Chenoweth draws on her decade-long journey into neighborhood schools where low-income students

and students of color are learning at unexpectedly high levels to reveal a key ingredient to their success: in one way or another, their leaders have confronted the traditional ways that schools are organized and have adopted new systems, all focused on improvement. In vivid profiles of once-embattled schools, Chenoweth shows how school leaders doggedly and patiently reorganized internal systems in order to prioritize teaching and learning, resulting in improved outcomes that in many cases exceeded statewide averages. From how they use time to how they use money, schools that succeed combine a deep belief in the capacity of their students to achieve with deliberate systems focused on student needs. 100 ways to pass the earth science regents: Why Geology Matters Doug Macdougall, 2011-05-02 Volcanic dust, climate change, tsunamis, earthquakes—geoscience explores phenomena that profoundly affect our lives. But more than that, as Doug Macdougall makes clear, the science also provides important clues to the future of the planet. In an entertaining and accessibly written narrative, Macdougall gives an overview of Earth's astonishing history based on information extracted from rocks, ice cores, and other natural archives. He explores such questions as: What is the risk of an asteroid striking Earth? Why does the temperature of the ocean millions of years ago matter today? How are efforts to predict earthquakes progressing? Macdougall also explains the legacy of greenhouse gases from Earth's past and shows how that legacy shapes our understanding of today's human-caused climate change. We find that geoscience in fact illuminates many of today's most pressing issues—the availability of energy, access to fresh water, sustainable agriculture, maintaining biodiversity—and we discover how, by applying new technologies and ideas, we can use it to prepare for the future.
