accounting and financial ratios expanding the vintage lily: Bio-Inspired Innovation and National Security National Defense University, 2010-10 Despite the vital importance of the emerging area of biotechnology and its role in defense planning and policymaking, no definitive book has been written on the topic for the defense policymaker, the military student, and the private-sector bioscientist interested in the emerging opportunities market of national security. This edited volume is intended to help close this gap and provide the necessary backdrop for thinking strategically about biology in defense planning and policymaking. This volume is about applications of the biological sciences, here called biologically inspired innovations, to the military. Rather than treating biology as a series of threats to be dealt with, such innovations generally approach the biological sciences as a set of opportunities for the military to gain strategic advantage over adversaries. These opportunities range from looking at everything from genes to brains, from enhancing human performance to creating renewable energy, from sensing the environment around us to harnessing its power.

accounting and financial ratios expanding the vintage lily: An Introduction to Criminological Theory Roger Hopkins Burke, 2018-11-01 This book provides a comprehensive and up-to-date introduction to criminological theory for students taking courses in criminology at both undergraduate and postgraduate level. Building on previous editions, this book presents the latest research and theoretical developments. The text is divided into five parts, the first three of which address ideal type models of criminal behaviour: the rational actor, predestined actor and victimized actor models. Within these, the various criminological theories are located chronologically in the context of one of these different traditions, and the strengths and weaknesses of each theory and model are clearly identified. The fourth part of the book looks closely at more recent attempts to integrate theoretical elements from both within and across models of criminal behaviour, while the fifth part addresses a number of key recent concerns of criminology: postmodernism, cultural criminology, globalization and communitarianism, the penal society, southern criminology and critical criminology. All major theoretical perspectives are considered, including: classical criminology, biological and psychological positivism, labelling theories, feminist criminology, critical criminology and left realism, situation action, desistance theories, social control theories, the risk society, postmodern condition and terrorism. The new edition also features comprehensive coverage of recent developments in criminology, including ‘the myth of the crime drop’, the revitalization of critical criminology and political economy, shaming and crime, defiance theory, coerced mobility theory and new developments in social control and general strain theories. This revised and expanded fifth edition of An Introduction to Criminological Theory includes chapter summaries, critical thinking questions, policy implications, a full glossary of terms and theories and a timeline of criminological theory, making it essential reading for those studying criminology and taking courses on theoretical criminology, understanding crime, and crime and deviance

accounting and financial ratios expanding the vintage lily: Masculinities R. W. Connell, Raewyn Connell, 2005 This is an exciting new edition of R.W. Connell's ground-breaking text, which has become a classic work on the nature and construction of masculine identity. Connell argues that there is not one masculinity, but many different masculinities, each associated with different positions of power. In a world gender order that continues to privilege men over women, but also raises difficult issues for men and boys, his account is more pertinent than ever before. In a substantial new introduction and conclusion, Connell discusses the development of masculinity studies in the ten years since the book's initial publication. He explores global gender relations, new theories, and practical uses of mascunlinity research. Looking to the future, his new concluding chapter addresses the politics of masculinities, and the implications of masculinity research for understanding current world issues. Against the backdrop of an increasingly divided world, dominated by neo-conservative politics, Connell's account highlights a series of compelling questions about the future of human society. This second edition of Connell's classic book will be essential reading for students taking courses on masculinities and gender studies, and will be of interest to students and scholars across the humanities and social sciences.

accounting and financial ratios expanding the vintage lily: *Business Ratios Guidebook* Steven M. Bragg, 2017-10-30 Today's financial executive needs a way to assess the financial performance and financial position of business organizations. The Business Ratios Guidebook provides one of the best ways to do so by describing more than 200 ratios and other measurements. When applied to an organization's financial statements, these ratios can clarify its results, liquidity, and cash flows. The measurement areas covered include performance, return on investment, share performance and constraints. Examples of the functional areas also covered include cash management, credit and collections, customer service, human resources, production, and sales. In short, this book is the ultimate desk reference for ratio analysis.

