ace masters of education: The State Must Provide Adam Harris, 2021-08-10 “A book that both taught me so much and also kept me on the edge of my seat. It is an invaluable text from a supremely talented writer.” —Clint Smith, author of *How the Word is Passed* The definitive history of the pervasiveness of racial inequality in American higher education America’s colleges and universities have a shameful secret: they have never given Black people a fair chance to succeed. From its inception, our higher education system was not built on equality or accessibility, but on educating—and prioritizing—white students. Black students have always been an afterthought. While governments and private donors funnel money into majority white schools, historically Black colleges and universities (HBCUs), and other institutions that have high enrollments of Black students, are struggling to survive, with state legislatures siphoning away federal funds that are legally owed to these schools. In *The State Must Provide*, Adam Harris reckons with the history of a higher education system that has systematically excluded Black people from its benefits. Harris weaves through the legal, social, and political obstacles erected to block equitable education in the United States, studying the Black Americans who fought their way to an education, pivotal Supreme Court cases like *Plessy v. Ferguson* and *Brown v. Board of Education*, and the government’s role in creating and upholding a segregated education system. He explores the role that Civil War-era legislation intended to bring agricultural education to the masses had in creating the HBCUs that have played such a major part in educating Black students when other state and private institutions refused to accept them. *The State Must Provide* is the definitive chronicle of higher education’s failed attempts at equality and the long road still in front of us to remedy centuries of racial discrimination—and poses a daring solution to help solve the underfunding of HBCUs. Told through a vivid cast of characters, *The State Must Provide* examines what happened before and after schools were supposedly integrated in the twentieth century, and why higher education remains broken to this day.

ace masters of education: *The University Next Door* Mark Schneider, KC Deane, 2014-11-01 The challenges public comprehensive universities face today are expanding, they have been challenged to enroll and graduate more students, adopt new technologies that lower cost without sacrificing quality, and align program and curricular offerings with the skills that employers require. While these universities have a long history of adapting to change, today's environment will likely test the capabilities of even the most adaptive institutions. This volume assembles a team of experts from a variety of disciplines to examine both the history of the comprehensive university and what lies ahead. Overall, the book grapples with such questions as: How do these institutions adapt to serve the growing population of non-traditional students? How well do they prepare graduates for the labour market? Can partnerships between community colleges and comprehensive universities bolster student success? The University Next Door draws a much-needed attention to a set of institutions that has historically received little notice, yet play an important role in meeting our new attainment goals and helping the economy grow. This book: examines the role of comprehensive universities from start to finish, their history and future; uses empirical analysis to explore complex questions about which students choose these universities and why; explores how these institutions might struggle under a federal ratings system such as the one proposed by President Obama;

discusses how these institutions can better monitor the needs of the economy and better educate students to fill those needs; and provides recommendations to inform future decisions about higher education policy.

ace masters of education: Mathematical Mindsets Jo Boaler, 2015-10-12 Banish math anxiety and give students of all ages a clear roadmap to success *Mathematical Mindsets* provides practical strategies and activities to help teachers and parents show all children, even those who are convinced that they are bad at math, that they can enjoy and succeed in math. Jo Boaler—Stanford researcher, professor of math education, and expert on math learning—has studied why students don't like math and often fail in math classes. She's followed thousands of students through middle and high schools to study how they learn and to find the most effective ways to unleash the math potential in all students. There is a clear gap between what research has shown to work in teaching math and what happens in schools and at home. This book bridges that gap by turning research findings into practical activities and advice. Boaler translates Carol Dweck's concept of 'mindset'

into math teaching and parenting strategies, showing how students can go from self-doubt to strong self-confidence, which is so important to math learning. Boaler reveals the steps that must be taken by schools and parents to improve math education for all. Mathematical Mindsets: Explains how the brain processes mathematics learning Reveals how to turn mistakes and struggles into valuable learning experiences Provides examples of rich mathematical activities to replace rote learning Explains ways to give students a positive math mindset Gives examples of how assessment and grading policies need to change to support real understanding Scores of students hate and fear math, so they end up leaving school without an understanding of basic mathematical concepts. Their evasion and departure hinders math-related pathways and STEM career opportunities. Research has shown very clear methods to change this phenomena, but the information has been confined to research journals—until now. Mathematical Mindsets provides a proven, practical roadmap to mathematics success for any student at any age.

