As a professor at Yale, William Deresiewicz saw something that troubled him deeply. His students, some of the nation's brightest minds, were adrift when it came to the big questions: how to think critically and creatively and how to find a sense of purpose. Now he argues that elite colleges are turning out conformists without a compass. *Excellent Sheep* takes a sharp look at the high-pressure conveyor belt that begins with parents and counselors who demand perfect grades and culminates in the skewed applications Deresiewicz saw firsthand as a member of Yale's admissions committee. As schools shift focus from the humanities to "practical" subjects like economics, students are losing the ability to think independently. It is essential, says Deresiewicz, that college be a time for self-discovery when students can establish their own values and measures of success in order to forge their own paths. He features quotes from real students and graduates he has corresponded with over the years, candidly exposing where the system is broken and offering clear solutions on how to fix it. "Excellent Sheep is likely to make...a lasting mark....He takes aim at just about the entirety of upper-middle-class life in America....Mr. Deresiewicz's book is packed full of what he wants more of

in American life: passionate weirdness” (The New York Times).

accelerated management program yale: The Hero's Farewell Jeffrey Sonnenfeld, 1991-02-07 How a business replaces its chief executive often determines that firm's future. If a business does not effectively manage the transfer of power, utter turmoil can result, with profound implications not only for the CEO, but also for the other employees, the shareholders, and the community at large. Filled with inside stories from corporate boardrooms and fresh conceptual perspectives, *The Hero's Farewell* describes in rich detail the factors that affect executive succession. Jeffrey Sonnenfeld offers the first close examination of the critical role a CEO's departure style plays in helping, or hindering, the transfer of power. Through candid interviews with fifty prominent retired chief executives from corporations such as AT&T, Ford, Dupont, United

Technologies, and Raytheon (David Rockefeller of Chase Manhattan and Thomas J. Watson, Jr. of IBM among them) and a survey of an additional three hundred top managers, Sonnenfeld identifies the four major types of leadership departure styles. These types include Monarchs, who choose not to leave voluntarily but either die in office or are overthrown; Generals, who leave reluctantly and spend their retirement planning a comeback; Ambassadors, who retain close ties with their former firms; and Governors, who willingly serve a limited time and leave to pursue new interests. Capturing the human drama of these departures and succession battles, *The Hero's Farewell* will fascinate anyone intrigued by power struggles in large corporations. Outlining ways to smooth out the inevitable transfers of power that corporations must face, Sonnenfeld presents essential information for all top executives and especially for CEOs.

accelerated management program yale: *Design* Jessica Helfand, 2016-01-01 A compelling defense for the importance of design and how it shapes our behavior, our emotions, and our lives Design has always prided itself on being relevant to the world it serves, but interest in design was once limited to a small community of design professionals. Today, books on design thinking are best sellers, and computer and Web-based tools have expanded the definition of who practices design. Looking at objects, letterforms, experiences, and even theatrical performances, award-winning author Jessica Helfand asserts that understanding design's purpose is more crucial than ever. Design is meaningful not because it is pretty but because it is an intrinsically humanist discipline, tethered to the very core of why we exist. For example, as designers collaborate with developing nations on everything from more affordable lawn mowers to cleaner drinking water, they must take into consideration the full range of a given community's complex social needs. Advancing a conversation that is unfolding around the globe, Helfand offers an eye-opening look at how designed things make us feel as well as how--and why--they motivate our behavior.

accelerated management program yale: *The President and Immigration Law* Adam Cox, Cristina M. Rodríguez, 2020 When President Barack Obama announced his plans to shield millions of immigrants from deportation, Congress and the commentariat pilloried him for acting unilaterally. When President Donald Trump attempted to ban immigration from six predominantly Muslim counties, a different collection of critics attacked the action as tyrannical. Beneath this polarized political resistance lies a widely shared belief: that Congress, not the President, makes our immigration policies, dictating who can come to the United States, and who can stay, in a detailed and comprehensive legislative code. In *The President and Immigration Law*, Adam Cox and Cristina Rodríguez shatter the myth that Congress controls immigration policy. Drawing on a wide range of sources-rich historical materials, unique data on immigration enforcement, and insider accounts of our nation's massive immigration bureaucracy-they tell the story of how the President became our immigration policymaker-in-chief over the course of two centuries. From founding-era debates over the Alien and Sedition Acts to Jimmy Carter's intervention during the Mariel boatlift from Cuba, presidential crisis management has played an important role in this story. Far more foundational, however, has been the ordinary executive obligation to enforce the law. Over time, the power born of that duty has become the central vehicle for making immigration policy in the United States. A pathbreaking account of the President's relationship to Congress, Cox and Rodríguez's analysis helps us better understand how the United States ended up running an enormous shadow immigration system-one in which nearly half of all noncitizens living in America are here in violation of the law. It also provides a blueprint for reform, one that accepts rather than laments the role the President plays in shaping the national community, while outlining strategies to curb the abuse of law enforcement authority in immigration and beyond.

