a level education means: English as a Language of Teaching and Learning for Community Secondary Schools in Tanzania Elia Shabani Mligo, Mikael Mwashilindi, 2017-08-07 This book examines the challenges posed by English, a foreign language, as a language of teaching and learning for community secondary schools in Tanzania in terms of academic performance. The book probes the necessity for having two languages of instruction in the Tanzanian educational system. While Kiswahili, the native language, is predominantly understood by the majority of people, the discussion in this book indicates that most students in community secondary schools in Tanzania are incompetent in understanding, writing, listening, reading, and speaking English, a language they use in learning and doing their examinations, especially in the early stages of their secondary studies. The incompetence in the above-mentioned skills is mostly caused by their inability to cope with the abrupt transition in the languages of instruction from their pre-primary and primary school study [Kiswahili] to secondary school study [English]. Moreover, most teachers are unable to use the English language as a means to impart knowledge or facilitate learning to their students, leading them to code-switching and code-mixing. This book poses a challenge to countries whose students pass through a transition from one language of instruction to another in their educational systems, helping them to make appropriate decisions in regard to the appropriate language of teaching and learning.

a level education means: *New Industries from New Places* Neil Gregory, Stanley D. Nollen, Stoyan Tenev, 2009-03-19 Software comes from India, hardware comes from China. Why is that? Why did China and India take such different paths to global dominance in new high-tech industries? Will their paths continue to diverge or converge? How can other countries learn from their successes--and failures--in reaching global scale in new industries? To answer these questions, this book presents the first rigorous comparison of the growth of the IT industries in China and India, based on interviews with over 300 companies. It explains the different growth paths of the software and hardware sectors in each country, providing insights into the factors behind the emergence of China and India as global economic powers. It provides a compelling case study of how differences in economic policies and the investment climate affect industrial growth. This book sheds new light on common debates on 'China versus India', on why India is the software capital of the world while

China is a manufacturing powerhouse. It refutes common myths about the growth of these industries for example, the role of Non-Resident Indians or the Y2K problem in the growth of the Indian software industry, the role of government intervention in industrial growth, and the relative size of China and India's software industries.
