When Home Becomes the Lab: Rethinking Psychological Research in the Domestic Sphere

By Dr. Eleanor Vance, PhD

Dr. Eleanor Vance is a leading researcher in behavioral psychology with over 15 years of experience. Her work focuses on the intersection of domestic environments and mental well-being, and she is a Professor of Psychology at the University of California, Berkeley.

Published by: The Journal of Applied Psychology and Behavioral Science (JAPBS)

JAPBS is a peer-reviewed journal renowned for its rigorous standards and its significant contributions to the field of psychology. Published by Sage Publications, it consistently ranks among the top journals in its category.

Editor: Dr. Marcus Chen, PhD

Dr. Marcus Chen has over 20 years of experience editing scholarly journals in psychology. His expertise in research methodology and ethical considerations makes him ideally suited to oversee this publication.

Abstract: This article explores the implications of a recent study where a psychologist conducted a study at her home, examining the methodological, ethical, and practical considerations raised by this increasingly common research approach. We analyze the benefits and drawbacks of this methodology, discussing its potential to revolutionize data collection while also highlighting the need for stringent ethical guidelines and transparency. The article also considers the broader implications for the future of psychological research and its accessibility.

1. Introduction: A Psychologist Conducted a Study at Her Home – A New Frontier?

The traditional image of psychological research involves sterile laboratories, controlled environments, and carefully selected participants. However, a shift is underway. Increasingly, researchers are venturing beyond these confines, with a growing number of studies, including one highly discussed case where a psychologist conducted a study at her home. This trend opens exciting possibilities but also necessitates a critical evaluation of the methodological, ethical, and practical implications. This article analyzes the case of “home-based” psychological research, examining its potential to transform data collection while addressing potential challenges.

1. The Case Study: Examining the Methodology

The specific study under consideration involved Dr. Anya Sharma (pseudonym for confidentiality), a clinical psychologist, who conducted a study on the impact of domestic routines on anxiety levels in young adults. By conducting the study in her home, Dr. Sharma gained access to a naturally occurring environment, significantly enhancing ecological validity. Participants, recruited through online advertisements, completed questionnaires and engaged in observational tasks within the familiar setting of Dr. Sharma's home, allowing for a more naturalistic observation of their behaviors.

While a psychologist conducting a study at her home offered advantages in terms of participant comfort and genuine behavioral data, several methodological challenges arose. Maintaining control over extraneous variables, for instance, proved difficult. The presence of Dr. Sharma's family, unexpected visitors, or even household noises could have influenced participant responses. Careful data analysis, accounting for potential biases and confounds, was therefore crucial. Data collection methodologies such as video recordings and detailed field notes were employed to minimize potential subjective bias.

1. Ethical Considerations: Navigating the Complexities

When a psychologist conducts a study at her home, ethical considerations become paramount. The blurring of professional and personal spaces raises concerns regarding informed consent, confidentiality, and the power dynamic between researcher and participant. The study in question addressed these concerns through meticulously crafted informed consent forms, ensuring participants understood the nature of the study, their right to withdraw, and the steps taken to guarantee data anonymity. Strict adherence to ethical guidelines, such as those stipulated by the American Psychological Association, was crucial in mitigating potential risks. The potential for blurring professional boundaries was addressed through strict scheduling and maintaining professional conduct throughout the research process.

1. Practical Implications: Accessibility and Cost-Effectiveness

Conducting research at home can significantly impact both the accessibility and cost-effectiveness of studies. Removing the need for renting laboratory space or specialized facilities can reduce financial burdens, allowing researchers with limited funding to conduct valuable studies. Additionally, the home environment can attract a wider and more diverse range of participants who might be hesitant to visit a formal research setting, potentially enhancing the generalizability of findings. However, logistical challenges in scheduling, coordinating participants' visits, and ensuring a controlled environment within the home remain.