neighborhood groceries, parish halls, factories, and even saloons contribute more to urban vitality than did the fiscal might of postwar urban renewal? With a novelist's eye for telling detail, Douglas Rae depicts the features that contributed most to city life in the early "urbanist" decades of the twentieth century. Rae's subject is New Haven, Connecticut, but the lessons he draws apply to many American cities. *City: Urbanism and Its End* begins with a richly textured portrait of New Haven in the early twentieth century, a period of centralized manufacturing, civic vitality, and mixed-use neighborhoods. As social and economic conditions changed, the city confronted its end of urbanism first during the Depression, and then very aggressively during the mayoral reign of Richard C. Lee (1954-70), when New Haven led the nation in urban renewal spending. But government spending has repeatedly failed to restore urban vitality. Rae argues that strategies for the urban future should focus on nurturing the unplanned civic engagements that make mixed-use city life so appealing and so civilized. Cities need not reach their old peaks of population, or look like thriving suburbs, to be once again splendid places for human beings to live and work.

accelerated management program yale: *Vaccination Ethics and Policy* Jason L. Schwartz, Arthur L. Caplan, 2021-08-24 A comprehensive overview of important and contested issues in vaccination ethics and policy by experts from history, science, policy, law, and ethics. Vaccination has long been a familiar, highly effective form of medicine and a triumph of public health. Because vaccination is both an individual medical intervention and a central component of public health efforts, it raises a distinct set of legal and ethical issues—from debates over their risks and benefits to the use of government vaccination requirements—and makes vaccine policymaking uniquely challenging. This volume examines the full range of ethical and policy issues related to the development and use of vaccines in the United States and around the world. Forty essays, articles, and reports by experts in the field look at all aspects of the vaccine life cycle. After an overview of vaccine history, they consider research and development, regulation and safety, vaccination promotion and requirements, pandemics and bioterrorism, and the frontier of vaccination. The texts cover such topics as vaccine safety controversies; the ethics of vaccine trials; vaccine injury compensation; vaccine refusal and the risks of vaccine-preventable diseases; equitable access to vaccines in emergencies; lessons from the eradication of smallpox; and possible future vaccines against cancer, malaria, and Ebola. The volume intentionally includes texts that take opposing viewpoints, offering readers a range of arguments. The book will be an essential reference for professionals, scholars, and students. accelerated management program yale: *How Tobacco Smoke Causes Disease* United States. Public Health Service. Office of the Surgeon General, 2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing

the potential risks of tobacco products.

accelerated management program yale: **Immunoepidemiology** Peter J. Krause, Paula B. Kavathas, Nancy H. Ruddle, 2019-10-24 This textbook focuses on the nascent field of Immunoepidemiology that addresses how differences in immune responses among individuals affect the epidemiology of infectious diseases, cancer, hypersensitivity, and autoimmunity. The idea for the book originated from a course entitled “Immunology for Epidemiologists” at the Yale School of Public Health. While many fine textbooks are available that address the immunological responses of individuals to pathogens, these provided very little information regarding how immunological variation among populations affects the epidemiology of disease. And yet, it has long been recognized that there is great immunologic diversity among people, which can have a profound effect on the epidemiology of disease. Careful review of the immunologic and epidemiologic literature revealed that there have been relatively few publications concerning immunoepidemiology and that no textbook is available on the subject. This textbook therefore aims to fill this void by providing a much-needed tool to comprehensively and efficiently teach immunoepidemiology. The book includes a section on the basic principles of immunology, and then applies them to particular examples of disease in human populations. The target audience for this text book are Masters of Public Health students. Others who should also find it of interest include PhD students in epidemiology, immunology, medical students, generalists, and specialists in immunology, infectious diseases, cancer, and rheumatology.

accelerated management program yale: **If Our Bodies Could Talk** James Hamblin, 2017-12-12 If you want to understand the strange workings of the human body, and the future of medicine, you must read this illuminating, engaging book. —Siddhartha Mukherjee, author of *The Gene* In 2014, James Hamblin launched a series of videos for *The Atlantic* called *If Our Bodies Could Talk*. With it, the doctor-turned-journalist established himself as a seriously entertaining authority in the field of health. Now, in illuminating and genuinely funny prose, Hamblin explores the human stories behind health questions that never seem to go away—and which tend to be mischaracterized and oversimplified by marketing and news media. He covers topics such as sleep, aging, diet, and much more: • Can I “boost” my immune system? • Does caffeine make me live longer? • Do we still not know if cell phones cause cancer? • How much sleep do I actually need? • Is there any harm in taking a multivitamin? • Is life long enough? In considering these questions, Hamblin draws from his own medical training as well from hundreds of interviews with distinguished scientists and medical practitioners. He translates the (traditionally boring) textbook of human anatomy and physiology into accessible, engaging, socially contextualized, up-to-the-moment answers. They offer clarity, examine the limits of our certainty, and ultimately help readers worry less about things that don’t really matter. *If Our Bodies Could Talk* is a comprehensive, illustrated guide that entertains and educates in equal doses.

accelerated management program yale: **Extrastatecraft** Keller Easterling, 2014-11-04

Extrastatecraft is the operating system of the modern world: the skyline of Dubai, the subterranean pipes and cables sustaining urban life, free-trade zones, the standardized dimensions of credit cards, and hyper-consumerist shopping malls. It is all this and more. Infrastructure sets the invisible rules that govern the spaces of our everyday lives, making the city the key site of power and resistance in the twenty-first century. Keller Easterling reveals the nexus of emerging governmental and corporate forces buried within the concrete and fiber-optics of our modern habitat.

Extrastatecraft will change how we think about cities-and, perhaps, how we live in them.
