1. Introduction: Streamlining Device Management with Apple Business Manager

Adding a device in Apple Business Manager (ABM) is the cornerstone of efficient and secure enterprise mobile device management (MDM). ABM simplifies the process of deploying and managing Apple devices within an organization, offering centralized control and robust security features. Before diving into the specifics of add device in Apple Business Manager, let's understand why this process is crucial.

I remember a time, early in my career, when we managed devices manually. It was a chaotic nightmare! Each new employee's device required individual configuration, app installations, and security updates – a hugely time-consuming process prone to errors. Since implementing ABM, we've streamlined everything. The ability to add device in Apple Business Manager effortlessly

has saved countless hours and minimized security risks.

2. Prerequisites for Adding a Device in Apple Business Manager

Before you can add device in Apple Business Manager, you need a few essential elements:

An Apple Business Manager account: This is the central hub for managing all your Apple devices.

A valid Apple ID: This will be used for administrative access to ABM.

The device's serial number or IMEI: You'll need this to identify the specific device you're adding.

An MDM solution: A Mobile Device Management system (like Jamf Pro, Microsoft Intune, or other compatible solutions) is essential for configuring and managing enrolled devices.

3. Step-by-Step Guide: Add Device in Apple Business Manager

The process of add device in Apple Business Manager can be broadly categorized into two methods: Device Enrollment Program (DEP) and Volume Purchase Program (VPP).

3.1 DEP Enrollment (Recommended):

DEP is the most efficient way to add device in Apple Business Manager. When you purchase devices directly from Apple or authorized resellers participating in DEP, they are automatically assigned to your ABM account.

1. Log in to ABM: Access your Apple Business Manager account using your Apple ID.
2. Navigate to Devices: Find the section dedicated to managing your devices.
3. Enroll devices: If the devices are already associated with your ABM account, you'll see them listed. You can then select them to enroll them in your MDM solution. The process typically involves assigning the devices to an MDM server and configuring the enrollment profile.

4. Supervised vs. Unsupervised: Decide whether to enroll the devices as supervised (recommended for greater control) or unsupervised.
5. MDM Server Configuration: Configure your MDM server to receive and manage the enrolled devices.

Case Study: A large financial institution used DEP enrollment to add over 500 iPads to their ABM account. This streamlined onboarding process for new employees, ensuring consistent configurations and security protocols across all devices. They significantly reduced IT support requests related to device setup.

3.2 VPP Enrollment:

If your devices weren't purchased through DEP, you can use the VPP to add device in Apple Business Manager. This method involves manually adding the devices after purchase.

1. Log in to ABM: As before.
2. Navigate to VPP: Find the Volume Purchase Program section.
3. Redeem Codes: Redeem the VPP codes associated with your purchased apps and books.
4. Assign Apps: Assign apps to your devices or users. While not directly enrolling the device itself, this allows you to manage software distribution within ABM.

3.3 Manual Enrollment (Less Common):

For devices that haven't been added via DEP or VPP, manual enrollment is possible, but it's less efficient and requires more manual configuration.

4. Troubleshooting Common Issues

Device Not Showing in ABM: Verify the device's serial number and ensure it's been correctly associated with your ABM account.

Enrollment Failure: Check your network connectivity and MDM server configuration. Ensure your MDM server is correctly configured to receive devices from ABM.

Device Activation Issues: Ensure the device has sufficient storage space and a stable internet connection during activation.

5. Best Practices for Add Device in Apple Business Manager

Utilize DEP whenever possible: This is the most efficient and secure method. Configure appropriate profiles: Create customized profiles for different roles and departments to manage apps and settings effectively.

Regularly review your ABM settings: Ensure your security policies are up-to-date.

Utilize ABM's reporting features: Monitor device usage, app installations, and other relevant metrics.

