1780 business center drive: *Specialty Food, Market Culture, and Daily Life in Early Modern Japan* Akira Shimizu, 2022-01-31 This study is an unique approach to social and cultural history of Japan through the scope of food and food ways. In this book-length study of food markets in the early modern Japanese capital of Edo, Akira Shimizu draws a fascinating picture of early modern Japanese society where specialty foods—seasonal, regional, and hard-to-find delicacies that satisfied the palate of nation's highest political authority, the shogun—served as a powerful nexus that connected different social groups. In the course of their daily lives, peasants, fisherfolks, and merchants, who made specialty food available at the market, were in constant negotiation with powerful wholesalers and government authorities in charge of procuring specialty foods of the highest qualities for the shogun's Edo Castle. Utilizing a number of previously unused archival materials that reveals the lives of those at the bottom of the society, the book traces the production, supply, and handling of specialty foods and shows how ordinary people were empowered to assume control over the distribution of specialty food, eventually affecting their procurement for the shogunal kitchen. In doing so, they disrupted the existing market order on the shogunal requisition, and led to the reconfiguration of market relations.

1780 business center drive: Governance, Growth and Global Leadership Dr Espen Moe, 2013-06-28 This book focuses on the role of the state in promoting a country's long-term technological progress and industrial leadership. Throughout history, a nation's rise to dominance has invariably been followed by its fall; the dominant powers of today are not the same ones that controlled the world three hundred years ago. In the same manner, economic dominance has usually been fleeting, as leading nations have routinely been caught up and surpassed by challengers. This study looks at Schumpeterian growth - currently the most important source of economic growth - which credits the ability to use technological progress for the benefit of industrial leadership as the key motor of national development and economic success. Contrasting the experiences of five great powers (Britain, France, Germany, the USA and Japan) during five periods of technological and

industrial leadership, from the Industrial Revolution to the beginning of the twenty-first century, the book draws on historical and comparative methods to draw causal inferences about international progress and leadership. It explores various factors that promote or hinder technological advancement and how these can in turn effect national development. It concludes that where states have forged ahead and maintained a lead over their rivals, it is because consensus and cohesion prevented vested interests from growing powerful enough to block structural economic change. By applying economic theory to long-term historical models, this book offers a fascinating perspective on the causes and effects of national growth and industrial leadership. It will be invaluable reading for anyone with an interest in international relations and global economic trends, both modern and historical.
