14114 business center dr: Unaccountable Marty Makary, 2012-09-18 New York Times Bestseller "Every once in a while a book comes along that rocks the foundations of an established order that's seriously in need of being shaken. The modern American hospital is that establishment and Unaccountable is that book."-Shannon Brownlee, author of *Overtreated* Dr. Marty Makary is co-developer of the life-saving checklist outlined in Atul Gawande's bestselling *The Checklist Manifesto*. As a busy surgeon who has worked in many of the best hospitals in the nation, he can testify to the amazing power of modern medicine to cure. But he's also been a witness to a medical culture that routinely leaves surgical sponges inside patients, amputates the wrong limbs, and overdoses children because of sloppy handwriting. Over the last ten years, neither error rates nor costs have come down, despite scientific progress and efforts to curb expenses. Why? To patients, the healthcare system is a black box. Doctors and hospitals are unaccountable, and the lack of

transparency leaves both bad doctors and systemic flaws unchecked. Patients need to know more of what healthcare workers know, so they can make informed choices. Accountability in healthcare would expose dangerous doctors, reward good performance, and force positive change nationally, using the power of the free market. Unaccountable is a powerful, no-nonsense, non-partisan diagnosis for healing our hospitals and reforming our broken healthcare system.

14114 business center dr: *The Checklist Manifesto* Atul Gawande, 2010-04-01 The New York Times bestselling author of *Being Mortal* and *Complications* reveals the surprising power of the ordinary checklist We live in a world of great and increasing complexity, where even the most expert professionals struggle to master the tasks they face. Longer training, ever more advanced technologies—neither seems to prevent grievous errors. But in a hopeful turn, acclaimed surgeon and writer Atul Gawande finds a remedy in the humblest and simplest of techniques: the checklist. First introduced decades ago by the U.S. Air Force, checklists have enabled pilots to fly aircraft of mind-boggling sophistication. Now innovative checklists are being adopted in hospitals around the world, helping doctors and nurses respond to everything from flu epidemics to avalanches. Even in the immensely complex world of surgery, a simple ninety-second variant has cut the rate of fatalities by more than a third. In riveting stories, Gawande takes us from Austria, where an emergency checklist saved a drowning victim who had spent half an hour underwater, to Michigan, where a cleanliness checklist in intensive care units virtually eliminated a type of deadly hospital infection. He explains how checklists actually work to prompt striking and immediate improvements. And he follows the checklist revolution into fields well beyond medicine, from disaster response to investment banking, skyscraper construction, and businesses of all kinds. An intellectual adventure in which lives are lost and saved and one simple idea makes a tremendous difference, *The Checklist Manifesto* is essential reading for anyone working to get things right.

14114 business center dr: *Being Mortal* Atul Gawande, 2014-10-07 #1 New York Times Bestseller In *Being Mortal*, bestselling author Atul Gawande tackles the hardest challenge of his profession: how medicine can not only improve life but also the process of its ending Medicine has triumphed in modern times, transforming birth, injury, and infectious disease from harrowing to manageable. But in the inevitable condition of aging and death, the goals of medicine seem too frequently to run counter to the interest of the human spirit. Nursing homes, preoccupied with safety, pin patients into railed beds and wheelchairs. Hospitals isolate the dying, checking for vital signs long after the goals of cure have become moot. Doctors, committed to extending life, continue to carry out devastating procedures that in the end extend suffering. Gawande, a practicing surgeon, addresses his profession's ultimate limitation, arguing that quality of life is the desired goal for patients and families. Gawande offers examples of freer, more socially fulfilling models for assisting the infirm and dependent elderly, and he explores the varieties of hospice care to demonstrate that a person's last weeks or months may be rich and dignified. Full of eye-opening research and riveting storytelling, *Being Mortal* asserts that medicine can comfort and enhance our experience even to the

end, providing not only a good life but also a good end.

I was proud to receive this preface and include it here with pride and affection. We were saddened to learn of his death at 92 on March 12, 1992. Preface It is now some 50 years since ferrites debuted as an important new category of magnetic materials. They were prized for a range of properties that had no equivalents in existing metal magnetic materials, and it was not long before full-fledged research and development efforts were underway. Today, ferrites are employed in a truly wide range of applications, and the efforts of the many men and women working in the field are yielding many highly intriguing results. New, high-performance products are appearing one after another, and it would seem we have only scratched the surface of the hidden possibilities of these fascinating materials. Dr. Alex Goldman is well qualified to talk about the state of the art in ferrites. For many years Dr. Goldman has been heavily involved in the field as director of the research and development division of Spang & Co. and other enterprises. This book, Modern Ferrite Technology, based in part on his own experiences, presents a valuable overview of the field. It is testimony to his commitment and bountiful knowledge about one of today's most intriguing areas of technology.

Winter has come to North Carolina and, with it, a drop in crime. Freed from a heavy work schedule, Tempe Brennan is content to dote on her daughter Katy, finally returned to civilian life from the army. But when mother and daughter meet at Tempe's place one night, they find a box on the back porch. Inside: a very fresh human eyeball. GPS coordinates etched into the eyeball lead to a Benedictine monastery where an equally macabre discovery awaits. Soon after, Tempe examines a mummified corpse in a state park, and her anxiety deepens. There seems to be no pattern to the subsequent killings uncovered, except that each mimics in some way a homicide that a younger Tempe had been called in to analyze. Who or what is targeting her, and why? Helping Tempe search for answers is detective Erskine "Skinny" Slidell, retired but still volunteering with the CMPD cold case unit—and still displaying his gallows humor. Also pulled into the mystery: Andrew Ryan, Tempe's Montreal-based beau, now working as a private detective. Could this elaborately staged skein of mayhem be the prelude to a twist that is even more shocking? Tempe is at a loss to establish the motive for what is going on...and then her daughter disappears. At its core, *Cold, Cold Bones* is a novel of revenge—one in which revisiting the past may prove the only way to unravel the present.

