Gibson, 2019 Phoenix's Ahwatukee Foothills grew from open desert to a community of nearly ninety thousand in just a few decades. From the first homesteaders and farmers to the modern visionaries and trailblazers who established homes and businesses, it is a very compelling story. Discover the mystery of the Lost Ranch, the reason for Elliot Road's misspelling, the battle over annexation and the origins of the Easter Parade. Local historian Marty Gibson recounts the challenges, struggles and successes in this collection of tales from the other side of the hill.

Gibson, 2006-09 South of Phoenix's South Mountain, west of Interstate 10, north of the Gila River Indian Community, and east of Arizona state land lies the picturesque village of Ahwatukee-Foothills, home to some 87,000 people. Its proximity to adjacent cities, cultural centers, shopping, and dining combines with these natural boundaries to give the area its beautiful topography, sense of peaceful isolation, and high desirability as a great place to live, work, and play. But long before there was a freeway, the area was part of the Kyrene farming community, a rural patchwork of hardy pioneer families typifying the country's agricultural way of life during the first half of the 20th century.

8600 s science dr tempe az 85284: **Nontraditional Careers for Chemists** Lisa M. Balbes, 2007 A Chemistry background prepares you for much more than just a laboratory career. The broad science education, analytical thinking, research methods, and other skills learned are of value to a wide variety of types of employers, and essential for a plethora of types of positions. Those who are interested in chemistry tend to have some similar personality traits and characteristics. By understanding your own personal values and interests, you can make informed decisions about what career paths to explore, and identify positions that match your needs. By expanding your options for not only what you will do, but also the environment in which you will do it, you can vastly increase

the available employment opportunities, and increase the likelihood of finding enjoyable and lucrative employment. Each chapter in this book provides background information on a nontraditional field, including typical tasks, education or training requirements, and personal characteristics that make for a successful career in that field. Each chapter also contains detailed profiles of several chemists working in that field. The reader gets a true sense of what these people do on a daily basis, what in their background prepared them to move into this field, and what skills, personality, and knowledge are required to make a success of a career in this new field. Advice for people interested in moving into the field, and predictions for the future of that career, are also included from each person profiled. Career fields profiled include communication, chemical information, patents, sales and marketing, business development, regulatory affairs, public policy, safety, human resources, computers, and several others. Taken together, the career descriptions and real case histories provide a complete picture of each nontraditional career path, as well as valuable advice about how career transitions can be planned and successfully achieved by any chemist.

While interdisciplinarity is encouraged by research funders, academics themselves receive mixed messages about how, when and whether to follow this route. Building upon a series of career history interviews with established interdisciplinary researchers, the author reveals fundamental misunderstandings about the nature of interdisciplinary knowledge, how this is shared, and the skills these researchers bring. The book addresses these issues on both a personal and systemic level, identifying how a resilient researcher can craft their own research trajectory to view interdisciplinarity as a truly embedded approach.

8600 s science dr tempe az 85284: Carbon and High Performance Fibres Directory and Databook Trevor Starr, 2012-12-06 PURPOSE Since the publication of the previous, Fifth Edition of this volume in 1991, the 'advanced' sector of the world-wide composites industry in particular, has seen many company changes in reorganisation, realignment and ownership. These changes have affected the raw material suppliers as well as those moulding the finished product. Changes in the demands of the aerospace, defence and allied industries have largely been the cause. That situation has been particularly true for those manufacturing and distributing reinforcement fibres and fabrics, necessitating this comprehensive Sixth Edition revision. However publication is also timely, because a major and important consequence is the better consideration now being given by the 'commercial' market sector, to the use - and advantages - of some of the carbon, aramid and other

high-performance reinforcements, described within these pages. Although supplying at a much lower finished component cost than applies for the aerospace and defence markets, the total tonnage output answering the typically lower-performance requirements of the 'commercial' sector, is higher by many factors. Overall therefore, the summation of output tonnage and price, will continue to favour the latter. Nevertheless this 'commercial' market sector must, albeit slowly, ultimately benefit to a marked degree from an increasing technology spin-off, promoted to an extent somewhat earlier than might otherwise have been expected, by the noted changes in market place demand.