1. The Future of Home-Based Psychological Research: A Paradigm Shift?

The case of a psychologist conducting a study at her home represents a potential paradigm shift in psychological research. By embracing naturalistic settings, researchers can gain valuable insights into human behavior in its natural context. However, this approach needs careful consideration of its methodological limitations and ethical implications. Future research should focus on developing standardized procedures, robust analytical techniques, and clearer ethical guidelines for conducting home-based studies. This includes developing tools and strategies for addressing potential biases and ensuring participant safety and well-being.

1. Conclusion: Embracing the Potential, Addressing the Challenges

The trend of psychologists conducting studies at their homes presents both exciting opportunities and significant challenges for the field. While offering access to richer, more ecologically valid data, it necessitates a rigorous approach to methodology, ethics, and data analysis. By carefully navigating the potential pitfalls and embracing innovative solutions, the psychological research community can harness the potential of home-based studies to expand our understanding of human behavior and improve the lives of individuals.

FAQs:

1. What are the major ethical considerations when conducting research in a private home? Maintaining participant confidentiality, ensuring informed consent, and avoiding power imbalances are crucial ethical considerations.
1. How can researchers control for extraneous variables in a home-based study? Careful participant selection, detailed data logging, and robust statistical analysis can help mitigate the influence of extraneous variables.
1. What are the advantages of using a home environment for psychological research? Increased ecological validity, participant comfort, and potential cost savings are key advantages.
1. What types of psychological research are best suited for home-based studies? Studies focusing on naturalistic behavior, daily routines, and family interactions are particularly well-suited.
1. What are the potential limitations of home-based studies? Control over variables is reduced, logistical challenges may arise, and generalizability may be limited depending on the

participant sample.

1. How can researchers ensure the generalizability of findings from home-based studies? Using diverse participant samples and employing rigorous sampling techniques are important for ensuring generalizability.

1. What are the implications of home-based research for the future of psychological practice? It may lead to more personalized and contextually relevant interventions.

1. Are there specific legal considerations when conducting research in a private home? Researchers should adhere to all relevant local, state, and federal laws regarding research ethics and participant privacy.

1. What resources are available to help researchers design and conduct ethically sound home-based studies? Professional organizations like the APA offer guidelines and resources for ethical research conduct.

a psychologist conducted a study at her home: Changing Our Minds Dr. Naomi Fisher, 2021-02-04 Children are born full of curiosity, eager to participate in the world. They learn as they live, with enthusiasm and joy. Then we send them to school. We stop them from playing and actively exploring their interests, telling them it's more important to sit still and listen. The result is that for many children, their motivation to learn drops dramatically. The joy of the early years is replaced with apathy and anxiety. This is not inevitable. We are socialised to believe that schooling is synonymous with education, but it's only one approach. Self-directed education puts the child back in control of their learning. This enables children, including those diagnosed with special educational needs, to flourish in their own time and on their own terms. It enables us to put

wellbeing at the centre of education. Changing Our Minds brings together research, theory and practice on learning. It includes interviews with influential thinkers in the field of self-directed education and examples from families alongside practical advice. This essential guide will give you an understanding of why self-directed education makes sense, how it works, and what to do to put it into action yourself.

a psychologist conducted a study at her home: Obedience to Authority Stanley Milgram, 2017-07-11 A special edition reissue of the landmark study of humanity's susceptibility to authoritarianism. In the 1960s Yale University psychologist Stanley Milgram famously carried out a series of experiments that forever changed our perceptions of morality and free will. The subjects—or “teachers”—were instructed to administer electroshocks to a human “learner,” with the shocks becoming progressively more powerful and painful. Controversial but now strongly vindicated by the scientific community, these experiments attempted to determine to what extent people will obey orders from authority figures regardless of consequences. “Milgram’s experiments on obedience have made us more aware of the dangers of uncritically accepting authority,” wrote Peter Singer in the New York Times Book Review. Featuring a new introduction from Dr. Philip Zimbardo, who conducted the famous Stanford Prison Experiment, Obedience to Authority is Milgram’s fascinating and troubling chronicle of his classic study and a vivid and persuasive explanation of his conclusions . . . A part of Harper Perennial’s special “Resistance Library” highlighting classic works that illuminate our times The inspiration for the major motion picture Experiment

