a history of america in 100 maps: Mapping the Nation Susan Schulten, 2012-06-29 "A compelling read" that reveals how maps became informational tools charting everything from epidemics to slavery (Journal of American History). In the nineteenth century, Americans began to use maps in radically new ways. For the first time, medical men mapped diseases to understand and prevent epidemics, natural scientists mapped climate and rainfall to uncover weather patterns, educators mapped the past to foster national loyalty among students, and Northerners mapped slavery to assess the power of the South. After the Civil War, federal agencies embraced statistical and thematic mapping in order to profile the ethnic, racial, economic, moral, and physical attributes of a reunified nation. By the end of the century, Congress had authorized a national archive of maps, an explicit recognition that old maps were not relics to be discarded but unique records of the nation's past. All of these experiments involved the realization that maps were not just illustrations of data, but visual tools that were uniquely equipped to convey complex ideas and information. In Mapping the Nation, Susan Schulten charts how maps of epidemic disease, slavery, census statistics, the environment, and the past demonstrated the analytical potential of cartography, and in the process transformed the very meaning of a map. Today, statistical and thematic maps are so ubiquitous that we take for granted that data will be arranged cartographically. Whether for urban planning, public health, marketing, or political strategy, maps have become everyday tools of social organization, governance, and economics. The world we inhabit—saturated with maps and graphic information—grew out of this sea change in spatial thought and representation in the nineteenth century, when Americans learned to see themselves and their nation in new dimensions.

a history of america in 100 maps: A History of the Twentieth Century in 100 Maps Tim Bryars, Tom Harper, 2014-12-10 The twentieth century was a golden age of mapmaking, an era of cartographic boom. Maps proliferated and permeated almost every aspect of daily life, not only

chronicling geography and history but also charting and conveying myriad political and social agendas. Here Tim Bryars and Tom Harper select one hundred maps from the millions printed, drawn, or otherwise constructed during the twentieth century and recount through them a narrative of the century's key events and developments. As Bryars and Harper reveal, maps make ideal narrators, and the maps in this book tell the story of the 1900s—which saw two world wars, the Great Depression, the Swinging Sixties, the Cold War, feminism, leisure, and the Internet. Several of the maps have already gained recognition for their historical significance—for example, Harry Beck's iconic London Underground map—but the majority of maps on these pages have rarely, if ever, been seen in print since they first appeared. There are maps that were printed on handkerchiefs and on the endpapers of books; maps that were used in advertising or propaganda; maps that were strictly official and those that were entirely commercial; maps that were printed by the thousand, and highly specialist maps issued in editions of just a few dozen; maps that were envisaged as permanent keepsakes of major events, and maps that were relevant for a matter of hours or days. As much a pleasure to view as it is to read, *A History of the Twentieth Century in 100 Maps* celebrates the visual variety of twentieth century maps and the hilarious, shocking, or poignant narratives of the individuals and institutions caught up in their production and use.

a history of america in 100 maps: A History of the Second World War in 100 Maps

Jeremy Black, 2020-11-18 The First World War was marked by an exceptional expansion in the use and production of military cartography. But World War II took things even further, employing maps, charts, reconnaissance, and the systematic recording and processing of geographical and topographical information on an unprecedented scale. As Jeremy Black—one of the world's leading military and cartographic historians—convincingly shows in this lavish full-color book, it is impossible to understand the events and outcomes of the Second World War without deep reference to mapping at all levels. In World War II, maps themselves became the weapons. *A History of the Second World War in 100 Maps* traces how military cartography developed from simply recording and reflecting history to having a decisive impact on events of a global scale. Drawing on one hundred key maps from the unparalleled collections of the British Library and other sources—many of which have never been published in book form before—Jeremy Black takes us from the prewar mapping programs undertaken by both Germany and the United Kingdom in the mid-1930s through the conflict's end a decade later. Black shows how the development of maps led directly to the planning of the complex and fluid maneuvers that defined the European theater in World War II: for example, aerial reconnaissance photography allowed for the charting of beach gradients and ocean depths in the runup to the D-Day landings, and the subsequent troop movements at Normandy would have been impossible without the help of situation maps and photos. In the course of the conflict, both in Europe and the Pacific, the realities of climate, terrain, and logistics—recorded on maps—overcame the Axis powers. Maps also became propaganda tools as the pages of *Time* outlined the directions of the campaigns and the Allies dropped maps from their aircraft. In this thrilling and unique book, Jeremy Black blends his singular cartographic and military expertise into a captivating overview of World War II from the air, sea, and sky, making clear how fundamental maps were to every aspect of this unforgettable global conflict.

