Melbourne Law School in the 1960s—Dr Ruth Campbell and Mrs Betty Hayes.

22 april in history: *Nationalism and the Politicization of History in the Former Yugoslavia* Gorana Ognjenovic, Jasna Jozelic, 2021-03-19 "This book is very timely: the instrumentalization of history for political goals has become a pressing issue and worrisome feature of many polities, to the

point of challenging even the most consolidated democracies. Focusing on Yugoslavia's fragile successor states, the authors explore plurifold analytical levels, including local, regional, transnational, European and global perspectives. The authors comprehensively demonstrate how politicizing history, in the postwar and postcommunist societies of what was once Yugoslavia, has prevented both reconciliation and democratization." —Sabine Rutar, Leibniz Institute for East and Southeast European Studies, Germany "Ognjenovic and Jozelic focus here on the former Yugoslavia before and after its fragmentation to explore and evaluate the various uses of histories by nationalists, both those who promoted 'federal nationalism' and those who peddle specific local nationalisms in successor states. The book deals specifically with the Western Balkans, but these developments have their parallels in many other parts of the world, and the book will be useful well beyond the region on which the study is based." —Paul Mojzes, Professor Emeritus, Rosemont College, USA "The former Yugoslavia has become a battlefield for the 'Memory Wars', in spite of the wealth of judicially established facts and available evidences gathered about the atrocities in the region, and various initiatives aimed at dealing with the past and efforts at transitional justice. Focusing on three periods of Yugoslav history – the Second World War, socialist Yugoslavia and the Yugoslav wars of 1991–2001 – the contributors show that despite these efforts to deal with the past, sustainable peace and reconciliation across ethnic and religious groups remain a distant aim." —Marijana Toma, Center for Cultural Decontamination, Serbia This book analyzes how nationalists in the former Yugoslavia have politicized history to further their political agendas, retaining and prolonging conflict among different cultural and religious groups, and impeding the process of lasting reconciliation. It explores how narratives have been (mis)used, drawing on examples from all of the former Yugoslav republics. With contributors from a range of disciplinary backgrounds, it provides a vital assessment of how nationalists have attempted to (re)shape public collective memory and relativize facts.

22 april in history: *The Limits of Peacekeeping: Volume 4, The Official History of Australian Peacekeeping, Humanitarian and Post-Cold War Operations* Jean Bou, Bob Breen, David Horner, Garth Pratten, Miesje de Vogel, 2018-10-10 The Limits of Peacekeeping highlights the Australian government's peacekeeping efforts in Africa and the Americas from 1992 to 2005. Changing world power structures and increased international cooperation saw a boom in Australia's peacekeeping operations between 1991 and 1995. The initial optimism of this period proved to be misplaced, as the limits of the United Nations and the international community to resolve deep-seated problems became clear. There were also limits on how many missions a middle-sized country like Australia could support. Restricted by the size of the armed forces and financial and geographic constraints, peacekeeping was always a secondary task to ensuring the defence of Australia. Faith in the effectiveness of peacekeeping reduced significantly, and the election of the Howard Coalition Government in 1996 confined peacekeeping missions to the near region from 1996–2001. This volume is an authoritative and compelling history of Australia's changing attitudes towards peacekeeping.

22 april in history: *A History of Stepfamilies in Early America* Lisa Wilson, 2014-10-06

Stepfamilies are not a modern phenomenon, but despite this reality, the history of stepfamilies in America has yet to be fully explored. In the first book-length work on the topic, Lisa Wilson examines the stereotypes and actualities of colonial stepfamilies and reveals them to be important factors in early United States domestic history. Remarriage was a necessity in this era, when war and disease took a heavy toll, all too often leading to domestic stress, and cultural views of stepfamilies during this time placed great strain on stepmothers and stepfathers. Both were seen either as unfit substitutes or as potentially unstable influences, and nowhere were these concerns stronger than in white middle-class families, for whom stepparents presented a paradox. Wilson shares the stories of real stepfamilies in early New England, investigating the relationship between prejudice and lived experience, and, in the end, offers a new way of looking at family units throughout history and the cultural stereotypes that still affect stepfamilies today.

