aet level 3 award in education and training: How People Learn National Research Council, Division of Behavioral and Social Sciences and Education, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Developments in the Science of Learning with additional material from the Committee on Learning Research and Educational Practice, 2000-08-11 First released in the Spring of 1999, How People Learn has been expanded to show how the theories and insights from the original book can translate into actions and practice, now making a real connection between classroom activities and learning behavior. This edition includes far-reaching suggestions for research that could increase the impact that classroom teaching has on actual learning. Like the original edition, this book offers exciting new research about the mind and the brain that provides answers to a number of compelling questions. When do infants begin to learn? How do experts learn and how is this different from non-experts? What can teachers and schools do-with curricula, classroom settings, and teaching methods—to help children learn most effectively? New evidence from many branches of science has significantly added to our understanding of what it means to know, from the neural processes that occur during learning to the influence of culture on what people see and absorb. How People Learn examines these findings and their implications for what we teach, how we teach it, and how we assess what our children learn. The book uses exemplary teaching to illustrate how approaches based on what we now know result in in-depth learning. This new knowledge calls into question concepts and practices firmly entrenched in our current education system. Topics include: How learning actually changes the physical structure of the brain.

How existing knowledge affects what people notice and how they learn. What the thought processes of experts tell us about how to teach. The amazing learning potential of infants. The relationship of classroom learning and everyday settings of community and workplace. Learning needs and opportunities for teachers. A realistic look at the role of technology in education.

aet level 3 award in education and training: *Global Perspectives on Recognising Non-formal and Informal Learning* Madhu Singh, 2015-06-05 This book deals with the relevance of recognition and validation of non-formal and informal learning education and training, the workplace and society. In an increasing number of countries, it is at the top of the policy and research agenda ranking among the possible ways to redress the glaring lack of relevant academic and vocational qualifications and to promote the development of competences and certification procedures which recognise different types of learning, including formal, non-formal and informal learning. The aim of the book is therefore to present and share experience, expertise and lessons in such a way that enables its effective and immediate use across the full spectrum of country contexts, whether in the developing or developed world. It examines the importance of meeting institutional and political requirements that give genuine value to the recognition of non-formal and informal learning; it shows why recognition is important and clarifies its usefulness and the role it serves in education, working life and voluntary work; it emphasises the importance of the coordination, interests, motivations, trust and acceptance by all stakeholders. The volume is also premised on an understanding of a learning society, in which all social and cultural groups, irrespective of gender, race, social class, ethnicity, mental health difficulties are entitled to quality learning throughout their lives. Overall the thrust is to see the importance of recognising non-formal and informal learning as part of the larger movement for re-directing education and training for change. This change is one that builds on an equitable society and economy and on sustainable development principles and values such as respect for others, respect for difference and diversity, exploration and dialogue.

aet level 3 award in education and training: *Be a Beacon of Hope in the World* John Aduma, 2022-01-04 Why does one youngster stab another with a knife which they will never, ever dare to stab themselves with? Why are our young people killing themselves without thinking of the pains and sorrow such barbarism and bestiality will leave their loved ones with for the rest of their lives? Why do some young persons—members of the same community—prey on one another with such jungle-like ferocity in the nation's cities? Why are there now so many of such gruesome, purposeless, wicked and unwarranted killings in the nation's cities as if Britain is now a land that devours its children? More worrisome is the fact that when they are hacked to death so young, what happens to their dreams, visions, goals and aspirations? Heart-rending as these painful questions are, *Be a Beacon of Hope in the World: A Message to Young Britain* does not attempt to offer answers to these puzzles arising from the untimely deaths of Britain's children through knifings. However, it seeks to act as a guidepost, compass and a Sat Nav to point young persons in the right direction and on the path of civility, decency, common sense, humaneness and universal altruism, whereupon they are expected to have respect: for themselves, for others and for all of life's forms. Therefore, let the alarm bell, which this book will trigger, warn all young persons in Britain and the world over that to live in the fast lane is to die young. Let this message reverberate through the vista of time.

aet level 3 award in education and training: *Risk Management Simplified: A Definitive Guide For Workplace And Process Risk Management* Sonni Gopal, 2019-06-21 I have been involved with workplace and process risk management for over 30 years and I have always found the subject fascinating and rewarding. However, I am still surprised at the lack of deep understanding within Organisations about risk management. Regardless of Organisation size, many see it as just “managing risks” because it’s easier to explain and perhaps reactionary since it has the word “management”. Risk management is more than just “managing risks”. Successful risk management requires a holistic approach based upon Elements that make up a Risk Management Framework. Let’s pretend you are my Client and I’ve asked you these 7 questions: 1. Do you know the relationship between attitude and risk management? 2. Do you know how to control workplace and process risks? 3. Do you know the difference between hazard identification and risk assessment? 4. Do you know what or who is a risk owner? 5. Do you know what you are measuring for successful risk management? 6. Do you know what or when you are monitoring for risk management? 7. Do you know what to do when reviewing risk management? Did you answer “YES” to all of them? If you did, you don’t need this book. If you had even just one “NO” as an answer, this book is worth reading. This is a reference book and not a novel. In this book, risk management is focused on workplace and process related risks. However, the approach and techniques can be applied for risk management generally. My goal is to share valuable lessons learnt and my experience of getting risk management successfully embedded within your Organisation. My intended audiences are risk and safety management practitioners, trainers, managers, leaders in Organisations and anyone interested in successfully managing risks.
