46 inch mtd mower deck belt diagram: Hexagon (KH-9) Mapping Camera Program and Evolution Maurice G. Burnett, 2012 The United States developed the Gambit and Hexagon programs to improve the nation's means for peering over the iron curtain that separated western democracies from east European and Asian communist countries. The inability to gain insight into vast denied areas required exceptional systems to understand threats posed by US adversaries. Corona was the first imagery satellite system to help see into those areas. Hexagon began as a Central Intelligence Agency (CIA) program with the first concepts proposed in 1964. The CIA's primary goal was to develop an imagery system with Corona-like ability to image wide swaths of the earth, but with resolution equivalent to Gambit. Such a system would afford the United States even greater advantages monitoring the arms race that had developed with the nation's adversaries. The Hexagon mapping camera flew on 12 of the 20 Hexagon missions. It proved to be a remarkably efficient and prodigious producer of imagery for mapping purposes. The mapping camera system was successful by every standard including technical capabilities, reliability, and capacity.

46 inch mtd mower deck belt diagram: The Management of Voice Disorders M. D. Morrison, Hamish Nichol, Linda Rammage, 2013-11-11 There has been a tremendous growth of interest in the human voice and its disorders during the past decade. This has led to the development of a variety of 'voice labs' or 'voice clinics' that are able to offer unique interdisciplinary assessment and treatment facilities. To cover all the bases, the voice care team requires input from laryngology, speech-language pathology, psychiatry, neurology, voice science, music pedagogy, biomedical engineering and other peripheral fields. Because of the multidisciplinary nature of voice clinics there have been a number of books written that address our subject from different professional perspectives. These tend to be multi-authored works that draw on expertise from around the world, such as a laryngologist from New York, a speech pathologist from Toronto, etc. All are colleagues that share similar interests but never actually share the management problems of the same patients. This book has been planned and written by the members of a single 'voice clinic'. It is our hope that it will reflect a singleness of direction and purpose in the way it presents our approach to a complex topic. Because of our regular interactive meetings over problem patients in which we debate the meaning of our observations, the evolution of etiological classification systems, and the rationale for particular therapy approaches, we feel that we have become a team that is greater than the sum of its parts, and that there is value in sharing our cumulative thoughts with others. This is not simply a laryngology text for laryngologists.