accounting and financial ratios expanding the vintage lily: Obfuscation Finn Brunton, Helen Nissenbaum, 2015-09-04 How we can evade, protest, and sabotage today's pervasive digital surveillance by deploying more data, not less—and why we should. With Obfuscation, Finn Brunton and Helen Nissenbaum mean to start a revolution. They are calling us not to the barricades but to our computers, offering us ways to fight today's pervasive digital surveillance—the collection of our data by governments, corporations, advertisers, and hackers. To the toolkit of privacy protecting techniques and projects, they propose adding obfuscation: the deliberate use of ambiguous, confusing, or misleading information to interfere with surveillance and data collection projects. Brunton and Nissenbaum provide tools and a rationale for evasion, noncompliance, refusal, even sabotage—especially for average users, those of us not in a position to opt out or exert control over data about ourselves. Obfuscation will teach users to push back, software developers to keep their user data safe, and policy makers to gather data without misusing it. Brunton and Nissenbaum present a guide to the forms and formats that obfuscation has taken and explain how to craft its implementation to suit the goal and the adversary. They describe a series of historical and contemporary examples, including radar chaff deployed by World War II pilots, Twitter bots that hobbled the social media strategy of popular protest movements, and software that can camouflage users' search queries and stymie online advertising. They go on to consider obfuscation in more general terms, discussing why obfuscation is necessary, whether it is justified, how it works, and how it can be integrated with other privacy practices and technologies.

accounting and financial ratios expanding the vintage lily: What a City Is For Matt Hern, 2016-09-23 An investigation into gentrification and displacement, focusing on the case of Portland, Oregon's systematic dispersal of black residents from its Albina neighborhood. Portland, Oregon, is one of the most beautiful, livable cities in the United States. It has walkable neighborhoods, bike lanes, low-density housing, public transportation, and significant green space—not to mention craft-beer bars and locavore food trucks. But liberal Portland is also the whitest city in the country. This is not circumstance; the city has a long history of officially sanctioned racialized displacement that continues today. Over the last two and half decades, Albina—the one major Black neighborhood in Portland—has been systematically uprooted by market-driven gentrification and city-renewal policies. African Americans in Portland were first pushed into Albina and then contained there through exclusionary zoning, predatory lending, and racist real estate practices. Since the 1990s, they've been aggressively displaced—by rising housing costs, developers eager to get rid of low-income residents, and overt city policies of gentrification. Displacement and dispossessions are convulsing cities across the globe, becoming the dominant urban narratives of our time. In What a City Is For, Matt Hern uses the case of Albina, as well as similar instances in New Orleans and Vancouver, to investigate gentrification in the twenty-first century. In an engaging narrative, effortlessly mixing anecdote and theory, Hern questions the notions of development, private property, and ownership. Arguing that home ownership drives inequality, he wants us to disown ownership. How can we reimagine the city as a post-ownership, post-sovereign space? Drawing on solidarity economics, cooperative movements, community land trusts, indigenous conceptions of alternative sovereignty, the global commons movement, and much else, Hern suggests repudiating development in favor of an incrementalist, non-market-driven unfolding of the city.

accounting and financial ratios expanding the vintage lily: Living Downtown Paul E. Groth, Paul Erling Groth, Paul Groth, 1994-01-01 From the palace hotels of the elite to cheap lodging houses, residential hotels have been an element of American urban life for nearly two hundred years. Since 1870, however, they have been the target of an official war led by people whose concept of home does not include the hotel. Do these residences constitute an essential housing resource, or are they, as charged, a public nuisance? Living Downtown, the first comprehensive social and cultural history of life in American residential hotels, adds a much-needed historical perspective to this ongoing debate. Creatively combining evidence from biographies, buildings and urban neighborhoods, workplace records, and housing policies, Paul Groth provides a definitive analysis of life in four price-differentiated types of downtown residence. He demonstrates that these hotels have played a valuable socioeconomic role as home to both long-term residents and temporary laborers. Also, the convenience of hotels has made them the residence of choice for a surprising number of Americans, from hobo author Boxcar Bertha to Calvin Coolidge. Groth examines the social and cultural objections to hotel households and the increasing efforts to eliminate them, which have led to the seemingly irrational destruction of millions of such housing units since 1960. He argues convincingly that these efforts have been a leading contributor to urban homelessness. This highly original and timely work aims to expand the concept of the American home and to recast accepted notions about the relationships among urban life, architecture, and the public management of residential environments.

accounting and financial ratios expanding the vintage lily: Forests, Trees and Human Health Kjell Nilsson, Marcus Sangster, Christos Gallis, Terry Hartig, Sjerp de Vries, Klaus Seeland, Jasper Schipperijn, 2010-10-10 The link between modern lifestyles and increasing levels of chronic heart disease, obesity, stress and poor mental health is a concern across the world. The cost of dealing with these conditions places a large burden on national public health budgets so that policymakers are increasingly looking at prevention as a cost-effective alternative to medical treatment. Attention is turning towards interactions between the environment and lifestyles. Exploring the relationships between health, natural environments in general, and forests in particular, this groundbreaking book is the outcome of the European Union’s COST Action E39 ‘Forests, Trees and Human Health and Wellbeing’, and draws together work carried out over four years by scientists from 25 countries working in the fields of forestry, health, environment and social sciences. While the focus is primarily on health priorities defined within Europe, this volume explicitly draws also on research from North America.
