101 general knowledge questions and answers: The Laws of Software Process Phillip G. Armour, 2003-09-25 Within one generation, software has become one of the principal sources of wealth in the world. The development and use of software has grown faster than for any artifact in the history of the world. Probably no topic or subject in history has accelerated in its rate of practice as software has. Software development now needs to mature into a disciplined activity to overcome the difficulties that have traditionally plagued it. Software developers, engineers, and project managers need a reference that describes the evolution of software: where it has been, and where it is going. *The Laws of Software Process: A New Model for the Production and Management of Software* reveals a novel and compelling structure for development that redefines the very nature and purpose of software. The author explains how, in the modern knowledge economy, software systems are not products in the classical sense, but is the modern medium for the conveyance of information. Literally, software is the currency of the knowledge basis of wealth in today's society. From this definition flows a new assessment of the basics of software development: the purpose of methods and processes; a comparison of programming languages; and an analysis of quality management, cost estimation, and project management and completion. The groundbreaking perspective outlined in this book serves as an expert guide for successful planning and execution of development projects.

101 general knowledge questions and answers: *Coronavirus Disease (COVID-19): Pathophysiology, Epidemiology, Clinical Management and Public Health Response* , 2023-01-25 Volume I.A An outbreak of a respiratory disease first reported in Wuhan, China in December 2019 and the causative agent was discovered in January 2020 to be a novel betacoronavirus of the same subgenus as SARS-CoV and named severe acute respiratory syndrome coronavirus 2 (SARS-CoV-2). Coronavirus disease 2019 (COVID-19) has rapidly disseminated worldwide, with clinical manifestations ranging from mild respiratory symptoms to severe pneumonia and a fatality rate estimated around 2%. Person to person transmission is occurring both in the community and healthcare settings. The World Health Organization (WHO) has recently declared the COVID-19 epidemic a public health emergency of international concern. The ongoing outbreak presents many clinical and public health management challenges due to limited understanding of viral pathogenesis, risk factors for infection, natural history of disease including clinical presentation and outcomes, prognostic factors for severe illness, period of infectivity, modes and extent of virus inter-human transmission, as well as effective preventive measures and public health response and containment interventions. There are no antiviral treatment nor vaccine available but fast track research and development efforts including clinical therapeutic trials are ongoing across the world. Managing this serious epidemic requires the appropriate deployment of limited human resources across all cadres of health care and public health staff, including clinical, laboratory, managerial and

epidemiological data analysis and risk assessment experts. It presents challenges around public communication and messaging around risk, with the potential for misinformation and disinformation. Therefore, integrated operational research and intervention, learning from experiences across different fields and settings should contribute towards better understanding and managing COVID-19. 101 general knowledge questions and answers: *Gender Equality and Inequality in Rural India* C. Vlassoff, 2013-12-11 As India strives to improve overall social and economic conditions and gender relations through policies such as the abolishment of dowry, increasing the legal age at marriage, and promoting educational opportunities for girls, serious challenges remain, especially in rural areas. *Gender Equality and Inequality in Rural India* focuses on the extent to which economic development has resulted in positive changes in women's empowerment and reproductive health, as well as in sex preference. Based on a study from a village in Maharashtra where impressive gains in economic development have occurred in recent decades, Carol Vlassoff examines the impact of son preference on fertility and rural women's economic empowerment and other aspects of reproductive behavior. She provides evidence of the added value of their employment beyond the traditional wage labor and domestic spheres, and argues that policies aimed at closing gender gaps in social inequalities must be complemented by policies fostering employment opportunities for women. While many studies have demonstrated the importance of social empowerment for improved reproductive health, this is the first to separate out the differential effects of social and economic factors. This work goes even further than economic arguments by demonstrating, on the basis of a robust statistical analysis, that women's education and their professional labor force participation contribute to better health and wellbeing of rural society, including through reductions in fertility, son preference, and infant and child mortality.
