1569 n technology way: Travel Narratives, the New Science, and Literary Discourse, 1569-1750 Judy A. Hayden, 2016-03-03 The focus of this volume is the intersection and the cross-fertilization between the travel narrative, literary discourse, and the New Philosophy in the early modern to early eighteenth-century historical periods. Contributors examine how, in an historical era which realized an emphasis on nation and during a time when exploration was laying the foundation for empire, science and the literary discourse of the travel narrative become intrinsically linked. Together, the essays in this collection point out the way in which travel narratives reflect the anxiety from changes brought about through the discoveries of the 'new knowledge' and the way this knowledge in turn provided a new and more complex understanding of the expanding world in which the writers lived. The worlds in this text are many (for no 'world' is monomial), from the antipodes to the New World, from the heavens to the seas, and from fictional worlds to the world which contains and/or constructs one's nation and empire. All of these essays demonstrate the manner in which the New Philosophy dramatically changed literary discourse.

1569 n technology way: "Art, Technology and Nature " Camilla Skovbjerg Paldam, 2017-07-05 Since 1900, the connections between art and technology with nature have become increasingly inextricable. Through a selection of innovative readings by international scholars, this book presents the first investigation of the intersections between art, technology and nature in post-medieval times. Transdisciplinary in approach, this volume's 14 essays explore art, technology and nature's shifting constellations that are discernible at the micro level and as part of a larger chronological pattern. Included are subjects ranging from Renaissance wooden dolls, science in the Italian art academies, and artisanal epistemologies in the followers of Leonardo, to Surrealism and its precursors in Mannerist grotesques and the Wunderkammer, eighteenth-century plant printing, the climate and its artistic presentations from Constable to Olafur Eliasson, and the hermeneutics of bioart. In their comprehensive introduction, editors Camilla Skovbjerg Paldam and Jacob Wamberg trace the Kantian heritage of radically separating art and technology, and inserting both at a distance to nature, suggesting this was a transient chapter in history. Thus, they argue, the present renegotiation between art, technology and nature is reminiscent of the ancient and medieval periods, in which art and technology were categorized as aspects of a common area of cultivated products and their methods (the Latin *ars*, the Greek *techné*), an area moreover supposed to imitate the creative forces of nature.

1569 n technology way: Labour, Science and Technology in France, 1500-1620 Henry Heller, 2002-05-09 For a generation, the history of the ancien régime has been written from the perspective of the Annales school, with its emphasis on the role of long-term economic and cultural factors in shaping the development of early modern France. In this detailed 1995 study, Henry Heller challenges such a paradigm and assembles a huge range of information about technical innovation and ideas of improvement in sixteenth-century France. Emphasising the role of state intervention in the economy, the development of science and technology, and recent research into early modern proto-industrialisation, Heller counters notions of a France mired in an archaic, determinist mentalité. Despite the tides of religious fanaticism and seigneurial reaction, the period of the religious wars saw a surprising degree of economic, technological and scientific innovation, making possible the consolidation of capitalism in French society during the reign of Henri IV.

1569 n technology way: Rediscovering the World Benjamin Hennig, 2012-12-14 'We need new maps' is the central claim made in this book. In a world increasingly influenced by human action and interaction, we still rely heavily on mapping techniques that were invented to discover unknown places and explore our physical environment. Although the traditional concept of a map is currently being revived in digital environments, the underlying mapping approaches are not capable of making the complexity of human-environment relationships fully comprehensible. Starting from how people can be put on the map in new ways, this book outlines the development of a novel technique that stretches a map according to quantitative data, such as population. The new maps are called gridded cartograms as the method is based on a grid onto which a density-equalising cartogram technique is applied. The underlying grid ensures the preservation of an accurate geographic reference to the real world. It allows the gridded cartograms to be used as basemaps onto which other information can be mapped. This applies to any geographic information from the human and physical environment. As demonstrated through the examples presented in this book, the new maps are not limited to showing population as a defining element for the transformation, but can show any quantitative geospatial data, such as wealth, rainfall, or even the environmental conditions of the oceans. The new maps also work at various scales, from a global perspective down to the scale of urban environments. The gridded cartogram technique is proposed as a new global and local map projection that is a viable and versatile alternative to other conventional map projections. The maps based on this technique open up a wide range of potential new applications to

rediscover the diverse geographies of the world. They have the potential to allow us to gain new perspectives through detailed cartographic depictions.

1569 n technology way: Transottoman Matters Arkadiusz Blaszczyk, Robert Born, Florian Riedler, 2021-12-06 This volume analyzes historical processes of mobility by focusing on material objects. Mobility—as a shorthand for various related processes such as migration, transfer, entanglement, and translation—involves human actors, immaterial elements such as ideas and knowledge, but also objects in various forms and functions. For example, as material infrastructures they are the basis for transport and travel; as goods they are the object and purpose of trade or gift exchange. By focusing on the way objects determined certain processes of mobility and how their social meaning and materiality was transformed in these processes, the contributors hope to gain deeper insight into the historical relations between the Ottoman Empire, Eastern Europe, and Persia.

