accounting classes in college: Governance and Auditing Peter Moizer, 2005 This authoritative new collection contains reprints of seminal articles on the subject of auditing and its relationship to the way in which outside stakeholders monitor the activities of corporate management. Whilst the primary audience is students in upper-level undergraduate and graduate accounting courses, the book should also be of use to existing researchers, as it collects together the 'must read' articles on the subject in a readily accessible form. The articles have been selected to cover four broad topic areas: (i) the role of auditing in the governance process, (ii) audit quality and auditor reputation, (iii) governance and audit committees and (iv) the relationship between internal and external auditors. The readings show that much work has been done and that there now exists a substantial body of knowledge of how auditing can contribute to corporate governance. The volume makes an important contribution to an issue that will continue to raise challenges in the years ahead. 25 articles, dating from 1971 to 2003

accounting classes in college: Career as an Accountant Institute for Career Research, 2014-06 Accounting is one of the most in-demand careers today, with more new jobs opening up every day. The opportunities available to accountants, auditors and similar professionals in the field are expected to continue expanding as international business increases and more government regulations take effect. Accounting is rated among the top five careers by such publications as Forbes and CNN/Money, with new graduates earning an average of \$55,000 in their first year on the job. Accountants work with businesses, governments and other organizations to analyze and manage their finances. Accountants use spreadsheets and other computer applications to record, communicate and interpret financial results. They track transactions, recommend cost-cutting measures, and ensure that taxes are paid promptly and correctly. Accountants also help individuals and families file their taxes and manage their personal finances. Opportunities for accountants can be found in cities of all sizes across the country. Some accountants are employed directly by businesses, government agencies, not-for-profits, colleges and similar organizations. Others work for

public accounting firms that are retained by organizations to provide financial services. Accountants may also be self-employed, such as those who specialize in providing tax services for families. A four-year degree from an accredited college or university is typically the minimum requirement to land your first job as an accountant. A graduate degree can be helpful, particularly for management positions or highly technical financial analysis work. Many accountants obtain professional licenses, most notable the Certified Public Accountant (CPA). State licensing requirements vary, but CPAs generally must obtain additional college credit hours, have experience working in the field, and pass a rigorous examination. Employment experts predict that the number of accounting and auditing jobs will grow by over 15 percent within the coming decade, as economic expansion drives the need for financial expertise. Accountants and auditors are paid on average \$65,000 a year, a significant increase from just \$60,000 only a few years ago, and earnings are expected to continue to track upward.

accounting classes in college: *The Enlightened Accountant* Gennaro Cuofano, 2016-01-15 In the modern world, things change so fast that after a blink of an eye the world seemed changed. Few things remained unchanged and one of these is accounting. Of course few frameworks have been created over the 20th century to tackle issues such as fraud and transparency. Indeed, although the basic method of accounting remained the same, many people do not approach the discipline and look at it almost with a skeptical eye. As if the understanding of it is reserved to few wise men, part of a small circle. These men use their own language to communicate. This language so strange and intriguing gives offspring to the financial organization of any business, small or big, individual or multinational. In this book we are going to burst this myth. After working for few years in the Accounting and Finance Field as Financial Analyst and Assistant Controller I understood that many times accountants do not want to be understood. My aim instead, is to make Financial Accounting accessible to anyone.

accounting classes in college: *The Interface of Accounting Education and Professional Training* Elaine Evans, Roger Juchau, Richard M.S. Wilson, 2014-07-16 Over many decades the global development of professional accounting education programmes has been undertaken by higher education institutions, professional accounting bodies, and employers. These institutions have sometimes co-operated and sometimes been in conflict over the education and/or training of future accounting professionals. These ongoing problems of linkage and closure between academic accounting education and professional training have new currency because of pressures from students and employers to move accounting preparation onto a more efficient, economic and practical basis. *The Interface of Accounting Education and Professional Training* explores current elements of the interface between the academic education and professional training of accountants in Australia, New Zealand, South Africa and the UK. It argues for a reassessment of the considerations and requirements for developing professional accounting programs which can make a student: capable of being an accountant (the academy); ready to be an accountant (the workplace); and professional in being an accountant (the professional bodies). This book was originally published as a special issue of *Accounting Education: An International Journal*.

accounting classes in college: In Retrospection Edgardo G. Calansingin, 2012-04-02 The Author began his story with his birth in 1931 in a small town of Murcia, Province of Negros Occidental and Negros Islands in an underdeveloped country of the Philippines in the Far East. Cresencio L. Calansingin, his father secured an employment as one of the swimming pool cleaners and Angelina G. Calansingin, his mother moved to the Mambucal Spring Summer Resort at the Provincial Government Forest Reservation area at the mountainside of Canlaon Mountain of Negros Islands. The couple transferred down to the Bago River Ferry Mambucal Bridge, two years later, when both secured employment as Toll Collectors of the Bridge. Bago River was an isolated location, six kilometers east to the Mambucal Spring Summer Resort and eight kilometers west to the town of Murcia. The Author at a very tender age had the river for a playground. He contracted ear infections because of daily diving into the water and swimming on the river. The infection spread and hardened his sinus cavities causing stammering of speech. Ignorance, neglect, and distances to the Provincial Hospital 34 kilometers west to Bacolod City, the capital of the Province aggravated his medical condition. The Authors father died when he was 6 years old and his mother remarried a year later. Then World War II broke out and the Authors paternal grandparents decided they took the orphaned boy under their custody in as much as the widowed mother married a widower who had two children by his previous marriage. The Author at age 10 years old, worked with his grandfather, aged 56 years old. They cleared a two-hectare piece of land of abandoned sugarcanes, plowed, and harrowed the soil using plows or harrows pulled by the carabaos while each walked after each work animal pulling the farm implement. The Author stumbled many times after the plow handle every time the plowshare hit the resisting sugarcane roots that embedded deeply and securely to the earth. There were hundreds of rows in a hectare and hundreds of roots in a row and he stumbled hundreds of times while his grandfather looked after his welfare and waited patiently for his recovery and they went on plowing the fields. Plowing and harrowing the fields were two aspects of rice farming, they sat, knelt, and pulled away every weed from every root of the plants that competed against the plants for nutrients from the soil. They were hard labor but they needed the rice from the plants for subsistence. The Author discovered that chewing sugarcanes the whole day or eating root crops such as camote (sweet potato), cassava, and corn did not supply the required nutrition. He needed the staple food of rice and fish for daily existence. Food, shelter, and clothing were his grandparents preoccupation during wartime. They planted rice, camote, cassava, corn, beans, and mongo according to the months (season). They raised fowls for supplemental food. His grandfather was a skilled carpenter and they built a hut made of cogon grasses and bamboo tree materials. His grandmother assembled pieces of clothes and sewed them for his pants and shirt because he refused wearing clothes improvised out of empty sugar sacks. A group of marauders swooped down late one night and carted all their foodstuff, clothes, and they started all over again. His grandmother saw to it that they ate rice once a day while root crops made up for breakfast and dinner. They went half-hungry every day for months until they produced again the much-needed staple food. Three long years of World War II was not a dream. It was waking up every morning, heading to the carabao enclosure, and taking the work animals to labor or to pastures whether under the heat of the dry season sun or under the downpour of the rainy days. Work animals need food too and his daily tasks included riding them to pastures. He grazed the carabaos to the tall abandoned sugarcanes for the animals loved chewing the offshoot sugarcane leaves, then he disembarked suddenly and went after the birds n
