abim number of questions: Rheum for Improvement Mark Lopatin, 2022-01-15 Rheum for Improvement is a physician's account of how corporate medicine has transformed health care from a human interaction between a patient and their physician into a business transaction between a consumer and a provider. It is also a personal story of how frivolous legal action triggered that physician to become an outspoken advocate for health-care reform. It will be of interest to anyone who interacts with our health-care system, but especially physicians, who must navigate bureaucratic obstacles on a daily basis. As a patient, have you ever: --Had your health insurance deny a test or procedure that your doctor recommended by saying that it was not medically necessary? --Been told that you had to try one medicine before you could take the medicine that your doctor actually prescribed? --Had a procedure done that was covered by your insurer, only to receive a separate bill afterwards that you were not expecting? --Felt that your doctor has their nose buried in a computer instead of paying attention to you? If so, you are not alone. Rheum for Improvement addresses these and many other health-care issues that compromise the care that physicians can provide. It is a must read for anyone who has ever been or ever will be a patient.

abim number of questions: Education Scholarship in Healthcare April S. Fitzgerald, Gundula

Bosch, 2023-11-28 Academic medical centers continue to require evidence of scholarly activity for their faculty to maintain their appointment and to advance in promotion/rank. For some, training to know how to obtain evidence of scholarship was obtained through fellowship where information was passed from mentor to mentee in an apprenticeship fashion without a formalized text to follow to obtain the information. In fellowship, information might flow through word-of-mouth or articles handed down out to a mentee. Others in fellowship develop skills by taking classes as part of an additional master's degree program such as a Master of Public Health. For health professionals who enter an academic institution without having gone through a fellowship program, they are still expected to perform scholarly activity but don't have the benefit of having done the apprenticeship to learn the skills, so unless they decide to find a course, obtain a master's degree, or find a fellowship, they have no way to gain the necessary skills and are at risk of losing their appointment and have no hope of progressing in promotion. This text provides a comprehensive toolbox for the academic who needs these skills to survive. It serves as a valuable resource for health professionals – physicians, nurses, pharmacists, physical therapists, and allied professionals – as well as scientists, and students, with the steps necessary to take their educational endeavors from idea to implementation through dissemination. Beginning with the concept of “What is Scholarship”, the authors walk the reader through the concepts of how to find your niche, look through the literature to check for a gap, design a question, consider evaluation and outcomes, be aware of ethical considerations, plan a project, look for support, find mentorship, prepare an abstract, present a poster, disseminate a project, and lead a team. All chapters are written by experts in the subject matter.
