Gofman, 1999 Medical X-rays, including fluoroscopy and CT scans, are a major cause of both cancer and coronary heart disease, according to this new study. This reader-friendly work uses no complex statistical operations. It shows each step between raw data and conclusions, and defines basic terms and concepts. Startling conclusions are supported by detailed reviews of medical studies from the 1940s through the 1990s. The author recommends X-ray procedures at much lower dosage levels. Includes a booklet summarizing conclusions of the study. The author is a professor of molecular and cell biology at the University of California-Berkeley, and has investigated the effects of medical X-rays since the 1960s. Paper edition (unseen), \$27.