a history of america in 100 maps: A History of the World in 12 Maps Jerry Brotton, 2014-10-28 A New York Times Bestseller “Maps allow the armchair traveler to roam the world, the diplomat to argue his points, the ruler to administer his country, the warrior to plan his campaigns and the propagandist to boost his cause... rich and beautiful.” – Wall Street Journal Throughout history, maps have been fundamental in shaping our view of the world, and our place in it. But far from being purely scientific objects, maps of the world are unavoidably ideological and subjective, intimately bound up with the systems of power and authority of particular times and places. Mapmakers do not simply represent the world, they construct it out of the ideas of their age. In this scintillating book, Jerry Brotton examines the significance of 12 maps - from the almost mystical representations of ancient history to the satellite-derived imagery of today. He vividly recreates the environments and circumstances in which each of the maps was made, showing how each conveys a highly individual view of the world. Brotton shows how each of his maps both influenced and reflected contemporary events and how, by considering it in all its nuances and omissions, we can better understand the world that produced it. Although the way we map our surroundings is more precise than ever before, Brotton argues that maps today are no more definitive or objective than they have ever been. Readers of this beautifully illustrated and masterfully argued book will never look at a map in quite the same way again. “A fascinating and panoramic new history of the cartographer’s art.” – The Guardian “The intellectual background to these images is conveyed with beguiling erudition.... There is nothing more subversive than a map.” – The Spectator “A mesmerizing and beautifully illustrated book.” —The Telegraph

a history of america in 100 maps: Picturing America Stephen J. Hornsby, 2017-03-23 Instructive, amusing, colorful—pictorial maps have been used and admired since the first medieval cartographer put pen to paper depicting mountains and trees across countries, people and objects around margins, and sea monsters in oceans. More recent generations of pictorial map artists have continued that traditional mixture of whimsy and fact, combining cartographic elements with text and images and featuring bold and arresting designs, bright and cheerful colors, and lively detail. In the United States, the art form flourished from the 1920s through the 1970s, when thousands of innovative maps were mass-produced for use as advertisements and decorative objects—the golden age of American pictorial maps. *Picturing America* is the first book to showcase this vivid and popular genre of maps. Geographer Stephen J. Hornsby gathers together 158 delightful pictorial jewels, most drawn from the extensive collections of the Library of Congress. In his informative introduction, Hornsby outlines the development of the cartographic form, identifies several representative artists, describes the process of creating a pictorial map, and considers the significance of the form in the history of Western cartography. Organized into six thematic sections, *Picturing America* covers a vast swath of the pictorial map tradition during its golden age, ranging from “Maps to Amuse” to “Maps for War.” Hornsby has unearthed the most fascinating and visually striking maps the United States has to offer: Disney cartoon maps, college campus maps, kooky state tourism ads, World War II promotional posters, and many more. This remarkable, charming volume’s glorious full-color pictorial maps will be irresistible to any map lover or armchair traveler.

