adams place cna training: Patient Safety and Quality Ronda Hughes, 2008 Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- *Patient Safety and Quality: An*

adams place cna training: Improving Diagnosis in Health Care National Academies of Sciences, Engineering, and Medicine, Institute of Medicine, Board on Health Care Services, Committee on Diagnostic Error in Health Care, 2015-12-29 Getting the right diagnosis is a key aspect of health care - it provides an explanation of a patient's health problem and informs subsequent health care decisions. The diagnostic process is a complex, collaborative activity that involves clinical reasoning and information gathering to determine a patient's health problem. According to *Improving Diagnosis in Health Care*, diagnostic errors-inaccurate or delayed diagnoses-persist throughout all settings of care and continue to harm an unacceptable number of patients. It is likely that most people will experience at least one diagnostic error in their lifetime, sometimes with devastating consequences. Diagnostic errors may cause harm to patients by preventing or delaying appropriate treatment, providing unnecessary or harmful treatment, or resulting in psychological or financial repercussions. The committee concluded that improving the diagnostic process is not only possible, but also represents a moral, professional, and public health imperative. *Improving Diagnosis in Health Care*, a continuation of the landmark Institute of Medicine reports *To Err Is Human* (2000) and *Crossing the Quality Chasm* (2001), finds that diagnosis-and, in particular, the occurrence of diagnostic errors-has been largely unappreciated in efforts to improve the quality and safety of health care. Without a dedicated focus on improving diagnosis, diagnostic errors will likely worsen as the delivery of health care and the diagnostic process continue to increase in complexity. Just as the diagnostic process is a collaborative activity, improving diagnosis will require collaboration and a widespread commitment to change among health care professionals, health care organizations, patients and their families, researchers, and policy makers. The recommendations of *Improving Diagnosis in Health Care* contribute to the growing momentum for change in this crucial area of health care quality and safety.

adams place cna training: Medications for Opioid Use Disorder Save Lives National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Committee on Medication-Assisted Treatment for Opioid Use Disorder, 2019-06-16 The opioid crisis in the United States has come about because of excessive use of these drugs for both legal and illicit purposes and unprecedented levels of consequent opioid use disorder (OUD). More than 2 million people in the United States are estimated to have OUD, which is caused by prolonged use of prescription opioids, heroin, or other illicit opioids. OUD is a life-threatening condition associated with a 20-fold greater risk of early death due to overdose, infectious diseases, trauma, and suicide. Mortality related to OUD continues to escalate as this public health crisis gathers momentum across the country, with opioid overdoses killing more than 47,000 people in 2017 in the United States. Efforts to date have made no real headway in stemming this crisis, in large part because tools that already exist-like evidence-based medications-are not being deployed to maximum impact. To support the dissemination of accurate patient-focused information about treatments for addiction, and to help provide scientific solutions to the current opioid crisis, this report studies the evidence base on medication assisted treatment (MAT) for OUD. It examines available evidence on the range of parameters and circumstances in which MAT can be effectively delivered and identifies additional research needed.

adams place cna training: Nurse Executive Linda Thompson Adams, RN, DrPH, FAAN, Edward H. O'Neil, PhD, MPA, 2008-03-10 This book takes insights drawn from the Executive Nurse Fellows program established by the Robert Wood Johnson Foundation to promote the idea of leadership development as an empowering force among nurses at ALL levels. It is intended as both a guide for professionals; leaders in schools of nursing, hospitals and other health care delivery systems, ambulatory care, long-term care, public and occupational health, and public policy, and as a text in leadership courses for students at master's level and beyond. It presents the core competencies developed by the RWJ Nurse Fellows program--i.e. interpersonal and communication effectiveness, risk-taking and creativity, self-knowledge, inspiring and leading change, and strategic vision--as the keys to nursing leadership. The book is organized around the program's leadership compass, a method used in leadership skill development. The four points of that compass are: Purpose: the vision to lead People: the passion to work with others Process: the skills to manage change Personal: the self-knowledge to thrive For each of these four points, the contributors (all graduates of the RWJ program) explore related competencies in each of three sections of the book: issues in public health, education, and service. The chapters reflect real-world experiences and are built around case studies that highlight one or two of the competencies.