ace masters of education: Race of Aces John R Bruning, 2020-01-14 The astonishing untold story of the WWII airmen who risked it all in the deadly race to become the greatest American fighter pilot. In 1942, America's deadliest fighter pilot, or ace of aces -- the legendary Eddie Rickenbacker -- offered a bottle of bourbon to the first U.S. fighter pilot to break his record of twenty-six enemy planes shot down. Seizing on the challenge to motivate his men, General George Kenney promoted what they would come to call the race of aces as a way of boosting the spirits of his war-weary command. What developed was a wild three-year sprint for fame and glory, and the chance to be called America's greatest fighter pilot. The story has never been told until now. Based on new research and full of revelations, John Bruning's brilliant, original book tells the story of how five American pilots contended for personal glory in the Pacific while leading Kenney's resurgent air force against the most formidable enemy America ever faced. The pilots -- Richard Bong, Tommy McGuire, Neel Kearby, Charles MacDonald and Gerald Johnson -- riveted the nation as they contended for Rickenbacker's crown. As their scores mounted, they transformed themselves from farm boys and aspiring dentists into artists of the modern dogfight. But as the race reached its climax, some of the pilots began to see how the spotlight warped their sense of duty. They emerged as leaders, beloved by their men as they chose selfless devotion over national accolades. Teeming with action all across the vast Pacific theater, Race of Aces is a fascinating exploration of the boundary between honorable duty, personal glory, and the complex landscape of the human heart. ace masters of education: Mind the Gap Alliance for Clinical Education, 2017-09-28 For the first time in history there are four or five generations interacting regularly in society and in the workplace. Sociology and popular culture call them Traditionalists, Baby Boomers, Generation X, Millennials, and Generation Z. While intergenerational differences have always been present, the likelihood that someone may be interacting with, working with, or supervising individuals three generations distant is becoming more commonplace. Our goal is to raise awareness of the impact of generational issues on medical education and to help medical educators, trainees, supervisors, and employers understand how the different generations learn, work, interact with patients, and lead.

ace masters of education: Engineering Education Quality Assurance Arun Patil, Peter Gray, 2009-09-16 With the rapid globalization of higher education as well as related changes in social, political, economic, and other conditions over the last 25 years there have been ever increasing expectations for higher education, in general, and Engineering Education, in particular. These expectations are often expressed in terms of the need for Quality Assurance locally, regionally, and globally. In some cases, there is a long tradition of independence and self-regulation of higher education institutions and programs. In other contexts, there has been considerable governmental regulation and disciplinary direction over time. The authors in this volume represent essentially all continents and 15 different countries. The common issues that they raise and their accounts of past, present, and future challenges provide a snapshot of the current state of Quality Assurance in higher education and Engineering Education. This volume begins with an overview of the history and background of Quality Assurance in higher education and Engineering Education over the last century. The discussion of the historical, philosophical, political, and social background of Quality Assurance sets the stage for the other chapters. Following this broad brush stroke introduction, in the next part of the book, authors describe the general issues and challenges facing Quality Assurance in the twenty-first century from both regional and national perspectives. These authors have extensive experience in the area of Quality Assurance and have observed its growth and develop first hand over many years.

ace masters of education: Failure of Corporate School Reform Kenneth J. Saltman, 2015-11-17 Corporate school reforms, especially privatization, union busting, and high-stakes testing have been hailed as the last best hope for public education. Yet, as Kenneth Saltman powerfully argues in this new book, corporate school reforms have decisively failed to deliver on what their proponents have promised for two decades: higher test scores and lower costs. As Saltman illustrates, the failures of

corporate school reform are far greater and more destructive than they seem. Left unchecked, corporate school reform fails to challenge and in fact worsens the most pressing problems facing public schooling, including radical funding inequalities, racial segregation, and anti-intellectualism. But it is not too late for change. Against both corporate school reformers and its liberal critics, this book argues for the expansion of democratic pedagogies and a new common school movement that will lead to broader social renewal.