a history of america in 100 maps: The Social Life of Maps in America, 1750-1860 Martin Brückner, 2017-10-26 In the age of MapQuest and GPS, we take cartographic literacy for granted. We should not; the ability to find meaning in maps is the fruit of a long process of exposure and instruction. A carto-coded America—a nation in which maps are pervasive and meaningful—had to be created. *The Social Life of Maps* tracks American cartography’s spectacular rise to its unprecedented cultural influence. Between 1750 and 1860, maps did more than communicate geographic information and political pretensions. They became affordable and intelligible to ordinary American men and women looking for their place in the world. School maps quickly entered classrooms, where they shaped reading and other cognitive exercises; giant maps drew attention in public spaces; miniature maps helped Americans chart personal experiences. In short, maps were uniquely social objects whose visual and material expressions affected commercial practices and graphic arts, theatrical performances and the communication of emotions. This lavishly illustrated study follows popular maps from their points of creation to shops and galleries, schoolrooms and coat pockets, parlors and bookbindings. Between the decades leading up to the Revolutionary War and the Civil War, early Americans bonded with maps; Martin Bruckner’s comprehensive history of quotidian cartographic encounters is the first to show us how.

a history of america in 100 maps: A History of the 20th Century in 100 Maps Tim Bryars,

Tom Harper, 2014 The 20th century was a golden age of map-making, and maps permeated almost every aspect of daily life. It was a century overshadowed by war which was also marked by tremendous social and technological change to which millions of contemporary maps bear witness. Most were created for a specific and immediate purpose, and have never been reprinted or discussed, until now. From the first British concentration camps to the only Nazi labour camp on British soil, and from a trench map used at the Battle of the Somme to an escape and evasion map from the first Gulf War, this book explores the cartographic legacy of 20th-century conflict, from top-secret documents to mass propaganda. These 100 maps tell many stories, revealing changing social attitudes towards the unfamiliar and unconventional, from Jewish London at the turn of the century to women in the workplace, and from the Edwardian opium trade to gay London in the 1980s. The maps cover the peak of imperial pageantry as well as rapid post-war decolonisation, and they explore technological change from the expansion of the London Underground system to 1980s computer games. This book tells the story of a 'British' 20th century, but one which has been interpreted in the broadest possible sense, culturally and geographically.

a history of america in 100 maps: *Cartography* Matthew H. Edney, 2019-04-12 “In his most ambitious work to date, [Edney] questions the very concept of ‘cartography’ to argue that this flawed ideal has hobbled the study of maps.” —Susan Schulten, author of *A History of America in 100 Maps* Over the past four decades, the volumes published in the landmark *History of Cartography* series have both chronicled and encouraged scholarship about maps and mapping practices across time and space. As the current director of the project that has produced these volumes, Matthew H. Edney has a unique vantage point for understanding what “cartography” has come to mean and include. In this book Edney disavows the term cartography, rejecting the notion that maps represent an undifferentiated category of objects for study. Rather than treating maps as a single, unified group, he argues, scholars need to take a processual approach that examines specific types of maps—sea charts versus thematic maps, for example—in the context of the unique circumstances of their production, circulation, and consumption. To illuminate this bold argument, Edney chronicles precisely how the ideal of cartography that has developed in the West since 1800 has gone astray. By exposing the flaws in this ideal, his book challenges everyone who studies maps and mapping practices to reexamine their approach to the topic. The study of cartography will never be the same. “[An] intellectually bracing and marvellously provocative account of how the mythical ideal of cartography developed over time and, in the process, distorted our understanding of maps.” —Times Higher Education “*Cartography: The Ideal and Its History* offers both a sharp critique of current practice and a call to reorient the field of map studies. A landmark contribution.” —Kären Wigen, coeditor of *Time in Maps*

a history of america in 100 maps: *Maps of War* Jeremy Black, 2016-10-06 There is little documented mapping of conflict prior to the Renaissance period, but, from the 17th century onwards, military commanders and strategists began to document the wars in which they were involved and later, to use mapping to actually plan the progress of a conflict. Using contemporary maps, this sumptuous new volume covers the history of the mapping of war on land and shows the way in which maps provide a guide to the history of war. Content includes: The beginnings of military mapping up to 1600 including the impact of printing and the introduction of gunpowder The seventeenth century: The focus is on maps to illustrate war, rather than as a planning tool and the chapter considers the particular significance of maps of fortifications. The eighteenth century: The growing need for maps on a world scale reflects the spread of European power and of transoceanic conflict between Europeans. This chapter focuses in particular on the American War of Independence. The nineteenth century: Key developments included contouring and the creation of military surveying. Subjects include the Napoleonic Wars and the American Civil War The twentieth century including extended features on the First and Second World Wars including maps showing trench warfare and aerial reconnaissance. Much of the chapter focuses on the period from 1945 to the present day including special sections on the Vietnam War and the Gulf Wars.

