1662 fenton business park ct: Picture-Book Professors Melissa M. Terras, 2018-10-04 How is academia portrayed in children's literature? This Element ambitiously surveys fictional professors in texts marketed towards children. Professors are overwhelmingly white and male, tending to be elderly scientists who fall into three stereotypes: the vehicle to explain scientific facts, the baffled genius, and the evil madman. By the late twentieth century, the stereotype of the male, mad, muddlehead, called Professor SomethingDumb, is formed in humorous yet pejorative fashion. This Element provides a publishing history of the role of academics in children's literature, questioning the book culture which promotes the enforcement of stereotypes regarding intellectual expertise in children's media. The Element is also available, with additional material, as Open Access.

1662 fenton business park ct: Making Healthy Places Andrew L. Dannenberg, Howard Frumkin, Richard J. Jackson, 2012-09-18 The environment that we construct affects both humans and our natural world in myriad ways. There is a pressing need to create healthy places and to reduce the health threats inherent in places already built. However, there has been little awareness

of the adverse effects of what we have constructed-or the positive benefits of well designed built environments. This book provides a far-reaching follow-up to the pathbreaking *Urban Sprawl and Public Health*, published in 2004. That book sparked a range of inquiries into the connections between constructed environments, particularly cities and suburbs, and the health of residents, especially humans. Since then, numerous studies have extended and refined the book's research and reporting. *Making Healthy Places* offers a fresh and comprehensive look at this vital subject today. There is no other book with the depth, breadth, vision, and accessibility that this book offers. In addition to being of particular interest to undergraduate and graduate students in public health and urban planning, it will be essential reading for public health officials, planners, architects, landscape architects, environmentalists, and all those who care about the design of their communities. Like a well-trained doctor, *Making Healthy Places* presents a diagnosis of--and offers treatment for--problems related to the built environment. Drawing on the latest scientific evidence, with contributions from experts in a range of fields, it imparts a wealth of practical information, with an emphasis on demonstrated and promising solutions to commonly occurring problems.

1662 fenton business park ct: Idols of the Marketplace D. Hawkes, 2001-10-11 Postmodern society seems incapable of elaborating an ethical critique of the market economy. Early modern society showed no such reticence. Between 1580 and 1680, Aristotelian teleology was replaced as the dominant mode of philosophy in England by Baconian empiricism. This was a process with implications for every sphere of life: for politics and theology, economics and ethics, aesthetics and sexuality. Through nuanced and original readings of Shakespeare, Herbert, Donne, Milton, Traherne, and Bunyan, David Hawkes sheds light on the antitheatrical controversy, and early modern debates over idolatry and value and trade. Hawkes argues that the people of Renaissance England believed that the decline of telos resulted in a reified, fetishistic mode of consciousness which manifests itself in such phenomena as religious idolatry, commodity fetish, and carnal sensuality. He suggests that the resulting early modern critique of the market economy has much to offer postmodern society.

1662 fenton business park ct: Vital Signs Institute of Medicine, Committee on Core Metrics for Better Health at Lower Cost, 2015-08-26 Thousands of measures are in use today to assess health and health care in the United States. Although many of these measures provide useful information, their usefulness in either gauging or guiding performance improvement in health and

health care is seriously limited by their sheer number, as well as their lack of consistency, compatibility, reliability, focus, and organization. To achieve better health at lower cost, all stakeholders - including health professionals, payers, policy makers, and members of the public - must be alert to what matters most. What are the core measures that will yield the clearest understanding and focus on better health and well-being for Americans? Vital Signs explores the most important issues - healthier people, better quality care, affordable care, and engaged individuals and communities - and specifies a streamlined set of 15 core measures. These measures, if standardized and applied at national, state, local, and institutional levels across the country, will transform the effectiveness, efficiency, and burden of health measurement and help accelerate focus and progress on our highest health priorities. Vital Signs also describes the leadership and activities necessary to refine, apply, maintain, and revise the measures over time, as well as how they can improve the focus and utility of measures outside the core set. If health care is to become more effective and more efficient, sharper attention is required on the elements most important to health and health care. Vital Signs lays the groundwork for the adoption of core measures that, if systematically applied, will yield better health at a lower cost for all Americans.