It is of vital importance if one is to understand present-day Thai politics.” —Kullada Kesboonchoo-Mead,

Chulalongkorn University (retired), author of *The Rise and Decline of Thai Absolutism* “Paul Chambers has written, arguably, the most comprehensive and detailed book on the evolution of Thailand’s military power from the post-World War II era to the present day. This lucid book is a compelling read for anyone seeking to gain insight into the transformation of the country into a praetorian kingdom, where the monarchy and the military are the most powerful institutions. His delicate exploration of the various plots, methods, strategies, twists and betrayals provides readers with valuable perspectives on the inner workings and dynamics of Thailand’s praetorian system. One of the book’s strengths lies in its use of declassified and leaked documents from the US administrations, adding a sense of excitement and credibility to the analysis.” —Puangthong Pawakapan, Chulalongkorn University, author of *Infiltrating Society: The Thai Military’s Internal Security Affairs* “This study on the Thai military does not merely add to the existing critical understandings about its role in the country’s politics, it tackles the subject in a new light and challenges us to reexamine our appraisal of each military regime.” --- Dr. Chaiyan Rajchagool, University of Phayao, author of *The Rise and Fall of the Thai Absolute Monarchy* “This book does two significant things; first, cultivating large amounts of primary resources, and second, providing a sophisticated interpretation of Thai military ascendancy until 2023. Based on these reasons, the book is important for insightful and untold stories about the Thai military.” —Ukrist Pathmanand, Institute of Asian Studies, Chulalongkorn University, Thailand “Monumental in scope and wondrously researched, *Praetorian Kingdom* is much more than the systematic study of the Thai military that has long been needed. For it is a volume that will compel readers not only to understand crucial episodes in Thailand’s modern history in new ways but also to appreciate the continuities in the country’s military politics as never before.” —Michael Montesano, Associate Senior Fellow, Thailand Studies Programme, ISEAS - Yusof Ishak Institute

1569 n technology way: Subject Matter Joyce E. Chaplin, 2009-07-01 With this sweeping reinterpretation of early cultural encounters between the English and American natives, Joyce E. Chaplin thoroughly alters our historical view of the origins of English presumptions of racial superiority, and of the role science and technology played in shaping these notions. By placing the history of science and medicine at the very center of the story of early English colonization, Chaplin

shows how contemporary European theories of nature and science dramatically influenced relations between the English and Indians within the formation of the British Empire. In Chaplin's account of the earliest contacts, we find the English--impressed by the Indians' way with food, tools, and iron--inclined to consider Indians as partners in the conquest and control of nature. Only when it came to the Indians' bodies, so susceptible to disease, were the English confident in their superiority. Chaplin traces the way in which this tentative notion of racial inferiority hardened and expanded to include the Indians' once admirable mental and technical capacities. Here we see how the English, beginning from a sense of bodily superiority, moved little by little toward the idea of their mastery over nature, America, and the Indians--and how this progression is inextricably linked to the impetus and rationale for empire.

1569 n technology way: *Developments in Structural Form* Rowland Mainstone, 2013-04-03 In the critically acclaimed first edition of this book, Mainstone offered a brilliant and highly original account of the structural developments that have made possible the achievements of architects and bridge builders throughout history. In this extensively revised and expanded new edition, now available in paperback, new insights and a full coverage of recent developments in both design and construction are incorporated. The book identifies features that distinguish the forms built by man from those shaped by nature and discusses the physical and other constraints on the choices that can be made. It then looks in turn at all the elementary forms - arches, domes, beams, slabs and the like - which combine into the more complex forms of complete structures, and at the different classes of the complete forms themselves. The development of each form is traced chronologically, but with an emphasis less on the chronology than on the problems that designers have continually faced in trying to serve new ends with limited means or to serve old ones in new ways. The book concludes with a chapter on the processes of design, showing how the designer's freedom of choice has been widened by a growing understanding of structural behaviour.

