6200 technology blvd sandston va: The Chesapeake House Cary Carson, Carl R. Lounsbury, 2013-03-25 For more than thirty years, the architectural research department at Colonial Williamsburg has engaged in comprehensive study of early buildings, landscapes, and social history in the Chesapeake region. Its painstaking work has transformed our understanding of building practices in the colonial and early national periods and thereby greatly enriched the experience of visiting historic sites. In this beautifully illustrated volume, a team of historians, curators, and

conservators draw on their far-reaching knowledge of historic structures in Virginia and Maryland to illuminate the formation, development, and spread of one of the hallmark building traditions in American architecture. The essays describe how building design, hardware, wall coverings, furniture, and even paint colors telegraphed social signals about the status of builders and owners and choreographed social interactions among everyone who lived or worked in gentry houses, modest farmsteads, and slave quarters. The analyses of materials, finishes, and carpentry work will fascinate old-house buffs, preservationists, and historians alike. The lavish color photography is a delight to behold, and the detailed catalogues of architectural elements provide a reliable guide to the form, style, and chronology of the region's distinctive historic architecture.

Designing Architecture is an indispensable tool to assist both students and young architects in formulating an idea, transforming it into a building, and making effective design decisions. This book promotes integrative and critical thinking in the preliminary design of buildings to inspire creativity, innovation, and design excellence. This compendium of individual wisdom and collective experience offers explicit guidance to students and young professionals on how to approach, analyze, and execute specific tasks; develop and refine a process to facilitate the best possible design projects; and create meaningful architectural form. Here the design process – from orchestrating client participation to finalizing schematic design – is explored and illuminated. The following material is presented to make the book a useful didactic tool for professional development: explicit strategies for doing design rather than simply reviewing principles and precedents creative ideas in approaching and framing problems in design terms specific methods to translate ideas to culturally significant, socially responsive, and environmentally sensitive buildings techniques to integrate all levels of cognition from analysis to epiphany counsel on developing a personalized process for engaging design projects case studies augment the text and chronicle fascinating applications of the design process. 6200 technology blvd sandston va: *Lost Communities of Virginia* Terri L. Fisher, Kirsten Sparenborg, 2011 Virginia's back roads and rural areas are dotted with traces of once-thriving communities. General stores, train depots, schools, churches, banks, and post offices provide intriguing details of a way of life now gone. The buildings may be empty or repurposed today, the existing community may be struggling to survive or rebuilding itself in a new and different way, but the story behind each community's original development is an interesting and important footnote to the development of Virginia and the United States. *Lost Communities of Virginia* documents thirty small communities from throughout the Commonwealth that have lost their original industry, transportation mode, or way of life. Using contemporary photographs, historical information, maps, and excerpts of interviews with longtime residents of these communities, the book documents the present conditions, recalls past boom times, and explains the role of each community in regional settlement.
