📖 **Accounting major course list:** Contemporary Issues in Accounting Elaine Conway, Darren Byrne, 2018-06-01 The book explores the developing challenges and opportunities within the business and finance world which are likely to impact the accounting profession in the near future. It outlines a number of approaches to ensure that the accountants of the future are equipped with a useful awareness of some of the key topic areas that are quickly becoming a reality and helps bridge the gap between academia and practice. The chapters are standalone introductory pieces to provide useful précis of key topics and how they apply to the accounting profession in particular. It aims to deliver key readings on 'hot topics' not addressed in other texts which the accounting profession is tackling or are likely to tackle soon. Hence the book provides accounting students and researchers a solid grounding in a broad range of highly relevant non-technical accounting themes, looking at the bigger environment in which future accountants will be operating, involving considerations of

strategic corporate governance issues and highlighting competences beyond the standard technical accounting skill sets.

accounting major course list: The Corporation Joel Bakan, 2019-09-03 The inspiration for the film that won the 2004 Sundance Film Festival Audience Award for Best Documentary, *The Corporation* contends that the corporation is created by law to function much like a psychopathic personality, whose destructive behavior, if unchecked, leads to scandal and ruin. Over the last 150 years the corporation has risen from relative obscurity to become the world's dominant economic institution. Eminent Canadian law professor and legal theorist Joel Bakan contends that today's corporation is a pathological institution, a dangerous possessor of the great power it wields over people and societies. In this revolutionary assessment of the history, character, and globalization of the modern business corporation, Bakan backs his premise with the following observations: -The corporation's legally defined mandate is to pursue relentlessly and without exception its own economic self-interest, regardless of the harmful consequences it might cause to others. -The corporation's unbridled self-interest victimizes individuals, society, and, when it goes awry, even shareholders and can cause corporations to self-destruct, as recent Wall Street scandals reveal. -Governments have freed the corporation, despite its flawed character, from legal constraints through deregulation and granted it ever greater authority over society through privatization. But Bakan believes change is possible and he outlines a far-reaching program of achievable reforms through legal regulation and democratic control. Featuring in-depth interviews with such wide-ranging figures as Nobel Prize winner Milton Friedman, business guru Peter Drucker, and cultural critic Noam Chomsky, *The Corporation* is an extraordinary work that will educate and enlighten students, CEOs, whistle-blowers, power brokers, pawns, pundits, and politicians alike.

accounting major course list: Career as an Accountant Institute for Career Research, 2014-06 Accounting is one of the most in-demand careers today, with more new jobs opening up every day. The opportunities available to accountants, auditors and similar professionals in the field are expected to continue expanding as international business increases and more government regulations take effect. Accounting is rated among the top five careers by such publications as Forbes and CNN/Money, with new graduates earning an average of \$55,000 in their first year on the job. Accountants work with businesses, governments and other organizations to analyze and manage their finances. Accountants use spreadsheets and other computer applications to record, communicate and interpret financial results. They track transactions, recommend cost-cutting measures, and ensure that taxes are paid promptly and correctly. Accountants also help individuals and families file their taxes and manage their personal finances. Opportunities for accountants can be found in cities of all sizes across the country. Some accountants are employed directly by businesses, government agencies, not-for-profits, colleges and similar organizations. Others work for public accounting firms that are retained by organizations to provide financial services. Accountants may also be self-employed, such as those who specialize in providing tax services for families. A four-year degree from an accredited college or university is typically the minimum requirement to land your first job as an accountant. A graduate degree can be helpful, particularly for management positions or highly technical financial analysis work. Many accountants obtain professional licenses, most notable the Certified Public Accountant (CPA). State licensing requirements vary, but CPAs generally must obtain additional college credit hours, have experience working in the field, and pass a rigorous examination. Employment experts predict that the number of accounting and auditing jobs will grow by over 15 percent within the coming decade, as economic expansion drives the need for financial expertise. Accountants and auditors are paid on average \$65,000 a year, a significant increase from just \$60,000 only a few years ago, and earnings are expected to continue to track upward.

