'The best place to start to learn about the very greatest economists of all time' Professor Tyler Cowen, author of *The Complacent Class* and *The Great Stagnation* _____ Since the days of Adam Smith, economists have grappled with a series of familiar problems -- but often their ideas are hard to digest, before we even try to apply them to today's issues. Linda Yueh is renowned for her combination of erudition, as an accomplished economist herself, and accessibility, as a leading writer and broadcaster in this field; and in *The Great Economists* she explains the key thoughts of history's greatest economists, how their lives and times affected their ideas, how our lives have been influenced by their work, and how they could help with the policy challenges that we face today. In the light of current economic problems, and in particular economic growth, Yueh explores the thoughts of economists from Adam Smith and David Ricardo through Joan Robinson and Milton Friedman to Douglass North and Robert Solow. Along the way she asks, for example: what do the ideas of Karl Marx tell us about the likely future for the Chinese economy? How does the work of John Maynard Keynes, who argued for government spending to create full employment, help us think about state investment? And with globalization in trouble, what can we learn about handling Brexit and Trumpism? In one accessible volume, this expert new voice provides an overarching guide to the biggest questions of our time. *The Great Economists* includes: Adam Smith David Ricardo Karl Marx Alfred Marshall Irving Fisher John Maynard Keynes Joseph Schumpeter Friedrich Hayek Joan Robinson Milton Friedman Douglass North Robert Solow _____ 'Economics students, like others, can learn a lot from this book' - Professor Paul Collier, author of *The Bottom Billion* 'Not only a great way to learn in an easily readable manner about some of the greatest economic influences of the past, but also a good way to test your own a priori assumptions about some of the big challenges of our time' - Lord Jim O'Neill, former Chairman at Goldman Sachs Asset Management, former UK Treasury Minister, and author of *The Growth Map* 'An extremely engaging survey of the lifetimes and ideas of the great thinkers of economic history' - Professor Kenneth Rogoff, author of *The Curse of Cash* and co-author of *This Time is Different* 'This book is a very readable introduction to the lives and thinking of the greats' - Professor Raghuram Rajan, former Governor of the Reserve Bank of India, and author of *I Do What I Do* and *Fault Lines* 'Read it not only to learn about the world's great economists, but also to see how consequential thought innovations can be, and have been' - Mohamed el-Erian, Chief Economic Adviser at Allianz, former CEO of PIMCO

It also gained immediate renown as a "most beautiful" experiment whose beauty was tied to its simplicity. Yet the investigative path that led to the experiment was anything but simple, Frederic L. Holmes shows in this masterful account of Meselson and Stahl's quest. This book vividly reconstructs the complex route that led to the Meselson-Stahl experiment and provides an inside view of day-to-day scientific research--its unpredictability, excitement, intellectual challenge, and serendipitous windfalls, as well as its frustrations, unexpected diversions away from original plans, and chronic uncertainty. Holmes uses research logs, experimental films, correspondence, and interviews with the participants to record the history of Meselson and Stahl's research, from their first thinking about the problem through the publication of their dramatic results. Holmes also reviews the scientific community's reception of the experiment, the experiment's influence on later investigations, and the reasons for its reputation as an exceptionally beautiful experiment.

Within weeks she was out on the hill with him in Wales, learning the language of dry-stone walling. Far away from the pressures of her old life, she found deep satisfaction in working with her hands, in the age and heft of the stones, and the ring of the hammer. Out under the open sky, Whitney relished every sore muscle and smashed finger, opportunity to stand atop a wall she'd just built and feel like the strongest woman alive. Between Stone and Sky is a celebration of the raw and rugged splendour of the Welsh countryside and the enduring beauty and relevance of traditional craftsmanship. It is an unflinchingly honest account of the emotional struggle to become and belong. Most of all, it is an empowering story of female friendship, accepting uncertainty and risk, and crossing oceans in pursuit of dreams.