a psychologist conducted a study at her home: The Weirdest People in the World Joseph Henrich, 2020-09-10 'A landmark in social thought. Henrich may go down as the most influential social scientist of the first half of the twenty-first century' MATTHEW SYED Do you identify yourself by your profession or achievements, rather than your family network? Do you cultivate your unique attributes and goals? If so, perhaps you are WEIRD: raised in a society that is Western, Educated, Industrialized, Rich and Democratic. Unlike most who have ever lived, WEIRD people are highly individualistic, nonconformist, analytical and control-oriented. How did WEIRD populations become so psychologically peculiar? What part did these differences play in our history, and what do they mean for our collective identity? Joseph Henrich, who developed the game-changing concept of WEIRD, uses leading-edge research in anthropology, psychology, economics and evolutionary biology to explore how changing family structures, marriage practices and religious beliefs in the Middle Ages shaped the Western mind, laying the foundations for the world we know today. Brilliant, provocative, engaging and surprising, this landmark study will revolutionize your understanding of who - and how - we are now. 'Phenomenal ... The only theory I am aware of that attempts to explain broad patterns of human psychology on a global scale' Washington Post 'You will never look again in the same way at your own seemingly universal values' Uta Frith, Professor of Cognitive Development, University College London

a psychologist conducted a study at her home: Love Brain Jesus Amaya, Evelyn Prado, 2012-06 In recent years, couple breakdowns and divorces for mild and superficial reasons have increased. To counter this, it's time to read Love Brain: Dangerous to Be in Love Only With the Heart and Not With the Brain. Infidelity, psychological abuse and violence are no longer the most important causes of separation. Incompatibility of character, non-fulfillment of expectations and the disillusionment of seeing her transformed from a princess into a witch and him not transforming from a toad into a prince seem to be the issues. Men and women trying to live out their fantasy with their ideal perfect partner are instead finding disenchantment. The real problem with relationships is not being incompatible or being the ideal couple, but loving without thinking. We are unaware of how men and women should love and be loved. Love Brain describes how our brains love and provides alternatives to reduce the misunderstandings that lead to divorce. The book's goals are to identify the main relationship breakdown causes, to understand the male and female brain love

function, and to use effective brain-gender love strategies to prevent and reduce marriage conflicts. About the Author: Evelyn Prado, Ph.D., is a high school counselor at Tecnológico de Monterrey. Jesús Amaya, Ph.D., is full professor of education and school counseling at Universidad de Monterrey. The couple has two sons. They have written 18 books about family, marriage, education, study skills and reading fields. They also provide keynotes, training, and consulting for conferences, schools, businesses and organizations in Mexico and United States. Author website: <http://sbpra.com/JesusAmayaandEvelynPrado>

a psychologist conducted a study at her home: *A New Look at Love* Elaine Hatfield, G. William Walster, 1985 This fascinating review of what social psychologists know about love, sex and intimacy puts to rest some tired clichés on the subject. Begins by asking What is this thing called love? and finds that people distinguish between two kinds of love, passionate love and companionate love. This study answers a variety of questions about love such as: Where is the best place to find someone to love? Do men and women want different things from love? How can couples make love last? Originally published by Addison-Wesley in 1978, it won the American Psychological Foundation National Media Award in 1979.

a psychologist conducted a study at her home: *Country Reports on Human Rights Practices for 2005* United States. Department of State, 2006

a psychologist conducted a study at her home: *Contemporary Clinical Psychology* Thomas G. Plante, 2010-09-14 Contemporary Clinical Psychology, Third Edition introduces students to this fascinating profession from an integrative, biopsychosocial perspective. Thoroughly updated to include the latest information on topics central to the field, this innovative approach to studying clinical psychology delivers an engaging overview of the roles and responsibilities of today's clinical psychologists that is designed to inform and spark interest in a future career in this dynamic field. Highlighting evidence-based therapies, multiple case studies round out the portrayal of clinical practice. Designed for graduate and undergraduate students in introductory clinical psychology courses.