6. Conclusion

Learning how to add device in Apple Business Manager is essential for any organization utilizing Apple devices. By leveraging ABM's capabilities, businesses can ensure secure and efficient device management, saving time, improving security, and increasing overall productivity. The shift from manual device management to utilizing ABM's features provides a significant increase in efficiency and reduces operational complexity. Understanding the different enrollment methods and best practices will help organizations maximize the benefits of ABM and its critical role in their digital ecosystem.

add device in apple business manager: Creativity, Inc. (The Expanded Edition) Ed Catmull, Amy Wallace, 2014-04-08 The co-founder and longtime president of Pixar updates and expands his 2014 New York Times bestseller on creative leadership, reflecting on the management principles that built Pixar's singularly successful culture, and on all he learned during the past nine years that allowed Pixar to retain its creative culture while continuing to evolve. "Might be the most thoughtful management book ever."—Fast Company For nearly thirty years, Pixar has dominated the world of animation, producing such beloved films as the Toy Story trilogy, Finding Nemo, The Incredibles, Up, and WALL-E, which have gone on to set box-office records and garner eighteen Academy Awards. The joyous storytelling, the inventive plots, the emotional authenticity: In some ways, Pixar movies are an object lesson in what creativity really is. Here, Catmull reveals the ideals and techniques that have made Pixar so widely admired—and so profitable. As a young man, Ed Catmull had a dream: to make the first computer-animated movie. He nurtured that dream as a Ph.D. student, and then forged a partnership with George Lucas that led, indirectly, to his founding Pixar with Steve Jobs and John Lasseter in 1986. Nine years later, Toy Story was released, changing animation forever. The essential ingredient in that movie's success—and in the twenty-five movies that followed—was the unique environment that Catmull and his colleagues built at Pixar, based on philosophies that protect the creative process and defy convention, such as: • Give a good idea to a mediocre team and they will screw it up. But give a mediocre idea to a great team and they will either fix it or come up with something better. • It's not the manager's job to prevent risks. It's the manager's job to make it safe for others to take them. • The cost of preventing errors is often far greater than the cost of fixing them. • A company's communication structure should not mirror its organizational structure. Everybody should be able to talk to anybody. Creativity, Inc. has been significantly expanded to illuminate the continuing development of the unique culture at Pixar. It features a new introduction, two entirely new chapters, four new chapter postscripts, and changes and updates throughout. Pursuing excellence isn't a one-off assignment but an ongoing, day-in,

day-out, full-time job. And Creativity, Inc. explores how it is done.

add device in apple business manager: Multipliers Liz Wiseman, Greg McKeown, 2010-06-15 Are you a genius or a genius maker? We've all had experience with two dramatically different types of leaders. The first type drain intelligence, energy, and capability from the ones around them and always need to be the smartest ones in the room. These are the idea killers, the energy sappers, the diminishers of talent and commitment. On the other side of the spectrum are leaders who use their intelligence to amplify the smarts and capabilities of the people around them. When these leaders walk into a room, lightbulbs go off over people's heads, ideas flow, and problems get solved. These are the leaders who inspire employees to stretch themselves to deliver results that surpass expectations. These are the Multipliers. And the world needs more of them, especially now, when leaders are expected to do more with less. In this engaging and highly practical book, leadership expert Liz Wiseman and management consultant Greg McKeown explore these two leadership styles, persuasively showing how Multipliers can have a resoundingly positive and profitable effect on organizations—getting more done with fewer resources, developing and attracting talent, and cultivating new ideas and energy to drive organizational change and innovation. In analyzing data from more than 150 leaders, Wiseman and McKeown have identified five disciplines that distinguish Multipliers from Diminishers. These five disciplines are not based on innate talent; indeed, they are skills and practices that everyone can learn to use—even lifelong and recalcitrant Diminishers. Lively, real-world case studies and practical tips and techniques bring to life each of these principles, showing you how to become a Multiplier too, whether you are a new or an experienced manager. Just imagine what you could accomplish if you could harness all the energy and intelligence around you. Multipliers will show you how.