In this guide to the immediate and long-term effects of psychedelic use for spiritual (high dose), therapeutic (moderate dose), and problem-solving (low dose and microdose) purposes, Fadiman outlines best practices for safe, sacred entheogenic voyages learned through his more than 40 years of experience--from the benefits of having a sensitive guide during a session (and how to be one) to the importance of the setting and pre-session intention. Fadiman reviews the newest as well as the neglected research into the psychotherapeutic value of visionary drug use for increased personal awareness and a host of serious medical conditions, including his recent study of the reasons for and results of psychedelic use among hundreds of students and professionals. He reveals new uses for LSD and other psychedelics, including microdosing, extremely low doses, for improved cognitive functioning and emotional balance. Cautioning that psychedelics are not for everyone, he dispels the myths and misperceptions about psychedelics circulating in textbooks and clinics as well as on the internet. Exploring the life-changing experiences of Ram Dass, Timothy Leary, Aldous Huxley, and Huston Smith as well as Francis Crick and Steve Jobs, Fadiman shows how psychedelics, used wisely, can lead not only to healing but also to scientific breakthroughs and spiritual epiphanies.

Over the past decade, the number of 12- to 17-year-olds suffering from mental health disorders has more than doubled. While adolescents and teens are notorious for mood swings and rebellion, parents today are navigating new terrain as their children are increasingly at risk of struggling with a mental health issue. But the question remains: What is causing this epidemic of illness? In *Brain Inflamed*, acclaimed integrative doctor Dr Kenneth Bock shares a revolutionary new view of adolescent and teen mental health - one that suggests many of the mental disorders most common among this population (including depression, anxiety, and OCD) may share the same underlying mechanism: systemic inflammation. In this groundbreaking work, Dr Bock explains the essential role of the immune system and the microbiome in mental health, detailing the ways in which imbalances in these systems - such as autoimmune conditions, thyroid disorders, or leaky gut syndrome - can generate neurological inflammation. While most conventional doctors assume that teens' psychological struggles can be resolved only with therapy and psychotropic drugs, Dr. Bock's approach considers the whole-body health of his patients. In his integrative evaluations, he often uncovers triggers such as gluten sensitivity, adrenal dysfunction, Lyme disease, and post-strep infections - all of which create imbalances in the body that can generate psychological symptoms. Filled with incredible stories from Dr. Bock's more than thirty years as a practising physician, *Brain Inflamed* explains the biological underpinnings of many common mental health issues, and empowers the parents and family members of struggling teens with practical advice - and perhaps most importantly, hope for a brighter future.

access physical therapy saugerties: Expanded Cinema Gene Youngblood, 2020-03-03 Fiftieth anniversary reissue of the founding media studies book that helped establish media art as a cultural category. First published in 1970, Gene Youngblood's influential *Expanded Cinema* was the first serious treatment of video, computers, and holography as cinematic technologies. Long considered the bible for media artists, Youngblood's insider account of 1960s counterculture and the birth of cybernetics remains a mainstay reference in today's hypermediated digital world. This fiftieth anniversary edition includes a new Introduction by the author that offers conceptual tools for understanding the sociocultural and sociopolitical realities of our present world. A unique eyewitness account of burgeoning experimental film and the birth of video art in the late 1960s, this far-ranging study traces the evolution of cinematic language to the end of fiction, drama, and realism. Vast in scope, its prescient formulations include "the paleocybernetic age," "intermedia," the "artist as design scientist," the "artist as ecologist," "synaesthetics and kinesthetics," and "the technosphere: man/machine symbiosis." Outstanding works are analyzed in detail. Methods of production are meticulously described, including interviews with artists and technologists of the period, such as Nam June Paik, Jordan Belson, Andy Warhol, Stan Brakhage, Carolee Schneemann, Stan VanDerBeek, Les Levine, and Frank Gillette. An inspiring Introduction by the celebrated polymath and designer R. Buckminster Fuller—a perfectly cut gem of countercultural thinking in itself—places Youngblood's radical observations in comprehensive perspective. Providing an unparalleled historical documentation, *Expanded Cinema* clarifies a chapter of countercultural history that is still not fully represented in the arthistorical record half a century later. The book will also inspire the current generation of artists working in ever-newer expansions of the cinematic environment and will prove invaluable to all who are concerned with the technologies that are reshaping the nature of human communication.
