Summary: This article explores the process of adding existing iOS and iPadOS devices to Apple Business Manager (ABM), highlighting its benefits for businesses, addressing common challenges, and examining the broader implications for the enterprise mobility management (EMM) industry. We'll delve into best practices, troubleshooting tips, and future trends related to ABM device enrollment.

Introduction:

For organizations heavily invested in Apple devices, Apple Business Manager (ABM) offers a centralized platform for managing the entire lifecycle of these devices. While many leverage ABM for new device deployments, a significant opportunity often lies untapped: adding existing devices to Apple Business Manager. This process, while seemingly simple, offers considerable advantages in terms of

security, management, and cost optimization. This article will provide a comprehensive guide on how to “add existing devices to Apple Business Manager,” explaining the procedure, highlighting its benefits, and addressing potential pitfalls.

Understanding the Benefits of Adding Existing Devices to Apple Business Manager:

Adding existing devices to ABM allows organizations to bring previously unmanaged devices under a unified management umbrella. This unlocks several key benefits:

Enhanced Security: Centralized management allows for consistent security policies, including password requirements, data encryption, and app deployment, improving overall device security posture.

Simplified Management: ABM provides a single pane of glass for managing all Apple devices, simplifying tasks such as software updates, app distribution, and device configurations.

Improved Compliance: ABM facilitates adherence to industry regulations and internal security policies by allowing for granular control over device settings and data access.

Cost Savings: Centralized management reduces the time and resources required for individual device configuration and troubleshooting, ultimately leading to cost savings.

Streamlined Support: IT teams can remotely troubleshoot and resolve issues on managed devices, reducing the need for on-site support.

Efficient Deployment of Corporate Apps: Deploying and managing corporate apps becomes significantly easier through ABM, ensuring employees have access to the tools they need while safeguarding corporate data.

The Process of Adding Existing Devices to Apple Business Manager:

The method for adding existing devices varies slightly depending on the device's current state (supervised or unsupervised). Generally, it involves:

1. **Ensuring Device Eligibility:** Verify that the devices are compatible with ABM and meet the

minimum iOS/iPadOS version requirements.

2. **Preparing the Devices:** This may involve resetting the device to factory settings or using the Device Enrollment Program (DEP) if possible, even for existing devices.
3. **Initiating Enrollment:** The specific steps will depend on whether the device is supervised or unsupervised and its iOS/iPadOS version. Unsupervised devices might require user interaction during enrollment.
4. **Assigning the Device:** Once enrolled, the device will appear in ABM, where you can assign it to users, profiles, and groups.
5. **Configuration and Management:** Leverage ABM's features to configure the device settings, deploy apps, and implement security policies.

Challenges and Troubleshooting:

While generally straightforward, adding existing devices to ABM can present challenges:

Unsupervised Devices: Enrolling unsupervised devices often requires user intervention, potentially slowing down the process and increasing the risk of errors.

Legacy Devices: Older devices might not support the latest ABM features or require specific configurations.

Data Migration: Migrating data from existing devices to ABM-managed profiles requires careful planning and execution.

Implications for the Enterprise Mobility Management (EMM) Industry:

The ability to add existing devices to ABM is a significant advancement in enterprise mobility

management. It empowers organizations to fully utilize ABM's capabilities, regardless of when devices were acquired. This shift underscores a broader industry trend towards comprehensive device lifecycle management, emphasizing security, efficiency, and cost optimization.

Conclusion:

Adding existing devices to Apple Business Manager is a strategic move that offers significant benefits for organizations seeking to enhance their device management capabilities. While challenges may exist, the advantages in security, efficiency, and cost savings far outweigh the effort required. By understanding the process, addressing potential issues, and leveraging ABM's powerful features, organizations can transform their device management strategies and optimize their Apple device deployments.

add existing devices to apple business manager: *The Four* Scott Galloway, 2017-10-03 NEW YORK TIMES BESTSELLER USA TODAY BESTSELLER Amazon, Apple, Facebook, and Google are the four most influential companies on the planet. Just about everyone thinks they know how they got there. Just about everyone is wrong. For all that's been written about the Four over the last two decades, no one has captured their power and staggering success as insightfully as Scott Galloway. Instead of buying the myths these companies broadcast, Galloway asks fundamental questions. How did the Four infiltrate our lives so completely that they're almost impossible to avoid (or boycott)? Why does the stock market forgive them for sins that would destroy other firms? And as they race to become the world's first trillion-dollar company, can anyone challenge them? In the same irreverent style that has made him one of the world's most celebrated business professors, Galloway deconstructs the strategies of the Four that lurk beneath their shiny veneers. He shows how they manipulate the fundamental emotional needs that have driven us since our ancestors lived in caves, at a speed and scope others can't match. And he reveals how you can apply the lessons of their ascent to your own business or career. Whether you want to compete with them, do business with them, or simply live in the world they dominate, you need to understand the Four.
