abo certification study guide: Optician Essentials and Advanced Exam Practice Test

Erich W. Mack, 2013-12-08 Success as a professional optician starts with this text. This guide is an invaluable source for learning more advanced ophthalmic optics, basic business principals, troubleshooting patient problems and solving some of the more tricky optics quandaries. This text reviews the more advanced topics seen on ABO and ABO Advanced exams. Also included are overviews on new topics such as, expanded infection types, additional optics equations, and vision therapy. For those planning on taking the advanced level ABO exam there is included a 198 question practice test and answer key. The practice questions are based on the most recent exam topics. Excerpts: It is difficult, perhaps impossible, to pinpoint when the first corrective lens was created. The history of optics and spectacles dates back very far in time, before a written history and involves a variety of characters. The earliest lens called the Nimrud lens could date back as far as 7000 B.C.. Current theory states that ancient Mesopotamians called Assyrians manufactured the Nimrud lens, which is a magnifying lens, to help them carve intricate patterns. On the other hand, the Nimrud lens could be what is called a burning glass and used to start fires and not a occupational aid lens at all. Either way the rock crystal Nimrud lens has a 3x magnification power and is the oldest lens of any type that we know of. At the time of this writing it is being housed and displayed at the British Royal museum and worth seeing for yourself. Another possible early lens can be traced through written account to Nero of ancient Rome. Its accepted as fact that he was quite myopic, but a tantalizing theory also states he used a polished emerald to peer through while watching gladiatorial games. Could this be the first myopic (-) corrective lens? As an optician it is your job to be an expert in this exciting field and you also have the honor of being part of its history. With the evolution of mass produced frames, inexpensive advanced lenses, and an online marketplace it more important than ever to stay abreast of the future of ophthalmics and understand its past. For opticianry to continue to thrive it is vital to position yourself as the definitive professional. This will allow you to separate yourself from the online marketplace and embrace the opportunity to profitably offer products tailored to your patrons needs. Business: Most business plans are structured into seven sections. A completed business plan should be shared with employees to create a cohesive team focus. Also investors will request to see the business plan to determine the risk of failure or likelihood of success. The seven sections are: 1. Executive Summary - A concise summation or outline of the business plan. Usually this part is written last, as it is the most important section. Some items that are mentioned in the executive summary are: business name, concept, products/services, mission statement, financial requirements, and essential milestones. 2. Company Description - This is a broad view of your company, how it is structured, and type of business it will perform. Some items mentioned in the Company Profile are: legal form of business, needs the business will satisfy, brief history, overview of products and customers, short/long term goals. 3. Products/Services - A description of how you will turn a profit (aka, what are you selling?). Pictures, diagrams, and prototypes are often required. Suppliers, costs, and net revenue expected for each product are discussed here. 4. Market Analysis/Economics - Outline your market research here and present your conclusions about your market analysis. Include market size, trends, patterns, and potential growth here... Exam: 83. What two glands contribute to the lipid tear layer? a. Zeis/Meibomian b. Zeis/Moll c. bulbar conjunctiva / lacrimal d. lacrimal / Krauss

abo certification study guide: Realising REDD+ Arild Angelsen, 2009-01-01 REDD+ must be transformational. REDD+ requires broad institutional and governance reforms, such as tenure, decentralisation, and corruption control. These reforms will enable departures from business as usual, and involve communities and forest users in making and implementing policies that affect them. Policies must go beyond forestry. REDD+ strategies must include policies outside the forestry sector narrowly defined, such as agriculture and energy, and better coordinate across sectors to deal with non-forest drivers of deforestation and degradation. Performance-based payments are key, yet limited. Payments based on performance directly incentivise and compensate forest owners and users. But schemes such as payments for environmental services (PES) depend on conditions, such as secure tenure, solid carbon data and transparent governance, that are often lacking and take time to change. This constraint reinforces the need for broad institutional and policy reforms. We must learn from the past. Many approaches to REDD+ now being considered are similar to previous efforts to conserve and better manage forests, often with limited success. Taking on board lessons learned from past experience will improve the prospects of REDD+ effectiveness. National circumstances and uncertainty must be factored in. Different country contexts will create a variety of REDD+ models with different institutional and policy mixes. Uncertainties about the shape of the future global REDD+ system, national readiness and political consensus require flexibility and a phased approach to REDD+ implementation.

abo certification study guide: Transfusion Medicine, Apheresis, and Hemostasis Huy P. Pham, Lance A. Williams III, 2017-09-15 Transfusion Medicine, Apheresis, and Hemostasis: Review Questions and Case Studies is the collaborative effort that spanned a time period of 2 years and included 50 experts, many whom are national leaders in their respected fields. It also represents the passion and privilege we feel to teach the next generation of physicians in Transfusion Medicine and Apheresis. The main goal for this book is to help the readers build a solid foundation of both basic and advanced conceptual knowledge to prepare for the American Board of Pathology (ABP) certification exam in Transfusion Medicine. This book is not intended to be a substitute for textbooks, original research or review articles, and/or clinical training. Further, since the field of medicine, both from a scientific and regulatory perspective, rapidly changes, the readers are advised to continuously update their knowledge by attending national meetings and reading clinical journals. To equip the readers with the basic knowledge in critical reading and data analysis, which is an essential skill in daily medical practice, a novel chapter titled Data Interpretation in Laboratory Medicine was included in this book. In this chapter, the readers are asked to make logical conclusions based on the given data and/or statistical results. Moreover, there is also a chapter on Practical Calculations in Transfusion Medicine, Apheresis, and Hemostasis to help consolidate all the necessary formulas commonly used in daily practice for easy reference. These chapters are unique

to our book and will not be found in any other currently on the market. All of the questions in this book were originally created by the authors of each chapter. Each question can either be standalone or part of a case scenario representing challenge cases in Transfusion Medicine, Apheresis, and Hemostasis. These questions often represent both rare and common clinical scenarios that the authors have seen during their clinical practice. Each question is then followed by 5 possible answers, with only one being correct (or the best answer). After the question, there is a conceptual explanation followed by a more factual explanation of the right and wrong answers. We gave the individual authors the freedom to choose how they explained the wrong answer choices. Some authors chose to be more direct (e.g. Answer A is incorrect because...), while other authors chose a more conversational style (e.g. Human resources (answer A) includes staffing, selection, orientation, training, and competency assessment of employees). This format is designed to help the student linking the conceptual and factual knowledge together to form a solid foundation for use in clinical practice. At the end of each chapter, there is a list of articles and textbooks that will prove useful to the motivated student who wishes to become an expert in the field. Another special feature to our textbook is the presence of a pre-test and post-test, which are provided to help the readers with self-assessment. As stated above, the main focus of this book is to help the readers preparing for the ABP certification exam in Transfusion Medicine. However, due to the interdisciplinary nature of the field of Transfusion Medicine, Apheresis, and Hemostasis, we believe that this book is also beneficial to and can be used by all clinicians involved in the management of complex transfusion, apheresis, and hemostasis issues, such as hematologists, anesthesiologists, surgeons, and critical care physicians. We further believe that it is a helpful guide for these specialists to prepare for their own specialty certification exam, when the topics are related to Transfusion Medicine, Apheresis, and Hemostasis.