add device in apple business manager: Quiet Susan Cain, 2013-01-29 #1 NEW YORK TIMES BESTSELLER • Experience the book that started the Quiet Movement and revolutionized how the world sees introverts—and how introverts see themselves—by offering validation, inclusion, and inspiration “Superbly researched, deeply insightful, and a fascinating read, Quiet is an indispensable resource for anyone who wants to understand the gifts of the introverted half of the population.”—Gretchen Rubin, author of The Happiness Project NAMED ONE OF THE BEST BOOKS OF THE YEAR BY People • O: The Oprah Magazine • Christian Science Monitor • Inc. • Library Journal • Kirkus Reviews At least one-third of the people we know are introverts. They are the ones who prefer listening to speaking; who innovate and create but dislike self-promotion; who favor working on their own over working in teams. It is to introverts—Rosa Parks, Chopin, Dr. Seuss, Steve Wozniak—that we owe many of the great contributions to society. In Quiet, Susan Cain argues that we dramatically undervalue introverts and shows how much we lose in doing so. She charts the rise of the Extrovert Ideal throughout the twentieth century and explores how deeply it has come to permeate our culture. She also introduces us to successful introverts—from a witty, high-octane public speaker who recharges in solitude after his talks, to a record-breaking salesman who quietly taps into the power of questions. Passionately argued, impeccably researched, and filled with indelible stories of real people, Quiet has the power to permanently change how we see introverts and, equally important, how they see themselves. Now with Extra Libris material, including a reader's guide and bonus content

add device in apple business manager: The Entrepreneurial State Mariana Mazzucato, 2015-10-06 Companies like Google and Apple heralded the information revolution, and opened the doors for Silicon Valley to grow into an engine of dazzling technological development, that today champions the free market that engendered it against the supposedly stifling encroachment of government regulation. But is that really the case? In this sharp and controversial expose, *The Entrepreneurial State*, Mariana Mazzucato debunks the pervasive myth that the state is a laggard, bureaucratic apparatus at odds with a dynamic private sector. Instead she reveals in case study after case study that, in fact, the opposite is true: the state is our boldest and most valuable innovator. The technology revolution would never have happened without support from the US Government. The breakthroughs--GPS, touch-screen displays, the Internet, and voice-activated AI--that enabled legendary Apple products to be smart successes were, in fact, all developed with support from the state. Mazzucato reveals that many successful entrepreneurs like Steve Jobs integrated state-funded technological developments into their products and then reaped the rewards themselves. The algorithm behind Google's search engine was initially sponsored by NASA. And 75% of NMEs--new, often-ground-breaking drugs not derivative of existing substances--trace their research to National Institutes of Health (NIH) labs. The American government, it turns out, has been enormously successful at stimulating scientific and technological advancement. But by 2009, just some months following the Great Recession--the US government, constrained by austerity measures, started disinvesting from its holdings in research fields like health, energy, electronics. The trend is likely to continue, and the repercussions of these policies could wreak havoc on our technology and science sectors. But Mazzucato remains optimistic. If managed correctly, state-sponsored development of Green technology, for instance, could be as efficacious as suburbanization & post-war reconstruction in the mid-twentieth century, and unleash a wide-spread golden age in the global economy. The limitations of natural resources and the threat of global warming could become the most powerful driver of growth, employment, and innovation within just one generation--but to be successful, the Green Revolution will depend on the initiatives of proactive governments. By not admitting the State's role in economic and technological progress, we are socializing only the risks of investing in innovation, while privatizing the rewards in the hands of only a few businesses. This, Mazzucato argues, hurts both future of innovation and equity in modern-day capitalism. For policy-makers, Silicon Valley start-up founders, venture-capitalists, and economists alike, *The Entrepreneurial State* stirs up much needed debate and offers up a brilliant corrective to spurious beliefs: to thrive, American businesses have always and will need to depend on the support of our country's most audacious entrepreneur, the state.
