advent health occupational therapy: Speech and Language Disorders in Children National Academies of Sciences, Engineering, and Medicine, Division of Behavioral and Social Sciences and Education, Institute of Medicine, Board on Children, Youth, and Families, Board on the Health of Select Populations, Committee on the Evaluation of the Supplemental Security Income (SSI) Disability Program for Children with Speech Disorders and Language Disorders, 2016-05-06 Speech and language are central to the human experience; they are the vital means by which people convey and receive knowledge, thoughts, feelings, and other internal experiences. Acquisition of communication skills begins early in childhood and is foundational to the ability to gain access to culturally transmitted knowledge, organize and share thoughts and feelings, and participate in social interactions and relationships. Thus, speech disorders and language disorders-disruptions in communication development-can have wide-ranging and adverse impacts on the ability to communicate and also to acquire new knowledge and fully participate in society. Severe disruptions in speech or language acquisition have both direct and indirect consequences for child and adolescent development, not only in communication, but also in associated abilities such as reading and academic achievement that depend on speech and language skills. The Supplemental Security Income (SSI) program for children provides financial assistance to children from low-income, resource-limited families who are determined to have conditions that meet the disability standard required under law. Between 2000 and 2010, there was an unprecedented rise in the number of applications and the number of children found to meet the disability criteria. The factors that contribute to these changes are a primary focus of this report. Speech and Language Disorders in Children provides an overview of the current status of the diagnosis and treatment of speech and language disorders and levels of impairment in the U.S. population under age 18. This study identifies past and current trends in the prevalence and persistence of speech disorders and language disorders for the general U.S. population under age 18 and compares those trends to trends in the SSI childhood disability population.

advent health occupational therapy: An Occupational Therapist's Guide to Home Modification Practice Elizabeth Ainsworth, Desleigh de Jonge, 2024-06-01 Older people and people with a disability have a right to be included in all aspects of home and community life, and yet, environmental barriers continue to exist in the built environment. There are concerns about how well homes can support older people and people with a disability over time as their needs change. Occupational therapists are well suited to determining the most appropriate home modification solutions to address environmental barriers. They possess the knowledge and skills necessary to evaluate people's current and future needs in the context of the nature and use of the environment and can work collaboratively with design and construction professionals to develop solutions. To be comprehensive and effective in their approach, occupational therapists need to understand not only the individual's requirements, but also, the ethical and legal contexts for practice, the technical aspects of the built environment, the relevance and intent of access standards and design approaches, and the application of a range of products and finishes. An Occupational Therapist's Guide to Home Modification Practice, Second Edition by Elizabeth Ainsworth and Desleigh de Jonge and their team of expert contributors provides comprehensive information to inform occupational therapists about current practice and research. This includes the authors using a transactional approach to examine the person-occupation-environment interaction and providing occupational therapists with a detailed understanding of the various dimensions of the home environment that can impact on client's home modification decisions. New material has been provided relating to research and practice issues, such as an overview of the latest home modification outcome research findings as documented in literature; an update on outcome evaluation; new research information about the dimensions of the home impacting on decision making; additional information grabrail and ramp prescription; and the inclusion of new case studies illustrating minor and major modification solutions for clients who present with diverse needs. In the Second Edition you'll find: A detailed understanding of aspects of the home environment that impact home modification decisions A review of legislative environment and funding systems that facilitate service delivery An overview of

home modification services, as well as future trends A range of comprehensive case studies — illustrated by photographs Additional theory to inform knowledge, and skill development, that can be used in home modification practice worldwide Included with the text are online supplemental materials for faculty use in the classroom.. An Occupational Therapist's Guide to Home Modification Practice, Second Edition provides a range of resources and tools, and it can be used as a teaching aid to support students, interns, and novice therapists or as a manual for reflection and practice for more experienced home modification practitioners.

advent health occupational therapy: Practice and Service Learning in Occupational Therapy Theresa Lorenzo, Madeleine Duncan, Helen Buchanan, Auldeen Alsop, 2006-07-11 While this book is based primarily on experiences of occupational therapy practice education in South Africa, it aims to have international appeal as key principles of practice and service learning are drawn from the differing scenarios covered. Based on qualitative research, some of the book's chapters describe issues faced by students in complex practice situations and highlight educational strategies for promoting socially responsive professional development. They show how students engage with the personal and professional challenges of working in a multicultural society and how situated learning can enhance their resourcefulness in meeting the needs of individuals, groups and communities. The book is divided into three sections: The first, on the practice education agenda, establishes the academic rationale for various forms of practice learning within an occupational therapy curriculum. The second section examines the learning opportunities offered by different practice contexts and highlights mechanisms for developing the professional identity of students. The final section, on enhancing potential, reviews mechanisms that may be used for supporting students in the field, and ends with a look at the future of practice education and how it might develop in response to social and international drivers.