accounting major course list: *The Transfer of Learning* Sarah Leberman, Lex McDonald, 2016-02-17 The book addresses a crucial issue for all involved in education and training: the transfer of learning to new and different contexts. Educators, employers and learners face the problem of ensuring that what is learnt in the classroom is able to be adapted and used in the workplace. It focuses on adult learners in professional and vocational contexts. The authors provide an accessible book on the transfer of learning which draws on multi-disciplinary perspectives from education, psychology and management. The Transfer of Learning will be useful both for postgraduate students and for practitioners wanting to deepen their understanding of transfer and for those interested in practical applications. It combines theory and practice from international research and the authors' own case studies of transfer involving learners engaged in professional development and study towards qualifications. Theories of adult learning, change and lifelong learning are discussed in relation to the transfer of learning. The purpose of this book is to emphasise to tertiary educators and trainers the importance of transfer and in doing so highlight the participants' voices as central foci in coming to an understanding of the process. By doing this it balances the literature which has to date emphasized transfer from a trainer's and/or organization's perspective. There has been little if any substantive material on tertiary transfer issues and yet demands are increasing for tertiary education providers to be more accountable and more focused on developing students' ability to use their learning in everyday work situations. The book is unique in that it adopts a phenomenological perspective and underscores the significance of the participants' voices in understanding issues.

accounting major course list: Liberalising the Accounting Curriculum in University Education Alan Sangster, Richard M.S. Wilson, 2014-10-29 This book presents the views of accounting educators, accounting education policy-makers, and accounting practitioners from across the world on the challenging topic of liberalising the accounting curriculum within university education. Accounting is a relatively new subject within universities and has been absorbed into a high level of education without any real attempt to do so within the traditional ethos of a liberal arts education. In this book, the logic of teaching using the liberal arts is described and contrasted with the practical vocational training approach of teaching which has formed the foundation of accountancy courses for many years. A proposal to change this established practice, by integrating the liberal arts into the university accounting curriculum, is followed by a series of short chapters which address the relevance, validity and worthiness of the proposed approach. Comments and counter-arguments are then discussed before further chapters illustrate how the proposed change may be achieved in a variety of different contexts – ranging from that of the global financial crisis (which began in 2008) to the inclusion of ethics and sustainability within the accounting curriculum. This book will aid those teaching accounting in universities to improve the design of their accounting degree programmes by moving away from an excessive emphasis on technical skills towards a broader consideration of a liberal contextualisation of the accounting curriculum. This book was

originally published as a special issue of Accounting Education: an international journal.

accounting major course list: The College Buzz Book Carolyn C. Wise, Stephanie Hauser, 2007-03-26 Many guides claim to offer an insider view of top undergraduate programs, but no publisher understands insider information like Vault, and none of these guides provides the rich detail that Vault's new guide does. Vault publishes the entire surveys of current students and alumni at more than 300 top undergraduate institutions. Each 2- to 3-page entry is composed almost entirely of insider comments from students and alumni. Through these narratives Vault provides applicants with detailed, balanced perspectives.

accounting major course list: Educating for Business, Public Service and the Social Sciences Peter Groenewegen, 2009 Tertiary economics and business education started early in Australia but was not organised on a faculty basis until the 20th century. Commerce and business teaching at Sydney University began in 1906, and from 1920 was taught in the Faculty of Economics, together with public administration and accounting. Its progress for the next 80 years is chronicled in this comprehensive history of the Faculty of Economics. The book presents a broad overview of staff, students and courses of study during Depression, war, postwar reconstruction, student unrest and successful moves to add further Business studies. A prelude surveys the 19th-century beginnings and the epilogue presents the varied education opportunities offered for the 21st century by the Faculty of Economics and Business.

accounting major course list: Personal Transferable Skills in Accounting Education Kim Watty, Beverley Jackling, Richard M.S. Wilson, 2014-07-16 The development of generic skills (often referred to as 'soft skills') in accounting education has been a focus of discussion and debate for several decades. During this time employers and professional bodies have urged accounting educators to consider and develop curricula which provide for the development and assessment of these skills. In addition, there has been criticism of the quality of accounting graduates and their ability to operate effectively in a global economy. Embedding generic skills in the accounting curriculum has been acknowledged as an appropriate means of addressing the need to provide 'knowledge professionals' to meet the needs of a global business environment. Personal Transferable Skills in Accounting Education illustrates how generic skills are being embedded and evaluated in the accounting curriculum by academics from a range of perspectives. Each chapter provides an account of how the challenge of incorporating generic skills in the accounting curriculum within particular educational environments has been addressed. The challenges involved in generic skills development in higher education have not been limited to the accounting discipline. This book provides examples which potentially inform a wide range of discipline areas. Academics will benefit from reading the experiences of incorporating generic skills in the accounting curriculum from across the globe. This book was originally published as a themed issue of Accounting Education: an international journal.