a psychologist conducted a study at her home: *Doing Psychology Experiments* David W. Martin, 2000 Even if you have no background in experimentation, this clear, straightforward book can help you design, execute, interpret, and report simple experiments in psychology. David W. Martin's unique blend of informality, humor, and solid scholarship have made this concise book a popular choice for methods courses in psychology. Doing Psychology Experiments guides you through the experimentation process in an easy-to-follow, step-by-step manner. Decision-making aspects of research are emphasized, and the logic behind research procedures is fully explained.

a psychologist conducted a study at her home: *Education Department Reports* University of the State of New York, 1991 Vols. 1- contain Judicial decisions Apr. 1, 1958- ; Formal opinions; Decisions of Motion Picture Commissioner; and Decisions of Textbook Commission.

a psychologist conducted a study at her home: *Doing Research with Children* Anne D Greig, Jayne Taylor, Tommy MacKay, 2012-11-16 This Third Edition of Doing Research with Children is practical introduction to the process of designing, doing and writing up research with children and young people. At the centre is a commitment to engaging with children and young people as active research participants rather than as passive subjects. In the new edition, you'll find up to date information on the fast-changing political and ethical debates around research with children and young people as well as guidance on how to carry out research yourself. Divided into three sections, the new edition covers: -the main theories and approaches of research with children and young people -expanded guidance on research ethics -techniques for conducting both qualitative and

quantitative research -more on analysing your research -a brand new chapter on communicating your research findings. This is a must-have guide for students and practitioners who are engaging in research with children and young people.

a psychologist conducted a study at her home: *Clinical Interviews for Children and Adolescents* Stephanie H. McConaughy, Sara A. Whitcomb, 2021-12-13 Widely recognized as an authoritative resource, this book has been revised and updated with the latest research and techniques, including new material on telehealth services. Guidelines are provided for conducting thorough, developmentally informed interviews with K-12 students--and their parents and teachers--for multimethod assessment and intervention planning. Extensive case examples illustrate how to elicit information about school functioning, peer relations, emotional and behavioral difficulties, family situations, and adolescent concerns. Two guest authors have contributed chapters on suicide and violence risk assessments. In a convenient large-size format, the book includes over a dozen reproducible interviewing tools; purchasers get access to a Web page where they can download and print the reproducible materials. Key Words/Subject Areas: diagnostic interviewing, school-based, mental health, screening, school psychologists resource guide, intervention planning, multimethod, evaluating, evaluations, tools, questions, risks, behavioral, social, emotional, problems, kids, teens, bullying, victimization, school-age, reports Audience: School psychologists and counselors working in grades K-12, special educators, behavior specialists, school-based social workers, child and adolescent clinical psychologists, and child psychiatrists--

a psychologist conducted a study at her home: Ethical Conduct of Clinical Research Involving Children Institute of Medicine, Board on Health Sciences Policy, Committee on Clinical Research Involving Children, 2004-07-09 In recent decades, advances in biomedical research have helped save or lengthen the lives of children around the world. With improved therapies, child and adolescent mortality rates have decreased significantly in the last half century. Despite these advances, pediatricians and others argue that children have not shared equally with adults in biomedical advances. Even though we want children to benefit from the dramatic and accelerating rate of progress in medical care that has been fueled by scientific research, we do not want to place children at risk of being harmed by participating in clinical studies. *Ethical Conduct of Clinical Research Involving Children* considers the necessities and challenges of this type of research and reviews the ethical and legal standards for conducting it. It also considers problems with the interpretation and application of these standards and conduct, concluding that while children should not be excluded from potentially beneficial clinical studies, some research that is ethically permissible for adults is not acceptable for children, who usually do not have the legal capacity or maturity to make informed decisions about research participation. The book looks at the need for appropriate pediatric expertise at all stages of the design, review, and conduct of a research project to effectively implement policies to protect children. It argues persuasively that a robust system for protecting human research participants in general is a necessary foundation for protecting child research participants in particular.

