gene pool, Hiya endeavored to live beyond her physical limitations and intellectually excel beyond those around her. She lived a life of constant discovery, research, learning, and teaching, which was complicated frequently by doctors, hospitals, treatments, insurance companies, and the law. After serving as the go to research driven caregiver for family and friends for most of her adult life, Hiya found herself in critical need of medical attention. Living on the brink of poverty and without family support, she did what she always done for others and became her own advocate. Written as an inspired biography, the story of Hiya and the epilogue were written as a legacy to an amazing woman who epitomized patient advocacy and why it has become a critical determining factor in the quality of healthcare that an individual may receive. What readers have said The book was very well written and I found the Epilogue to be particularly compelling and strong. The story itself kept me interested and motivated to keep reading. I have known patients like Hiya in my years in healthcare and I could well see how you became very attached to her. Anonymous professional caregiver Hiya's story is illustrative of the key messages involving patient advocacy and the healthcare system. For others, perhaps they'd like to read the Epilogue first, they then would read Hiya's amazing story of tenacity. From 2005 to 2015, undergraduate enrollment from China rose from under 10,000 to over 135,000. This privileged yet diverse group of young people from a changing China must navigate the complications and confusions of their formative years while bridging the two most powerful countries in the world. How do these students come to study in the United States? What does this experience mean to them? What does American higher education need to know and do in order to continue attracting these students and to provide sufficient support for them? In *Ambitious and Anxious*, the sociologist Yingyi Ma offers a multifaceted analysis of this new wave of Chinese students based on research in both Chinese high schools and American higher-education institutions. Ma argues that these students' experiences embody the duality of ambition and anxiety that arises from transformative social changes in China. These students and their families have the ambition to navigate two very different educational systems and societies. Yet the intricacy and pressure of these systems generate a great deal of anxiety, from applying to colleges before arriving, to studying and socializing on campus, and to looking ahead upon graduation. *Ambitious and Anxious* also considers policy implications for American colleges and universities, including recruitment, student experiences, faculty support, and career services.

accounting minor requirements ucla: *Communities in Action* National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Population Health and Public Health Practice, Committee on Community-Based Solutions to Promote Health Equity in the United States, 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

accounting minor requirements ucla: *The Qualified Self* Lee Humphreys, 2018-04-13 How sharing the mundane details of daily life did not start with Facebook, Twitter, and YouTube but with pocket diaries, photo albums, and baby books. Social critiques argue that social media have made us narcissistic, that Facebook, Twitter, Instagram, and YouTube are all vehicles for me-promotion. In *The Qualified Self*, Lee Humphreys offers a different view. She shows that sharing the mundane details of our lives—what we ate for lunch, where we went on vacation, who dropped in for a visit—didn't begin with mobile devices and social media. People have used media to catalog and share their lives for several centuries. Pocket diaries, photo albums, and baby books are the predigital precursors of today's digital and mobile platforms for posting text and images. The ability to take selfies has not turned us into needy narcissists; it's part of a longer story about how people account for everyday life. Humphreys refers to diaries in which eighteenth-century daily life is documented with the brevity and precision of a tweet, and cites a nineteenth-century travel diary in which a young woman complains that her breakfast didn't agree with her. Diaries, Humphreys explains, were often written to be shared with family and friends. Pocket diaries were as mobile as smartphones, allowing the diarist to record life in real time. Humphreys calls this chronicling, in both digital and nondigital forms, media accounting. The sense of self that emerges from media accounting is not the purely statistics-driven “quantified self,” but the more well-rounded qualified self. We come to understand ourselves in a new way through the representations of ourselves that we create to be consumed.

while doing well.”—Mark Bittman, author of *Animal, Vegetable, Junk* What's in a label? For Dr. Bronner's, more than ingredients or intentions—it spells out an ethical commitment to fairness and sustainable growth, uniting consumers and companies worldwide. Dr. Bronner's Magic Soaps are renowned for their dense product labels (“All-One!”) and the curious tingling of peppermint. But how did this unusual natural soap transform the small print into soaring sales—inspiring customer loyalty not just with lather, but with good clean business? In *Honor Thy Label*, Dr. Bronner's head of Special Operations, Gero Leson, reveals the inside story of how a little-known family-run soap company grew from countercultural roots to create a revolutionary fair trade and organic supply chain from the ground up—and rode the waves of popular demand without losing sight of the process. Through stories of harrowing setbacks and hard-won triumphs in projects that spanned the globe, in Sri Lanka, Ghana, India, and beyond, Leson demystifies the process of building and scaling ethical production. And he proves that if done right, the results ripple outward to benefit customers, communities, and the environment we share. Told with spirit and conviction, *Honor Thy Label* invites socially conscious entrepreneurs and shoppers on a journey to break the boundaries of production with the pioneers of socially just business—spreading Dr. Bronner's radical vision of simple ingredients with cosmic impact.

accounting minor requirements ucla: **Scorecasting** Tobias Moskowitz, L. Jon Wertheim, 2011-01-25 In Scorecasting, University of Chicago behavioral economist Tobias Moskowitz teams up with veteran Sports Illustrated writer L. Jon Wertheim to overturn some of the most cherished truisms of sports, and reveal the hidden forces that shape how basketball, baseball, football, and

hockey games are played, won and lost. Drawing from Moskowitz's original research, as well as studies from fellow economists such as bestselling author Richard Thaler, the authors look at: the influence home-field advantage has on the outcomes of games in all sports and why it exists; the surprising truth about the universally accepted axiom that defense wins championships; the subtle biases that umpires exhibit in calling balls and strikes in key situations; the unintended consequences of referees' tendencies in every sport to swallow the whistle, and more. Among the insights that Scorecasting reveals: • Why Tiger Woods is prone to the same mistake in high-pressure putting situations that you and I are • Why professional teams routinely overvalue draft picks • The myth of momentum or the hot hand in sports, and why so many fans, coaches, and broadcasters fervently subscribe to it • Why NFL coaches rarely go for a first down on fourth-down situations--even when their reluctance to do so reduces their chances of winning. In an engaging narrative that takes us from the putting greens of Augusta to the grid iron of a small parochial high school in Arkansas, Scorecasting will forever change how you view the game, whatever your favorite sport might be.
