104 business circle terrell tx: Linguistic Ecology Peter Mühlhäusler, 2002-11-01 In this book, the author examines the transformation of the Pacific language region under the impact of colonization, westernization and modernization. By focusing on the linguistic and socio-historical changes of the past 200 years, it aims to bring a new dimension to the study of Pacific linguistics, which up until now has been dominated by questions of historical reconstruction and language typology. In contrast to the traditional portrayal of linguistic change as a natural process, the author focuses on the cultural and historical forces which drive language change. Using the metaphor of language ecology to explain and describe the complex interplay between languages, speakers and social practice, the author looks at how language ecologies have functioned in the past to sustain language diversity, and, at what happens when those ecologies are disrupted. Whilst most of the examples used in the book are taken from the Pacific and Australian region, the insights derived from this area are shown to have global applications. The text should be useful for linguists and all those interested in the large scale loss of human language.

104 business circle terrell tx: Theories of Political Protest and Social Movements Karl-Dieter Opp, 2009-04-08 Political protest and social movements are ubiquitous phenomena. This book focuses on the current theoretical approaches that aim at explaining them: the theory of collective action, the resource mobilization perspective, political opportunity structure theory, the identity approach, the framing perspective, and the dynamics of contention approach. The book has three objectives: (1) Many basic concepts like political opportunities or identity are not clearly defined. It is further often a matter of interpretation what factors are supposed to affect which phenomena. The first aim is therefore to provide a detailed introduction to and a clear restatement of the theories. Only then is it possible to assess and improve them. (2) For each theory the major strengths and weaknesses are discussed, and various modifications and extensions are suggested. (3) Building on these analyses, it is shown how the theories can be integrated into a single theoretical paradigm: the structural-cognitive model.

104 business circle terrell tx: The Power of American Governors Thad Kousser, Justin H. Phillips, 2012-09-17 With limited authority over state lawmaking, but ultimate responsibility for the performance of government, how effective are governors in moving their programs through the legislature? This book advances a new theory about what makes chief executives most successful and explores this theory through original data. Thad Kousser and Justin H. Phillips argue that negotiations over the budget, on the one hand, and policy bills on the other are driven by fundamentally different dynamics. They capture these dynamics in models informed by interviews with gubernatorial advisors, cabinet members, press secretaries and governors themselves. Through a series of novel empirical analyses and rich case studies, the authors demonstrate that governors can be powerful actors in the lawmaking process, but that what they're bargaining over - the budget or policy - shapes both how they play the game and how often they can win it.

Antonio Morata, 2021-04-15 The use of non-Saccharomyces yeast species is currently a biotechnology trend in enology for which they are being broadly used to improve the sensory profile of wines because they affect aroma, color, and mouthfeel. They have become a powerful biotool to modulate the influence of global warming on grape varieties, helping to maintain the acidity, decrease the alcoholic degree, stabilize wine color, and increase freshness. In cool climates, some non-Saccharomyces can promote demalication or color stability by the formation of stable derived pigments. Additionally, non-Saccharomyces yeasts open new possibilities in biocontrol for removing spoilage yeast and bacteria or molds that can produce and release mycotoxins and, thereby, help in reducing applied SO₂ levels.

Angelelli, 2013-04-17 I wish to express, first of all, my profound gratitude to Professor J.M. Bochenski, without whose assistance the present work would have not been possible. To be concise, I would like to state that his contribution to this book may be viewed at three levels: (1) that of the general spirit, (2) that of the specific ideas, theses or approaches which are expressed in its pages, (3) that of this work qua doctoral dissertation. The general spirit which has guided my research coincides with that underlying Professor :Oochenski's own works, in particular his *Formale Logik* (Munchen 1956). Moreover, the particular occasion which suggested my investigation was a statement included in that book according to which the literature in the field still lacked a detailed work on Frege (p. 317). I wish, likewise, to express my gratitude to other professors of the University of Fribourg for their generous help. I mention especially Professors P. Wyser, M.D. Philippe, N. Luyten, and V. Kuiper. I have also benefited from Professor E. Specker's lectures at the Eidgenössische Technische Hochschule (Zürich) and from Professor Olof Gigon's lectures at the University of Bern. From an earlier period I wish to express my gratitude to the professors of the philosophy department of the Universidad Nacional de Buenos Aires, especially the late Professor Francisco Romero. The Swiss National Library (Bern) has greatly facilitated access to bibliographical sources, and the library of the University of Münster (Westphalien) has kindly provided microfilms of Frege's Nachlass.
