400 westage business center dr: Velvet Temple West, 2015-05-12 Equal parts steamy and funny, with a few genuinely creepy moments, this paranormal romance has everything -- compelling characters, plenty of witty banter, and a romance that just might be to die for. After losing both her parents before age 17, aspiring designer Caitlin Holte feels like her whole world has been turned upside down, and that was before she accidentally attracted the attention of a demon. Then, she learns that her hot, bad-boy neighbor, Adrian -- who might have just saved her life -- is actually a half-demon vampire. Suddenly, Caitlin is stuck with a vampire bodyguard who feels that the best way to protect her is to become her pretend boyfriend. Trouble is, Caitlin is starting to fall in love for real, while Adrian can never love a human. Caitlin trusts Adrian to keep her safe from his demon father, but will he be able to protect her heart? Temple West's debut novel Velvet is a sexy, delightful romance chosen by readers like you for Macmillan's young adult imprint Swoon Reads. Praise for Velvet: "This romantic Twilight readalike shines with credible dialogue and fully developed characters." —School Library Journal Velvet is fun and very entertaining with snappy dialogue, awesome characters and some solid teen angst." —The Windy Pages

400 westage business center dr: *Congenital Abnormalities and Preterm Birth Related to Maternal Illnesses During Pregnancy* Nándor Ács, Ferenc G. Bánhidý, Andrew E. Czeizel, 2010-07-05 The major objective of our studies in the last decade was a systematic analysis of maternal diseases during pregnancy to reveal their possible adverse effects on birth outcomes. The two most important factors of infant mortality were particularly analyzed: structural birth defects, known as congenital abnormalities (CAs) and preterm birth (PB). In general the objectives of scientific studies might be either to test a new hypothesis or to confirm or confront previously published results. However, less frequently the authors/scientists have personal motivations determined by their professional activities. The authors of this book are practicing physicians and genetic epidemiologist who are mainly interested in the following three practical questions: 1. The possible adverse effects of pharmaceutical products. The possible teratogenic potential of about 170 drugs has been evaluated very thoroughly using the data set of the Hungarian Case-Control Surveillance of Congenital Abnormalities (HCCSCA) in the last 50 years. These drugs were used to treat maternal diseases and the findings of our population-based case-control studies will be cited in this book and are shown in the Appendix at the end of the book. However, our long experiences showed two problems in the drug teratology. In general the evaluation of clinical doses of these drugs is a particularly difficult challenge due to the modification effects of confounders. This problem motivated one of the authors to establish a new model of disaster epidemiology.