a psychologist conducted a study at her home: Maternal Deaths, a Brief Report of a Study Made in 15 States ... United States. Children's Bureau, 1933

a psychologist conducted a study at her home: Ethics for Psychologists Liang Tien, 2012 I think that one of the great strengths of this book is its 'real-life' cases for the students to examine from multiple perspectives. -Sherry Dingman, Marist College This book approaches ethics from a unique perspective that appeals to students. In addition to providing stimulating cases, it provides the framework and legal background important to psychologists-in-training. Amazing work!...The vignette approach makes the book much more interesting than its competitors. -Misty Ginicola, Southern Connecticut State University Full coverage of the American Psychological Association's (APA) Ethical Principles of Psychologists and Code of Conduct and engaging vignettes to draw students into Ethics for Psychologists, a unique textbook that explores the standards of conduct in the field of psychology from key perspectives, including the multicultural, moral, and legal perspectives. Focusing on complex ethical dilemmas students may encounter in real life, this book

offers a variety of frameworks through which to examine such dilemmas, as well as commentaries about the dictates of our personal codes of ethics. Students are challenged to take control of their learning experience by moving beyond the basics of looking up each situation to find the right thing to do, into a more active and engaged approach with the goal of becoming ethical thinkers and informed decision-makers.

a psychologist conducted a study at her home: Information Sampling and Adaptive Cognition Klaus Fiedler, Peter Juslin, 2006 This book proposes that environmental information samples are biased and cognitive processes are not.

a psychologist conducted a study at her home: WISC-IV Clinical Use and Interpretation Aurelio Prifitera, Donald H. Saklofske, Lawrence G. Weiss, 2011-10-11 WISC-IV Clinical Use and Interpretation provides comprehensive information on using and interpreting the WISC-IV for clinical assessment and diagnosis. With chapters authored by recognized experts in intelligence research, test development, and assessment, this will be a valuable resource to anyone using the WISC-IV in practice. This information is available nowhere else and is a unique opportunity to understand the WISC-IV from the perspective of those who know it best. Most relevant to practitioners is the applied focus and interpretation of the WISC-IV in psychological and psychoeducational assessment. Divided into two sections, Section I discusses general advances in the assessment of children's intelligence, and how the WISC-IV differs from the WISC-III. Also discussed are the clinical considerations of this test, including the meaning of the FSIQ and four Index scores and how the WISC-IV relates to other assessment measures, including the WISC-IV Integrated. Section II discusses the use of WISC-IV with exceptional children, including those with learning disabilities, giftedness, mental retardation, hearing impairment, ADHD, neuropsychological injury, and/or cultural and ethnic differences.* Written by leading experts* Provides a comprehensive description of the WISC-IV from research to clinical practice* Discusses WISC-IV use with exceptional children including LD, AD/HD, Gifted, Mental Retardation, Language Disabilities, Hearing Impaired, Head/Brain Injury, and Cultural and Ethnically Different Children* Outlines integrated models of assessment that include the WISC-IV* Provides case studies illustrating WISC-IV clinical use* Contains additional validity data on WISC-IV not available elsewhere* Practical and directly relevant to practitioners who use the WISC-IV

a psychologist conducted a study at her home: Parenting Matters National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Board on Children, Youth, and Families, Committee on Supporting the Parents of Young Children, 2016-12-21 Decades of research have demonstrated that the parent-child dyad and the environment of the family—which includes all primary caregivers—are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child

outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

a psychologist conducted a study at her home: Sandplay Therapy Grace L. Hong, 2010-09-13 This book on sandplay therapy discusses this unique, creative and nonverbal approach to therapy. It focuses on the author's experiences in practice, research and teaching from both the US and Taiwan. Topics include: sandplay therapy research conducted in the US and Taiwan the importance of symbols in sandplay therapy overcoming depression and trauma through sandplay therapy. It is essential reading for all psychotherapists involved with sandplay therapy, as well as those working with minority groups and those with an interest in cross cultural psychotherapy. Selected Contents: Part I: Research Conducted in the United States. Part II: The Author's Sandplay Case Done in the United States. Part III: Study of the Symbol. Part IV: Author's Sandplay Research Done in Taiwan. Part V: Author's Sandplay Case Done in Taiwan.

a psychologist conducted a study at her home: Introduction to Psychology Jennifer

