add in spanish math: *Latinos/as and Mathematics Education* Kip Téllez, Judit N. Moschkovich, Marta Civil, 2011-05-01 This book that explores the mathematics education of Latinos/as in 13 original research studies. Each chapter represents research that grounds mathematics instruction for Latinos/as in the resources to be found in culture and language. By inverting the deficit perspective, this volume redresses the shortcomings found in the previous literature on Latino/a learners. Each study frames language (e.g. bilingualism) not as an obstacle to learning, but as a resource for mathematical reasoning. Other chapters explore the notion of cultural variation not as a liability but as a tool for educators to build upon in the teaching of mathematics. Specifically, the book reframes culture as a focus on the practices, objects, inscriptions, or people that connect mathematical concepts to student thinking and experiences, both in and out of school. The book's four sections divide the research: The first section of the book focuses on mathematic learning in classrooms, specifically exploring bilingual, Latino/a students; the second section explores Latino/a learners in communities, including the role parents can play in advancing learning; the third section includes chapters focused on teacher professional growth; the final section concerns the assessment (and mis-assessment) of Latino/a learners. The research shared in this volume provides ample evidence that mathematics educators who choose to ignore language or culture in their pedagogy risk shortchanging their Latino/a students.

add in spanish math: Multicultural Curriculum Transformation in Science, Technology, Engineering, and Mathematics Christine Clark, Amanda VandeHei-Carter, Kenneth J. Fasching-Varner, Zaid M. Haddad, 2018-07-27 This volume focuses on multicultural curriculum transformation in Science, Technology, Engineering, and Mathematics or STEM subject areas broadly, while also focusing on sub-content areas (e.g., earth science, digital technologies) in greater detail. The discussion of each sub-content area outlines critical considerations for multicultural curriculum transformation for the sub-content areas by grade level (early childhood and elementary

school education, middle and/or junior high school education, and high school education) and then by organizing tool parameters: standards (both in a generalized fashion, and specific to Common Core State Standards, among other standards), educational context, relationships with and among students and their families, civic engagement, considerations pertaining to educational “ability” broadly considered (for example, for gifted and talented education, bilingual gifted and talented education, “regular” education, bilingual “regular” education, special education, bilingual special education), as well as relative to specific content and corresponding pedagogical considerations, including evaluation of student learning and teaching effectiveness. In this way, the volume provides a conceptual framework and concrete examples for how to go about multiculturally-transforming curriculum in STEM curricula. The volume is designed to speak with PK-12 teachers as colleagues in the multicultural curriculum transformation work at focus in each subject area and at varied grade levels. Readers are exposed to “things to think about,” but also given curricular examples to work with or from in going about the actual, concrete work of curriculum change. It bridges the gaps between preparing PK-12 teachers to be able to 1) independently multiculturally adapt existing curriculum, and, 2) create new multicultural curriculum differentiated for their content areas and grade levels, while also, 3) providing ample examples of what such adapted and new differentiated curricula looks like. In so doing, this volume also bridges the gaps between the theory and practice of multicultural curriculum transformation in higher and PK-12 educational contexts.
