accounting websites for students: The Enlightened Accountant Gennaro Cuofano, 2016-01-15 In the modern world, things change so fast that after a blink of an eye the world seemed changed. Few things remained unchanged and one of these is accounting. Of course few frameworks have been created over the 20th century to tackle issues such as fraud and transparency. Indeed, although the basic method of accounting remained the same, many people do not approach the discipline and look at it almost with a skeptical eye. As if the understanding of it is reserved to few wise men, part of a small circle. These men use their own language to communicate. This language

so strange and intriguing gives offspring to the financial organization of any business, small or big, individual or multinational. In this book we are going to burst this myth. After working for few years in the Accounting and Finance Field as Financial Analyst and Assistant Controller I understood that many times accountants do not want to be understood. My aim instead, is to make Financial Accounting accessible to anyone.

accounting websites for students: Communication in Accounting Education Richard M.S. Wilson, F. Elizabeth Gray, Lynn Hamilton, 2016-04-14 Accounting, often described as the language of business, requires a diverse set of written, listening and oral communication skills if those who practise it are to be effective. Given the pace of change relating to, for example, the evolution of international accounting standards and the demands for greater transparency, accountants must be clear, responsive, and audience-focussed communicators. Employers of accountants consistently comment on the need for their new graduate recruits and trainees to have strong written, oral, and interpersonal communication skills. In this light accounting educators face the challenge of designing and delivering programmes that reflect professional expectations on the part of employers and clients, and educating students on how to make informed communication choices in order to achieve desired results and to build good working relationships. The chapters in this book deal with such topics as accounting students' perceptions of oral communication skills; competence-based writing skills; and the development of listening skills. This book was originally published as Accounting Education: an international journal.

The book is divided into two parts. The first part focuses on developing thinking about the different kinds of ethical questions that could be posed in relation to accounting. The second part focuses more explicitly on accounting practice, exploring the ethical function of accounting in relation to the market economy, ethics in relation to the accounting profession, and the ethics of the international accounting harmonization project.