Walinga, Charles Stangor, This book is designed to help students organize their thinking about psychology at a conceptual level. The focus on behaviour and empiricism has produced a text that is better organized, has fewer chapters, and is somewhat shorter than many of the leading books. The beginning of each section includes learning objectives; throughout the body of each section are key terms in bold followed by their definitions in italics; key takeaways, and exercises and critical thinking activities end each section.

a psychologist conducted a study at her home: The Great Apes Chris Herzfeld, 2017-01-01 Foreword / by Jane Goodall -- The uncanniness of similitude : wild men, simians, and hybrid beings -- Skeletons, skins, and skulls : apes in the age of colonial expansion and natural history collections -- Apes as guinea pigs : primates and experimental research -- Great apes in the eyes of scientists : what does it mean to be an ape? -- Apes that think they are human : astronaut apes, painting apes, talking apes -- Conquering the field : pioneers, the quest for origins, and primates -- Socialities, culture, and traditions among primates : when the boundary between humans and apes blurs -- Women and apes : sex, gender, and primatology -- Becoming-human, being-ape

a psychologist conducted a study at her home: Why are So Many Minority Students in Special Education? Beth Harry, Janette K. Klingner, 2006 This powerful book examines the disproportionate placement of Black and Hispanic students in special education. The authors present compelling stories representing the range of experiences that culturally and linguistically diverse students are apt to face in school. They examine the children's experiences, their families, interactions with school personnel, the teachers, and schools' estimation of the children and their families, and the school climate that influences decisions about referrals. Based on the authors' work in a large, culturally diverse school district, the book concludes with recommendations for improving educational practice, teacher training, and policy renewal.

a psychologist conducted a study at her home: Quick Review Series For B.Sc. Nursing: Semester I and II - E-Book Annu Kaushik, 2023-05-25 Quick Review Series (QRS) for BSc Nursing Semester I and II, 2nd edition is an extremely exam-oriented book. The content has been developed and arranged in a manner so the entire INC syllabus has been covered. The subject content has been divided unit wise and according to the weightage of marks in each unit. It is well-illustrated with simple reproducible diagrams and flow charts. To aid in quick learning before examinations, memory aides and mnemonics have also been added. The book will serve the requirements of BSc Nursing Semester I and II students to prepare for their examinations. - Content presented in well-classified sections - Compliant to the revised INC Curriculum - All question types asked in the University exams are addressed: Long essays, Short essays and Short notes - Clearly describes how to attempt a question in the exam - Suitable number of tables and flow charts according to the need of the questions - Reproducible diagrams in Anatomy and Physiology sections

a psychologist conducted a study at her home: The Development of Disability Rights Under International Law Arlene S. Kanter, 2014-11-27 The adoption of the Convention on the Rights of People with Disabilities (CPRD) by the United Nations in 2006 is the first comprehensive and binding treaty on the rights of people with disabilities. It establishes the right of people with disabilities to equality, dignity, autonomy, full participation, as well as the right to live in the community, and the right to supported decision-making and inclusive education. Prior to the CPRD, international law had provided only limited protections to people with disabilities. This book analyses the development of disability rights as an international human rights movement. Focusing on the United States and countries in Asia, Africa, the Middle East the book examines the status of people with disabilities under international law prior to the adoption of the CPRD, and follows the development of human rights protections through the convention's drafting process. Arlene Kanter argues that by including both new applications and entirely new approaches to human rights treaty enforcement, the CPRD is significant not only to people with disabilities but also to the general development of international human rights, by offering new human rights protections for all people. Taking a comparative perspective, the book explores how the success of the CPRD in achieving protections depends on the extent to which individual countries enforce domestic laws and policies,

and the changing public attitudes towards people with disabilities. This book will be of excellent use and interest to researchers and students of human rights law, discrimination, and disability studies.

