10110 technology blvd e dallas tx 75220: Numerical Investigation of Aerodynamics of Canard-Controlled Missile Using Planar and Grid Tail Fins. Part 1. Supersonic Flow James DeSpirito, Milton E. Vaughn, Jr., W. D. Washington, 2002-09 Viscous computational fluid dynamic simulations were used to predict the aerodynamic coefficients and flowfield around a generic canard-controlled missile configuration in supersonic flow. Computations were performed for Mach 1.5 and 3.0, at six angles of attack between 0 and 10, with 0 and 10 canard deflection, and with planar and grid tail fins, for a total of 48 cases. Validation of the computed results was demonstrated by the very good agreement between the computed aerodynamic coefficients and those obtained from wind tunnel measurements. Visualizations of the flowfield showed that the canard trailing vortices and downwash produced a low-pressure region on the starboard side of the missile that in turn produced an adverse side force. The pressure differential on the leeward fin produced by the interaction with the canard trailing vortices is primarily responsible for the adverse roll effect observed when planar fins are used. Grid tail fins improved the roll effectiveness of the canards at low supersonic speed. No adverse rolling moment was observed with no canard deflection, or at the higher supersonic speed for either tail fin type due to the lower intensity of the canard trailing vortices in these cases. Flow visualizations from the simulations performed in this study help in the understanding of the flow physics and can lead to improved canard and tail fin designs for missiles and rockets.

10110 technology blvd e dallas tx 75220: *Justice for All* Charles E 'Chuck' MacLean, Adam Lamparello, 2022-03-30 Justice for All identifies ten central flaws in the criminal justice system and offers an array of solutions - from status quo to evolution to revolution - to address the inequities and injustices that far too often result in courtrooms across the United States. From the investigatory stage to the sentencing and appellate stages, many criminal defendants, particularly

those from marginalized communities, often face procedural and structural barriers that taint the criminal justice system with the stain of unfairness, prejudice, and arbitrariness. Systematic flaws in the criminal justice system underscore the inequitable processes by which courts deprive citizens of liberty and, in some instances, their lives. Comprehensive in its scope and applicability, the book focuses upon the procedural and substantive barriers that often prohibit defendants from receiving fair treatment within the United States criminal justice system. Each chapter is devoted to a particular flaw in the criminal justice system and is divided into two parts. First, the authors discuss in depth the underlying causes and effects of the flaw at issue. Second, the authors present a wide range of possible solutions to address this flaw and to lead to greater equality in the administration of criminal justice. The reader is encouraged throughout to consider and assess all possible options, then defend their choices and preferences. Confronting these issues is critical to reducing racial disparities and guaranteeing Justice for all. Describing the problems and assessing the solutions, Justice for All does not identify all problems or all solutions, but will be of immeasurable value to criminal justice students and scholars, as well as attorneys, judges, and legislators, who strive to address the pervasive flaws in the criminal justice system.
