760 pumpmaster parts diagram: Ertl Toy Tractors Patrick Ertl, Catherine Lee Phillips, 2004 In more than one respect, Ertl, long the most celebrated name in diecast toy tractors, is much like Tonka: both were founded shortly after World War II in the basements of enterprising Midwesterners. Although Ertl, also like Tonka, has produced countless toy trucks, this book will focus solely on the Iowa toymaker's true bread and butter: toy tractors produced from 1945 to present. Two hundred color photos depict Ertl's 1/16- and 1/64-scale tractors, up close with theater-gel backgrounds, diecast implements, and the sort of plastic injection-molded farmers and livestock with which Ertl has often packaged its tractors. Accompanying the is the story of how this Dyersville-based company grew by leaps and bounds, including founder Fred Ertl's first licensing of some of these companies' names and actual designs in 1945 , the family-based assembly line he and his wife established in their home, Ertl's renowned commitment to quality, and the incredible detail that goes into today's precision-made scale models.- Most collectible toy tractors available today are produced by Ertl- The truly American story of how an unemployed immigrant foundryman licensed the designs of ag giants I-H and J-D, melted surplus aluminum aircraft pistons in his basement furnace, poured the slag into hand-made sand molds, and put his five sons to work assembling and painting the tractors at the kitchen table- New 1/16 scale Ertl tractors typically sell in the \$60 price range; most highly collectible vintage examples in the mid-three-figure range- WalMart is the #1 customer; followed by Farm & Fleet- Ertl, celebrating its 60th Anniversary, is the 900 pound gorilla in this categoryAbout the AuthorPatrick Ertl is the publisher for Antique Power magazine. Catherine Lee Phillips provided the photography for the book. They both live in Yellow Springs, Ohio.

760 pumpmaster parts diagram: 10th International Conference on Turbochargers and Turbocharging Institution of Mechanical Engineers, 2012-05-11 This book presents the papers from the latest international conference, following on from the highly successful previous conferences in this series held regularly since 1978. Papers cover all current and novel aspects of turbocharging systems design for boosting solutions for engine downsizing. The focus of the papers is on the application of turbocharger and other pressure charging devices to spark ignition (SI) and compression ignition (CI) engines in the passenger car and commercial vehicles. Novel boosting solutions for diesel engines operating in the industrial and marine market sectors are also included. The current emission legislations and environmental trends for reducing CO2 and fuel consumption are the major market forces in the transport (land and marine) and industry sectors. In these market sectors the internal combustion engine is the key product where downsizing is the driver for development for both SI and CI engines in the passenger car and commercial vehicle applications. The more stringent future market forces and environmental considerations mean more stringent engine downsizing, thus, novel systems are required to provide boosting solutions including hybrid, electric-motor and exhaust waste energy recovery systems for high efficiency, response, reliability, durability and compactness etc. For large engines the big challenge is to enhance the high specific power and efficiency whilst reducing emission levels (Nox and Sox) with variable quality fuels. This will require turbocharging systems for very high boost pressure, efficiency and a high degree of system flexibility. - Presents papers from all the latest international conference - Papers cover all aspects of the turbocharging systems design for boosting solutions for engine downsizing - The focus of the papers is on the application of turbocharger and other pressure charging devices to spark ignition (SI) and compression ignition (CI) engines in the passenger car and commercial vehicles
