Disturbing events interrupt their outwardly normal life: break-ins, car thefts, even physical attacks on a family friend. Many years later, her mother finally revealed they'd been running from the Mafia and were receiving protection from a covert anti-organized crime task force. But the truth was even more bizarre. Gradually, Dakin's fears give way to suspicion. She puts her journalistic training to work and discovers that the Mafia threat was actually an elaborate web of lies. As she revisits her past, Dakin uncovers the human capacity for betrayal and deception, and the power of love to forgive. *Run, Hide, Repeat* is a memoir of a childhood steeped in unexplained fear and menace. Gripping and suspenseful, it moves from Dakin's uneasy acceptance of her family's dire situation to bewildered anger. As compelling and twisted as a thriller, *Run Hide Repeat* is an unforgettable portrait of a family under threat, and the resilience of family bonds.

Khan, 2014-04-14 The contamination of the environment by herbicides, pesticides, solvents, various industrial byproducts (including toxic metals, radionucleotides and metalloids) is of enormous economic and environmental significance. Biotechnology can be used to develop green or environmentally friendly solutions to these problems by harnessing the ability of bacteria to adapt metabolic pathways, or recruit new genes to metabolise harmful compounds into harmless byproducts. In addition to its role in cleaning-up the environment, biotechnology can be used for the production of novel compounds with both agricultural and industrial applications. Internationally acclaimed authors from diverse fields present comprehensive reviews of all aspects of Industrial and Environmental Biotechnology. Chapters concerned with environmental biotechnology cover two major categories of pollutants: organic compounds and metals. Organic pollutants include cyclic aromatic compounds, with/without nitrogenous or chloride substitutions while metal pollutants include copper, chromate, silver, arsenic and mercury. The genetic basis of bioremediation and the microbial processes involved are examined, and the current and/or potential applications of bioremediation are discussed. The use of biotechnology for industrial and agricultural applications includes a chapter on the use of enzymes as biocatalysts to synthesize novel opiate derivatives of medical value. The conversion of low-value molasses to higher value products by biotechnological methods and the use tissue culture methods to improve sugar cane and potatoes crop production is discussed.
