7 2 study guide and intervention: The SAFER-R Model George Everly, Jr., 2017-04 Psychological Crisis Intervention: The SAFER-R Model is designed to provide the reader with a simple set of guidelines for the provision of psychological first aid (PFA). The model of psychological first aid (PFA) for individuals presented in this volume is the SAFER-R model developed by the authors. Arguably it is the most widely used tactical model of crisis intervention in the world with roughly 1 million individuals trained in its operational and derivative guidelines. This model of PFA is not a therapy model nor a substitute for therapy. Rather it is designed to help crisis interventionists stabilize and mitigate acute crisis reactions in individuals, as opposed to groups. Guidelines for triage and referrals are also provided. Before plunging into the step-by-step guidelines, a brief history and terminological framework is provided. Lastly, recommendations for addressing specific psychological challenges (suicidal ideation, resistance to seeking professional psychological support, and depression) are provided.

7 2 study guide and intervention: Handbook of Reading Disability Research Anne McGill-Franzen, Richard Allington, 2010-09-17 Bringing together a wide range of research on reading disabilities, this comprehensive Handbook extends current discussion and thinking beyond a narrowly defined psychometric perspective. Emphasizing that learning to read proficiently is a long-term developmental process involving many interventions of various kinds, all keyed to individual developmental needs, it addresses traditional questions (What is the nature or causes of reading disabilities? How are reading disabilities assessed? How should reading disabilities be remediated? To what extent is remediation possible?) but from multiple or alternative perspectives. Taking incursions into the broader research literature represented by linguistic and anthropological paradigms, as well as psychological and educational research, the volume is on the front line in exploring the relation of reading disability to learning and language, to poverty and prejudice, and to instruction and schooling. The editors and authors are distinguished scholars with extensive research experience and publication records and numerous honors and awards from professional organizations representing the range of disciplines in the field of reading disabilities. Throughout, their contributions are contextualized within the framework of educators struggling to develop concrete instructional practices that meet the learning needs of the lowest achieving readers.