adams place cna training: Social Isolation and Loneliness in Older Adults National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Health and Medicine Division, Board on Behavioral, Cognitive, and Sensory Sciences, Board on Health Sciences Policy, Committee on the Health and Medical Dimensions of Social Isolation and Loneliness in Older Adults, 2020-06-14 Social isolation and loneliness are serious yet underappreciated public health risks that affect a significant portion of the older adult population. Approximately one-quarter of community-dwelling Americans aged 65 and older are considered to be socially isolated, and a significant proportion of adults in the United States report feeling lonely. People who are 50 years of age or older are more likely to experience many of the risk factors that can cause or exacerbate social isolation or loneliness, such as living alone, the loss of family or friends, chronic illness, and sensory impairments. Over a life course, social isolation and loneliness may be episodic or chronic, depending upon an individual's circumstances and perceptions. A

substantial body of evidence demonstrates that social isolation presents a major risk for premature mortality, comparable to other risk factors such as high blood pressure, smoking, or obesity. As older adults are particularly high-volume and high-frequency users of the health care system, there is an opportunity for health care professionals to identify, prevent, and mitigate the adverse health impacts of social isolation and loneliness in older adults. *Social Isolation and Loneliness in Older Adults* summarizes the evidence base and explores how social isolation and loneliness affect health and quality of life in adults aged 50 and older, particularly among low income, underserved, and vulnerable populations. This report makes recommendations specifically for clinical settings of health care to identify those who suffer the resultant negative health impacts of social isolation and loneliness and target interventions to improve their social conditions. *Social Isolation and Loneliness in Older Adults* considers clinical tools and methodologies, better education and training for the health care workforce, and dissemination and implementation that will be important for translating research into practice, especially as the evidence base for effective interventions continues to flourish.

adams place cna training: Health and Healthcare in Northern Canada Rebecca Schiff, Helle Møller, 2021-11-02 Accounting for almost two thirds of the country's land-mass, Northern Canada is a vast region, host to rich natural resources and a diverse cultural heritage shared across Indigenous and non-indigenous residents. In this book, Rebecca Schiff and Helle Møller analyse health and healthcare in Northern Canada from a perspective that acknowledges the unique strengths, resilience, and innovation of northerners, while also addressing the challenges aggravated by contemporary manifestations of colonialism. Old and new forms of colonial programs and policies continue to create health and healthcare disparities in the North, which has had a profound impact on northerners. Divided into three sections, Health and Healthcare in Northern Canada paints a broad picture of primary issues that northern peoples face. Several chapters are written by northerners and utilize case studies, quotes, photographs, and other materials to highlight voices and perspectives of people living in northern Canada. In order to maintain resilience, improve the positive outcomes of health determinants, and diminish negative stereotypes, we must ensure that northerners - and their cultures, values, strengths and leadership - are at the centre of the ongoing work to achieve social justice and health equity.

adams place cna training: *Routledge Handbook of Naval Strategy and Security* Joachim Krause, Sebastian Bruns, 2016-03-17 This new handbook provides a comprehensive overview of the issues facing naval strategy and security in the twenty-first century. Featuring contributions from some of the world's premier researchers and practitioners in the field of naval strategy and security, this handbook covers naval security issues in diverse regions of the world, from the Indian Ocean and the Mediterranean to the Arctic and the piracy-prone waters off East Africa's coast. It outlines major policy challenges arising from competing claims, transnational organized crime and maritime terrorism, and details national and alliance reactions to these problems. While this volume provides detailed analyses on operational, judicial, and legislative consequences that contemporary maritime security threats pose, it also places a specific emphasis on naval strategy. With a public very much focused on the softer constabulary roles naval forces play (such as humanitarian assistance, disaster relief, naval diplomacy, maintenance of good order at sea), the overarching hard-power role of navies has been pushed into the background. In fact, navies and seapower have been notably absent from many recent academic discussions and deliberations of maritime security. This handbook provides a much-desired addition to the literature for researchers and analysts in the social sciences on the relationship between security policy and military means on, under, and from the sea. It comprehensively explains the state of naval security in this maritime century and the role of naval forces in it. This book will be of much interest to students of naval security and naval strategy, security studies and IR, as well as practitioners in the field.

adams place cna training: Comparative Information Technology Joseph Zajda, Donna Gibbs, 2009-04-21 Comparative Information Technology: Languages, Societies and the Internet, which is the fourth volume in the 12-volume series Globalisation, Comparative Education and Policy Research, offers a critique of the nexus between ICT and its impact on society, individuals and educational institutions. One of the most significant dimensions of globalisation has been the rapid development of information and communications technologies (ICTs). Our lives have been changed by this in numerous ways and the implications for education are enormous. The ICTs have transformed the linguistic, cognitive and visual dimensions of human communication, as well as our perceptions of the self, and social identity in the global culture. The ICTs have facilitated the development of new dimensions of digital literacy, such as blogging and sms messaging. In this sense, cyberlanguage continues to evolve by borrowing and adapting familiar words, coining new expressions, and embracing particular styles (Gibbs & Krause, 2006, 2007). However, information technology can be both empowering and disempowering. Individuals use the Internet, notebooks, and their BlackBerries and communicate via email. If clothing is an extension of one's skin, then the ICT has become an extension of our bodies. In a globalised world, linked through the Internet, a transformed identity can lead to a multiplicity of identities, some contradictory to each other, and some taking place primarily in the virtual communities of cyberspace.