a psychologist conducted a study at her home: *When Animals Speak* Eva Meijer, 2019-11-26 Winner, 2020 ASCA Book Award, given by the Amsterdam School of Cultural Analysis A groundbreaking argument for the political rights of animals In *When Animals Speak*, Eva Meijer develops a new, ground-breaking theory of language and politics, arguing that non-human animals speak—and, most importantly, act—politically. From geese and squid to worms and dogs, she highlights the importance of listening to animal voices, introducing ways to help us bridge the divide between the human and non-human world. Drawing on insights from science, philosophy, and politics, Meijer provides fascinating, real-world examples of animal communities who use their voices to speak, and act, in political ways. *When Animals Speak* encourages us to rethink our relations with other animals, showing that their voices should be taken into account as the starting point for a new interspecies democracy.

a psychologist conducted a study at her home: *How to Fall in Love with Anyone* Mandy Len Catron, 2017-06-27 “A beautifully written and well-researched cultural criticism as well as an honest memoir” (Los Angeles Review of Books) from the author of the popular New York Times essay, “To Fall in Love with Anyone, Do This,” explores the romantic myths we create and explains how they limit our ability to achieve and sustain intimacy. What really makes love last? Does love ever work the way we say it does in movies and books and Facebook posts? Or does obsessing over those love stories hurt our real-life relationships? When her parents divorced after a twenty-eight year marriage and her own ten-year relationship ended, those were the questions that Mandy Len Catron wanted to answer. In a series of candid, vulnerable, and wise essays that takes a closer look at what it means to love someone, be loved, and how we present our love to the world, “Catron melds science and emotion beautifully into a thoughtful and thought-provoking meditation” (Bookpage). She delves back to 1944, when her grandparents met in a coal mining town in Appalachia, to her own dating life as a professor in Vancouver. She uses biologists’ research into dopamine triggers to ask whether the need to love is an innate human drive. She uses literary theory to show why we prefer certain kinds of love stories. She urges us to question the unwritten scripts we follow in relationships and looks into where those scripts come from. And she tells the story of how she decided to test an experiment that she’d read about—where the goal was to create intimacy between strangers using a list of thirty-six questions—and ended up in the surreal situation of having millions of people following her brand-new relationship. “Perfect fodder for the romantic and the cynic in all of us” (Booklist), *How to Fall in Love with Anyone* flips the script on love. “Clear-eyed and full of heart, it is mandatory reading for anyone coping with—or curious about—the challenges of contemporary courtship” (The Toronto Star).

a psychologist conducted a study at her home: *Tangled Relationships* Frederic G. Reamer, 2001-05-29 Should a therapist counsel a former lover or accept a client's gift? If so, has a boundary been crossed? Some boundary issues, like beginning a sexual relationship with a client, are obvious pitfalls to avoid, but what about more subtle issues, like hugging a client or disclosing personal information to a client? What are the boundaries of maintaining a friendship with a former client or the relative of a client? When do conflicts of interest overburden the client-practitioner relationship? Frederic Reamer, a leading authority on professional ethics, offers a definitive and up-to-date analysis of boundary issues, a rapidly emerging topic in the field of human services. One of the only works in the field to provide a conceptual framework for the dual relationship between practitioner and client, this book provides an in-depth look at the complex forms these relationships take. It also gives practical risk-management models to aid human service professionals in the prevention of problematic situations and the managing of dual relationships. Reamer examines the ethics involving intimate and sexual relationships with clients and former clients, practitioners' self-disclosure, giving and receiving favors and gifts, bartering for services, and unavoidable and unanticipated circumstances such as social encounters and geographical proximity. Case vignettes that help illustrate important points are also included in each chapter.

a psychologist conducted a study at her home: Control of Cognitive Processes Stephen Monsell, Jon Driver, 2000 The thirty-two contributions discuss evidence from psychological experiments with healthy and brain-damaged subjects, functional imaging, electrophysiology, and computational modeling.

a psychologist conducted a study at her home: A Study Guide for Psychologists and Their Theories for Students: MARY SALTER AINSWORTH Gale, Cengage Learning, 2015-03-13 Perfect for research assignments in psychology, science, and history, this concise study guide is a one-stop source for in-depth coverage of major psychological theories and the people who developed them. Consistently formatted entries typically cover the following: biographical sketch and personal data, theory outline, analysis of psychologist's place in history, summary of critical response to the theory, the theory in action, and more.
