360 physical therapy maricopa az: The Last Children's Plague Richard J. Altenbaugh, 2015-09-16 Poliomyelitis, better known as polio, thoroughly stumped the medical science community. Polio's impact remained highly visible and sometimes lingered, exacting a priceless physical toll on its young victims and their families as well as transforming their social worlds. This social history of infantile paralysis is plugged into the rich and dynamic developments of the United

States during the first half of the twentieth century. Children became epidemic refugees because of anachronistic public health policies and practices. They entered the emerging, clinical world of the hospital, rupturing physical and emotional connections with their parents and siblings. As they underwent rehabilitation, they created ward cultures. They returned home to occasionally find hostile environments and always discover changed relationships due to their disabilities. The changing concept of the child, from an economic asset to an emotional commitment, medical advances, and improved sanitation policies led to significant improvements in child health and welfare. This study, relying on published autobiographies, memoirs, and oral histories, captures the impact of this disease on children's personal lives, encompassing public-health policies, hospitalization, philanthropic and organizational responses, physical therapy, family life, and schooling. It captures the anger, frustration, and terror not only among children but parents, neighbors, and medical professionals alike.

360 physical therapy maricopa az: No Reserve Letitia Frye, 2020-04-23 No Reserve is your guide to shattering the ceiling you've built on your dreams by taking risks on yourself and your passions. Its eleven strategies for removing the reserve from your life—or dispensing with any minimum conditions for taking action and giving of yourself—will enable you to live with unlimited joy, success, optimism, and a fearless generosity. These strategies will not only transform your life for the better, but they will also enable you to make impressions on the lives of others, moving the needle of humanity toward the greater good. Life is like an auction: you get your best returns if you don't set a reserve on it. The foremost "auctiontainer" who works with premier nonprofits such as St. Jude Children's Research Hospital, Alice Cooper's Solid Rock, and the Make-A-Wish Foundation®, Letitia Frye knows how important it is to designate auctions as "no reserve," or without a minimum bid. What's more, she's learned how crucial it is to approach life this way as well. When there is no perceived limitation, there is room for chance—as in, unlimited opportunities for success. Having worked her way to the top of a male-dominated industry, left a turbulent marriage to build a high-profile career as a single mom, suffered the devastating losses of her ex-husband and her plus-one child, and survived a traumatic brain injury, Letitia has bounced back from tragedy and beaten the odds multiple times and emerged stronger, more confident, and more successful. In No Reserve, she shares eleven key strategies that will help readers stop limiting themselves in all their endeavors—their career, their relationships, and their personal growth. As readers will discover, you can have everything you want in life, but you have to stop looking for opportunities to come to you, or for the road suddenly to become easier. Oftentimes, you have to make your own path: do the work before getting paid for it, create your own network by mentoring others, and give generously of yourself when you think you have little or nothing to offer. By implementing these and other principles, you will learn to build an authentic, absolute life in which you create the value you deserve.

360 physical therapy maricopa az: Volume Control David Owen, 2019-10-29 The surprising science of hearing and the remarkable technologies that can help us hear better Our sense of hearing makes it easy to connect with the world and the people around us. The human system for processing sound is a biological marvel, an intricate assembly of delicate membranes, bones,

receptor cells, and neurons. Yet many people take their ears for granted, abusing them with loud restaurants, rock concerts, and Q-tips. And then, eventually, most of us start to go deaf. Millions of Americans suffer from hearing loss. Faced with the cost and stigma of hearing aids, the natural human tendency is to do nothing and hope for the best, usually while pretending that nothing is wrong. In *Volume Control*, David Owen argues this inaction comes with a huge social cost. He demystifies the science of hearing while encouraging readers to get the treatment they need for hearing loss and protect the hearing they still have. Hearing aids are rapidly improving and becoming more versatile. Inexpensive high-tech substitutes are increasingly available, making it possible for more of us to boost our weakening ears without bankrupting ourselves. Relatively soon, physicians may be able to reverse losses that have always been considered irreversible. Even the insistent buzz of tinnitus may soon yield to relatively simple treatments and techniques. With wit and clarity, Owen explores the incredible possibilities of technologically assisted hearing. And he proves that ears, whether they're working or not, are endlessly interesting.

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Medication-Assisted Treatment for Opioid Use Disorder, 2019-06-16 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist—like evidence-based medications—are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.