1569 n technology way: *Chinese State Owned Enterprises in West Africa* Katy Ngan Ting Lam, 2016-12-08 This book investigates the globalization process of Chinese state-owned enterprises (SOEs) in West Africa, primarily in Benin and Ghana, based on ethnographical studies. It challenges the dominant vision of a powerful China in Africa, and argues that the so-called Chinese business advantages - monolithic Chinese state and Chinese low cost advantages, are non-viable for sustaining Chinese business development in the continent. Considering the Chinese SOEs globalization process in a relational approach, this book examines how the triple embeddedness (Chinese, African and managerial) shapes the Chinese SOEs globalization process over time and space, in diverse dimensions and among different entities - the Chinese state, Chinese SOEs, Chinese expatriates, the African government, African business partners, African staff, and the African society. It illustrates that the Chinese central state has retreated deliberately from its SOE globalization in Africa. The Chinese SOEs and Chinese expats are the major actors in initiating and inventing globalization strategies, facing limited Chinese state support and the African neopatrimonial governance and social contexts. Besides, the personal trajectories (from expatriation to social promotion) of Chinese SOE expats interweave with the globalization-turn-localization of their SOEs in Africa. Rejecting the linear, static and binary vision of powerful China in powerless Africa, the present study thus emphasizes power dynamics in Chinese SOEs' globalization process are organic and pluralistic though in certain extent hierarchical -second-class. Time and local relations are key elements constituting the real Chinese advantages for Chinese SOEs vis-a-vis their ultimate competitors - not Western companies, but other Chinese companies.

1569 n technology way: *Space Fostering Latin American Societies* Annette Froehlich, 2021-05-06 This peer-reviewed book presents a comprehensive overview of the role space is playing

in enabling Latin America to fulfill its developmental aspirations. Following on from the highly acclaimed Part 1, it explains how space and its applications can be used to support the development of the full range and diversity of Latin America societies, while being driven by Latin American goals. The Latin American space sector is currently undergoing a phase of rapid and dynamic expansion, with new actors entering the field and with space applications increasingly being used to support the continent's social, economic, and political development. All across Latin America, attention is shifting to space as a fundamental part of the continental development agenda, and the creation of a Latin American space agency is evidence of this. Additionally, while in recent years, significant advances in economic and social development have lifted many of Latin America's people out of poverty, there is still much that needs to be done to fulfill the basic needs of the population and to afford them the dignity they deserve. To this end, space is already being employed in diverse fields of human endeavor to serve Latin America's goals for its future, but there is still a need for further incorporation of space systems and data. This book will appeal to researchers, professionals and students in fields such as space studies, international relations, governance, and social and rural development.

The satellite navigation technology in this book is divided into uplink and reception technology, broadcasting link technology, inter-satellite link technology, time-frequency system technology, navigation signal generation and assessment technology, navigation information management technology, autonomous operation technology of navigation satellite. In closing, the book introduces readers to the technological development status and trend of BDS and other GNSS, and propose the technologies of future development. Unlike most current books on this topic, which largely concentrate on principles, receiver design or applications, the book also features substantial information on the role of satellite system in the GNSS and the process of signal information flow, and each chapter not only studies on the theoretical function and main technologies, but also focuses on engineering development. Accordingly, readers will gain not only a better understanding of navigation satellite systems as a whole, but also of their main components and key technologies.

1569 n technology way: *New Approaches to Shorthand* Hannah Boeddeker, Kelly Minot

McCay, 2024-10-07 Variouslly identified as an art, a technology, and a professional prerequisite, forms of shorthand have been in use from Antiquity to the modern day. Far from a niche corner in manuscript studies, shorthand represents an almost global phenomenon that has touched upon many aspects of everyday life and of scholarship. Due to its immediate illegibility, however, and the daunting task of decipherment, shorthand has long been neglected as a research object in its own right. The immense quantity of extant and unread shorthand manuscripts has been downplayed, as has the technology's place in cultures of learning, religious devotion, court practice, parliamentary procedure, authorial composition, corporate life, public and private writing, and the academy. As the first ever peer-reviewed volume on the subject, this book presents a much-needed introduction to shorthand, its history, and its disparate historiography, alongside eight contributions by shorthand specialists that showcase some of the many lines of inquiry that shorthand inspires across a range of disciplinary and methodological perspectives. For readers with a vested interest in shorthand, this volume provides a range of approaches to shorthand in the Latin West, from the Middle Ages to the nineteenth century, upon which to orient, substantiate, and inform their own work. For general readers, this publication invites scholars to consider ways in which historically overlooked or underestimated forms of writing facilitated a variety of writing cultures in different contexts, periods, and languages.

1569 n technology way: *Giving Up the Gun* Noel Perrin, 1979 Lord Hideyoshi, the regent of Japan at the time, took the first step toward the control of firearms. It was a very small step, and it was not taken simply to protect feudal lords from being shot at by peasants but to get all weapons out of the hands of civilians. He said nothing about arms control. Instead, he announced that he was going to build a statue of Buddha that would make all existing statues look like midgets. It would be so enormous (the figure was about twice the scale of the Statue of Liberty), that many tons of iron would be needed just for the braces and bolts. Still more was required to erect the accompanying temple, which was to cover a piece of ground something over an eighth of a mile square. All farmers, ji-samurai, and monks were invited to contribute their swords and guns to the cause. They were, in fact, required to. -- from publisher description.
