ag business degree online: Sustainable Food and Agriculture Clayton Campanhola, Shivaji Pandey, 2018-11-30 Sustainable Food and Agriculture: An Integrated Approach is the first book to look at the imminent threats to sustainable food security through a cross-sectoral lens. As the world faces food supply challenges posed by the declining growth rate of agricultural productivity, accelerated deterioration of quantity and quality of natural resources that underpin agricultural production, climate change, and hunger, poverty and malnutrition, a multi-faced understanding is key to identifying practical solutions. This book gives stakeholders a common vision, concept and methods that are based on proven and widely agreed strategies for continuous improvement in sustainability at different scales. While information on policies and technologies that would enhance productivity and sustainability of individual agricultural sectors is available to some extent, literature is practically devoid of information and experiences for countries and communities considering a comprehensive approach (cross-sectoral policies, strategies and technologies) to SFA. This book is the first effort to fill this gap, providing information on proven options for enhancing productivity, profitability, equity and environmental sustainability of individual sectors and, in addition, how to identify opportunities and actions for exploiting cross-sectoral synergies. - Provides proven options of integrated technologies and policies, helping new programs identify appropriate existing programs - Presents mechanisms/tools for balancing trade-offs and proposes indicators to facilitate decision-making and progress measurement - Positions a comprehensive and informed review of issues in one place for effective education, comparison and evaluation

In order to compile the most current information on best management and operations practices, the authors used published information on food hubs, surveyed numerous operating food hubs, and pulled from their existing experience and knowledge of working directly with food hubs across the country as an agricultural business consulting firm. The report's main focus is on the operational issues faced by food hubs, including choosing an organizational structure, choosing a location, deciding on infrastructure and equipment, logistics and transportation, human resources, and risks. As such, the guide explores the different decision points associated with the organizational steps for starting and implementing a food hub. For some sections, sidebars provide "decision points," which food hub managers will need to address to make key operational decisions. This illustrated guide may assist the operational staff at small businesses or third-party organizations that may provide aggregation, marketing, and distribution services from local and regional producers to assist with wholesale, retail, and institution demand at government institutions, colleges/universities, restaurants, grocery store chains, etc. Undergraduate students pursuing coursework for a bachelor of science degree in food science, or agricultural economics may be interested in this guide. ag business degree online: The Business of Agricultural Business Services Mariana Wongtschowski, John Belt (Advisor in economic development), Willem Heemskerk, David Kahan, 2013 An increasing number of African smallholders are moving from subsistence farming to selling at least part of their output. To shift successfully to a more commercial footing they need a lot more than the production advice traditionally provided by extension services. They need to understand how markets work. They also need advice on postharvest handling, help with business planning and marketing, assistance with organization, information on prices, links to buyers and credit, help with contracts and standards, and many other types of assistance. These agricultural business development services are provided by a mix of private companies, NGOs, cooperatives and government agencies in what is called a pluralistic extension system . Farmers and other clients such as input stores, small-scale processors and traders get some services for free, paid for by donors or the government. Others are subsidized: the farmers pay part of the cost. For still others, the farmers must pay the full cost. That leads to questions of sustainability (what happens when the donor s money runs out?), accountability (whom do the service providers listen to: the farmers, or the source of the funds?), and inclusiveness (how to ensure that women, the poor and disadvantaged

get the services they need but cannot afford?). This book describes the two dominant approaches to providing services: supply-driven (where the funder decides what services should be offered), and market-driven (where more emphasis is put on market forces). It looks at how 12 business service providers from across Africa run their businesses. It describes the seven different business models that they pursue, and examines the features of each one. Based on their experiences, it proposes a new, needs-driven approach, which aims to overcome the shortcomings of both the supply-driven and the market-driven approaches by taking the needs of clients as a starting point for policy and action.