22 april in history: *Charles Darwin, Geologist* Sandra Herbert, 2005 Pleasure of imagination.... I a geologist have illdefined notion of land covered with ocean, former animals, slow force cracking surface &c truly poetical.--from Charles Darwin's Notebook M, 1838 The early nineteenth century was a golden age for the study of geology. New discoveries in the field were greeted with the same enthusiasm reserved today for advances in the biomedical sciences. In her long-awaited account of Charles Darwin's intellectual development, Sandra Herbert focuses on his geological training, research, and thought, asking both how geology influenced Darwin and how Darwin influenced the science. Elegantly written, extensively illustrated, and informed by the author's prodigious research in Darwin's papers and in the nineteenth-century history of earth sciences, *Charles Darwin, Geologist* provides a fresh perspective on the life and accomplishments of this exemplary thinker. As Herbert reveals, Darwin's great ambition as a young scientist--one he only partially realized--was to create a simple geology based on movements of the earth's crust. (Only one part of his scheme has survived in close to the form in which he imagined it: a theory explaining the structure and distribution of coral reefs.) Darwin collected geological specimens and took extensive notes on geology during all of his travels. His grand adventure as a geologist took place during the circumnavigation of the earth by H.M.S. Beagle (1831-1836)--the same voyage that informed his magnum opus, *On the Origin of Species*. Upon his return to England it was his geological findings that first excited scientific and public opinion. Geologists, including Darwin's former teachers, proved a receptive audience, the British government sponsored publication of his research, and the general public welcomed his discoveries about the earth's crust. Because of ill health, Darwin's years as a geological traveler ended much too soon: his last major geological fieldwork took place in Wales when he was only thirty-three. However, the experience had been transformative: the methods and hypotheses of Victorian-era geology, Herbert suggests, profoundly shaped Darwin's mind and his scientific methods as he worked toward a full-blown understanding of evolution and natural selection.

22 april in history: *The Federalist Papers* Alexander Hamilton, John Jay, James Madison, 2018-08-20 Classic Books Library presents this brand new edition of "The Federalist Papers", a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. "The Federalist", as it was previously known, was constructed by American statesman Alexander Hamilton, and was intended to catalyze the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755-1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800 and founded the Federalist Party, the system that governed the nation's finances. His contributions to the Constitution and leadership made a significant and lasting impact on the early development of the nation of the United States.

22 april in history: *Phoenix Rising* Donald G. Lett, Donald G Lett Jr, 2008-02 In an age when the supply of gasoline to feed this modern American society has become both more expensive and more scarce questions are being pondered. Inquires like, 'How can a modern society scale back its dependence on gasoline as a motive source?' 'Are there genuine alternative power sources?' 'Are they the answer to a growing crisis?' Recent announcements of hybrids like those from Honda, Toyota, and Ford have really brought attention to this issue. Hybrids that use both gasoline engines and electric motors. Really, though, alternative power sources have been around for as long as the automobile has been. The battle between and among the steam car, the electric and the gas car was fought out in the first couple of decades of the twentieth century. This book explores the ins and outs of that battle. A struggle from which the gasoline car emerged completely victorious. To such an extent that steam cars and electric cars virtually disappeared from the scene for many decades. We will look over all three alternatives, exploring their advantages and disadvantages. We will also look over the obstacles to the steamers and the electrics. Barriers that still exist to a certain extent. Handicaps that caused their disappearance in the first place.

22 april in history: *God Is!* Dr. Jo Anna c Watson, 2016-01-05 This generation has seen more scientific discoveries and an increase in greater intellectual knowledge than ever before. As a result, a worldview has emerged that puts its faith in human potential, intelligence, and self-gratification rather than in God. This generation is also witnessing a greater increase in biblical prophecy being fulfilled along with an increase of supernatural phenomenon. Is it possible that God, because of His extreme love for humanity, is zealously declaring that He is the Creator who holds all power and authority over life, death, time, and seasons? Is it possible that this may be the last generation before our Messiah returns? Each of us has a worldview, and that worldview is very important because it determines our behavior. Our behavior, which influences how we think, feel, and act, is

guided by what we believe to be true about God. Such truth is very important because it affects our goals, relationships, our peace of mind, and our destiny, as well as the destiny of our nations. It is my desire to posit that truth is a personal knowledge of God and the truths in the Bible are relevant today, for it has all the answers to life, death, time, and our future. What you believe about God and the Bible will determine your destiny. Only dare to believe!
