100 questions and answers about hiv and aids pdf: HIV and the Blood Supply Institute of

Medicine, Committee to Study HIV Transmission Through Blood and Blood Products, 1995-10-05 During the early years of the AIDS epidemic, thousands of Americans became infected with HIV through the nation's blood supply. Because little reliable information existed at the time AIDS first began showing up in hemophiliacs and in others who had received transfusions, experts disagreed about whether blood and blood products could transmit the disease. During this period of great uncertainty, decision-making regarding the blood supply became increasingly difficult and fraught with risk. This volume provides a balanced inquiry into the blood safety controversy, which involves private sexual practices, personal tragedy for the victims of HIV/AIDS, and public confidence in America's blood services system. The book focuses on critical decisions as information about the danger to the blood supply emerged. The committee draws conclusions about what was done—and recommends what should be done to produce better outcomes in the face of future threats to blood safety. The committee frames its analysis around four critical areas: Product treatment—Could effective methods for inactivating HIV in blood have been introduced sooner? Donor screening and referral—including a review of screening to exclude high-risk individuals. Regulations and recall of contaminated blood—analyzing decisions by federal agencies and the private sector. Risk communication—examining whether infections could have been averted by better communication of the risks.

100 questions and answers about hiv and aids pdf: Scaling Up Treatment for the Global AIDS Pandemic Institute of Medicine, Board on Global Health, Committee on Examining the Probable Consequences of Alternative Patterns of Widespread Antiretroviral Drug Use in Resource-Constrained Settings, 2004-11-24 An estimated forty million people carry the human immunodeficiency virus (HIV), and five million more become newly infected annually. In recent years, many HIV-infected patients in wealthy nations have enjoyed significantly longer, good-quality lives as a result of antiretroviral therapy (ART). However, most infected individuals live in the poorest regions of the world, where ART is virtually nonexistent. The consequent death toll in these regions—especially sub-Saharan Africa—is begetting economic and social collapse. To inform the multiple efforts underway to deploy antiretroviral drugs in resource-poor settings, the Institute of Medicine committee was asked to conduct an independent review and assessment of rapid scale-up ART programs. It was also asked to identify the components of effective implementation programs. At the heart of the committee's report lie five imperatives: Immediately introduce and scale up ART programs in resource-poor settings. Devise strategies to ensure high levels of patient adherence to complicated treatment regimens. Rapidly address human-resource shortages to avoid the failure of program implementation. Continuously monitor and evaluate the programs to form the most effective guidelines and treatment regimens for each population. Prepare to sustain ART for decades.

Should communities have the option of giving drug users sterile needles or bleach for cleaning needs in order to reduce the spread of HIV? Does needle distribution worsen the drug problem, as opponents of such programs argue? Do they reduce the spread of other serious diseases, such as hepatitis? Do they result in more used needles being carelessly discarded in the community? The panel takes a critical look at the available data on needle exchange and bleach distribution programs, reaches conclusions about their efficacy, and offers concrete recommendations for public policy to reduce the spread of HIV/AIDS. The book includes current knowledge about the epidemiologies of HIV/AIDS and injection drug use; characteristics of needle exchange and bleach distribution programs and views on those programs from diverse community groups; and a discussion of laws designed to control possession of needles, their impact on needle sharing among injection drug users, and their

implications for needle exchange programs.

Behavioural change, based on acquiring knowledge and learning skills, along with individual risk assessment, is one of the most effective ways of achieving this and of encouraging uniformed services personnel to become advocates in the fight against HIV/AIDS. Peer education is an important component in this process.

When addressing HIV/AIDS/STIs among uniformed services, this Peer Education Kit can be used both in the training of peer educators and by the peer educators themselves.

100 questions and answers about hiv and aids pdf: HIV Screening and Access to Care Institute of Medicine, Board on Population Health and Public Health Practice, Committee on HIV Screening and Access to Care, 2011-04-21 Increased HIV screening may help identify more people with the disease, but there may not be enough resources to provide them with the care they need. 100 questions and answers about hiv and aids pdf: The Social Impact of AIDS in the United States National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Monitoring the Social Impact of the AIDS Epidemic, 1993-02-01 Europe's Black Death contributed to the rise of nation states, mercantile economies, and even the Reformation. Will the AIDS epidemic have similar dramatic effects on the social and political landscape of the twenty-first century? This readable volume looks at the impact of AIDS since its emergence and suggests its effects in the next decade, when a million or more Americans will likely die of the disease. The Social Impact of AIDS in the United States addresses some of the most sensitive and controversial issues in the public debate over AIDS. This landmark book explores how AIDS has affected fundamental policies and practices in our major institutions, examining: How America's major religious organizations have dealt with sometimes conflicting values: the imperative of care for the sick versus traditional views of homosexuality and drug use. Hotly debated public health measures, such as HIV antibody testing and screening, tracing of sexual contacts, and quarantine. The potential risk of HIV infection to and from health care workers. How AIDS activists have brought about major change in the way new drugs are brought to the marketplace. The impact of AIDS on community-based organizations, from volunteers caring for individuals to the highly political ACT-UP organization. Coping with HIV infection in prisons. Two case studies shed light on HIV and the family relationship. One reports on some efforts to gain legal recognition for nonmarital relationships, and the other examines foster care programs for newborns with the HIV virus. A case study of New York City details how selected institutions interact to give what may be a picture of AIDS in the future. This clear and comprehensive presentation will be of interest to anyone concerned about AIDS and its impact on the country: health professionals, sociologists, psychologists, advocates for at-risk populations, and interested individuals.

100 questions and answers about hiv and aids pdf: *SADC Gender Protocol 2015 Barometer* Morna, Colleen Lowe, Dube, Sifiso, 2016-02-22 In August 2008, Heads of State of the Southern African Development Community adopted the ground-breaking SADC Protocol on Gender and Development. This followed a concerted campaign by NGOs under the umbrella of the Southern Africa Gender Protocol Alliance. The SADC Gender Protocol is the only sub-regional instrument that brings together existing global and continental commitments to gender equality and enhances these through time bound targets. Aligned to Millennium Development Goal Three, the original 28 targets of the Protocol targets expire in 2015. Now that 2015 is here, we need to step back, assess and reposition. In June 2014, SADC Gender Ministers agreed to review the targets of the Gender Protocol in line with the Sustainable Development Goals (SDGs). In May this year, ministers added that they want the Protocol to be accompanied by a Monitoring, Evaluation and Results Framework. The 2015 Barometer shows that implementation is now the biggest missing gap in the quest for gender equality. Now is the time to strengthen resolve, reconsider, reposition, and re-strategise for 2030. SADC GENDER PROTOCOL BAROMETER • 2015 2015 is here!