a history of america in 100 maps: *The Years of Rice and Salt* Kim Stanley Robinson, 2003-06-03 With the same unique vision that brought his now classic *Mars* trilogy to vivid life, bestselling author Kim Stanley Robinson boldly imagines an alternate history of the last seven hundred years. In his grandest work yet, the acclaimed storyteller constructs a world vastly different from the one we know. . . . “A thoughtful, magisterial alternate history from one of science fiction’s most important writers.”—The New York Times Book Review It is the fourteenth century and one of the most apocalyptic events in human history is set to occur—the coming of the Black Death. History

teaches us that a third of Europe's population was destroyed. But what if the plague had killed 99 percent of the population instead? How would the world have changed? This is a look at the history that could have been—one that stretches across centuries, sees dynasties and nations rise and crumble, and spans horrible famine and magnificent innovation. Through the eyes of soldiers and kings, explorers and philosophers, slaves and scholars, Robinson navigates a world where Buddhism and Islam are the most influential and practiced religions, while Christianity is merely a historical footnote. Probing the most profound questions as only he can, Robinson shines his extraordinary light on the place of religion, culture, power—and even love—in this bold New World. "Exceptional and engrossing."—New York Post "Ambitious . . . ingenious."—Newsday

a history of america in 100 maps: *Historical Atlas of Native Americans* IAN BARNES, 2019-07-16 Historical Atlas of Native Americans is a detailed and comprehensive exploration of the social, political, and geographical history of the indigenous peoples of North America. With beautiful, computer-generated maps and charts based on the latest academic research, readers can see the original positioning of Native American peoples before the arrival of Europeans. Traditional language groups and trade routes are charted, along with their enforced movements to make way for colonizers. Particular emphasis is placed on the role of women in tribal society, the traditional familial and societal structures of Native Americans, and their diverse cultural values and practices. The atlas starts with the early migration of peoples across the Bering Land Bridge and follows how they spent their lives before European settlers arrived. This thorough guide includes detailed chapters on the remarkable civilizations of the Incas, Maya, and Aztecs, as well as the lesser-known Mississippian society, the Hohokum, and the Anasazi. The creation stories of different people, their art and culture, plus kinship and the way their societies were constructed are discussed, while maps show the complex trade routes that crossed the continent and the different languages they spoke. The book explores the crucial first contacts with European colonists, as well as the sometimes hostile interactions they had with explorers like the Vikings and Christopher Columbus. Over 100 color photographs and illustrations help illuminate the events that have shaped Native American history.

a history of america in 100 maps: *Mapping Nature across the Americas* Kathleen A. Brosnan, James R. Akerman, 2021-10-19 Maps are inherently unnatural. Projecting three-dimensional realities onto two-dimensional surfaces, they are abstractions that capture someone's idea of what matters within a particular place; they require selections and omissions. These very characteristics, however, give maps their importance for understanding how humans have interacted with the natural world, and give historical maps, especially, the power to provide rich insights into the relationship between humans and nature over time. That is just what is achieved in *Mapping Nature across the Americas*. Illustrated throughout, the essays in this book argue for greater analysis of historical maps in the field of environmental history, and for greater attention within the field of the history of cartography to the cultural constructions of nature contained within maps. This volume thus provides the first in-depth and interdisciplinary investigation of the relationship between maps and environmental knowledge in the Americas—including, for example, stories of indigenous cartography in Mexico, the allegorical presence of palm trees in maps of Argentina, the systemic mapping of US forests, and the scientific platting of Canada's remote lands.