To protect workers from potential adverse health effects due to those conditions, the U.S. Navy has established exposure guidance levels for a number of contaminants. In this latest report in a series, the Navy asked the National Research Council (NRC) to review, and develop when necessary, exposure guidance levels for 11

contaminants. The report recommends exposure levels for hydrogen that are lower than current Navy guidelines. For all other contaminants (except for two for which there are insufficient data), recommended levels are similar to or slightly higher than those proposed by the Navy. The report finds that, overall, there is very little exposure data available on the submarine environment and echoes recommendations from earlier NRC reports to expand exposure monitoring in submarines.

14114 business center dr: *Mountain Weather Research and Forecasting* Fotini K. Chow, Stephan F.J. De Wekker, Bradley J. Snyder, 2012-08-30 This book provides readers with a broad understanding of the fundamental principles driving atmospheric flow over complex terrain and provides historical context for recent developments and future direction for researchers and forecasters. The topics in this book are expanded from those presented at the Mountain Weather Workshop, which took place in Whistler, British Columbia, Canada, August 5-8, 2008. The inspiration for the workshop came from the American Meteorological Society (AMS) Mountain Meteorology Committee and was designed to bridge the gap between the research and forecasting communities by providing a forum for extended discussion and joint education. For academic researchers, this book provides some insight into issues important to the forecasting community. For the forecasting community, this book provides training on fundamentals of atmospheric processes over mountainous regions, which are notoriously difficult to predict. The book also helps to provide a better understanding of current research and forecast challenges, including the latest contributions and advancements to the field. The book begins with an overview of mountain weather and forecasting challenges specific to complex terrain, followed by chapters that focus on diurnal mountain/valley flows that develop under calm conditions and dynamically-driven winds under strong forcing. The focus then shifts to other phenomena specific to mountain regions: Alpine foehn, boundary layer and

air quality issues, orographic precipitation processes, and microphysics parameterizations. Having covered the major physical processes, the book shifts to observation and modelling techniques used in mountain regions, including model configuration and parameterizations such as turbulence, and model applications in operational forecasting. The book concludes with a discussion of the current state of research and forecasting in complex terrain, including a vision of how to bridge the gap in the future.

14114 business center dr: Better Atul Gawande, 2008-01-22 NATIONAL BESTSELLER The New York Times bestselling author of *Being Mortal* and *Complications* examines, in riveting accounts of medical failure and triumph, how success is achieved in a complex and risk-filled profession The struggle to perform well is universal: each one of us faces fatigue, limited resources, and imperfect abilities in whatever we do. But nowhere is this drive to do better more important than in medicine, where lives are on the line with every decision. In this book, Atul Gawande explores how doctors strive to close the gap between best intentions and best performance in the face of obstacles that sometimes seem insurmountable. Gawande's gripping stories of diligence, ingenuity, and what it means to do right by people take us to battlefield surgical tents in Iraq, to labor and delivery rooms in Boston, to a polio outbreak in India, and to malpractice courtrooms around the country. He discusses the ethical dilemmas of doctors' participation in lethal injections, examines the influence of money on modern medicine, and recounts the astoundingly contentious history of hand washing. And as in all his writing, Gawande gives us an inside look at his own life as a practicing surgeon, offering a searingly honest firsthand account of work in a field where mistakes are both unavoidable and unthinkable. At once unflinching and compassionate, *Better* is an exhilarating journey narrated by arguably the best nonfiction doctor-writer around (Salon). Gawande's investigation into medical professionals and how they progress from merely good to great provides rare insight into the elements of success, illuminating every area of human endeavor.

14114 business center dr: Divided We Fall Alice M. Rivlin, Sheri Rivlin, Allan Rivlin, 2022-10-04 Partisan warfare and gridlock in Washington threaten to squander America's opportunity to show the world that democracy can solve serious economic problems and ensure widely shared prosperity. Instead of working together to meet the challenges ahead—an aging work force, exploding inequality, climate change, rising debt—our elected leaders are sabotaging our economic future by blaming and demonizing each other in hopes of winning big in the next election. They are weakening America's capacity for world leadership and the case for democracy here and abroad. Alice M. Rivlin, with decades of experience in economic policy making, argues that proven economic policies could lead to sustainable American prosperity and opportunity for all, but crafting them requires the tough, time-consuming work of consensus building and bipartisan negotiation. In a divided country with shifting majorities, major policies must have bipartisan buy-in and broad public support. Otherwise we will have either destabilizing swings in policy or total gridlock in the face of challenges looming at us. Rivlin believes that Americans can and must save our hyper-partisan politicians from themselves. She makes the case that on many practical economic issues the public is far less divided than partisan politicians and sensationalist media would have us believe. She draws attention to numerous hopeful efforts to bridge partisan and ideological divides in Washington, in state capitols and city governments, and communities around the country, and advocates a major national effort to enable citizens and future leaders to learn and practice the art of listening to each other and working together to find common ground. This book is a practical guide for Americans across the political spectrum who are agonizing over partisan warfare, incivility, and policy gridlock and looking for ways they can help to get our democratic policy process back on a constructive track before it is too late.
