aice exam pass rates: 50 Myths and Lies That Threaten America's Public Schools David C. Berliner, Gene V. Glass, 2014-03-07 This book is guaranteed to spark lively debates and critical thinking in any classroom! Two of the most respected voices in education identify 50 myths and lies that threaten America's public schools. Berliner and Glass argue that many citizens conception of K12 public education in the United States is more myth than reality. Warped opinions about our nations public schools include: they are inferior to private schools; they are among the worst in the world in math and science; teachers should be fired if their students dont score at the national average, and on and on. With more than a little humor, Berliner and Glass separate fact from fiction in this comprehensive look at modern education reform. They explain how the mythical failure of public education has been created and perpetuated in large part by political and economic interests who stand to gain from its destruction. They expose a rapidly expanding variety of organizations and media that intentionally misrepresent facts. Where appropriate, they name the promoters of the hoax and point out how their interests are served by encouraging false beliefs. Their method of debunking these falsehoods is to argue against their logic, criticize the data supporting them, and present more credible contradictory data. This dynamic book features short essays on important topics to provide every teacher, administrator, school board member, and concerned parent with reliable knowledge from authoritative sources.

aice exam pass rates: *The Challenge of Crime in a Free Society* United States. President's Commission on Law Enforcement and Administration of Justice, 1967 This report of the President's Commission on Law Enforcement and Administration of Justice -- established by President Lyndon Johnson on July 23, 1965 -- addresses the causes of crime and delinquency and recommends how to prevent crime and delinquency and improve law enforcement and the administration of criminal justice. In developing its findings and recommendations, the Commission held three national conferences, conducted five national surveys, held hundreds of meetings, and interviewed tens of thousands of individuals. Separate chapters of this report discuss crime in America, juvenile delinquency, the police, the courts, corrections, organized crime, narcotics and drug abuse,

drunkenness offenses, gun control, science and technology, and research as an instrument for reform. Significant data were generated by the Commission's National Survey of Criminal Victims, the first of its kind conducted on such a scope. The survey found that not only do Americans experience far more crime than they report to the police, but they talk about crime and the reports of crime engender such fear among citizens that the basic quality of life of many Americans has eroded. The core conclusion of the Commission, however, is that a significant reduction in crime can be achieved if the Commission's recommendations (some 200) are implemented. The recommendations call for a cooperative attack on crime by the Federal Government, the States, the counties, the cities, civic organizations, religious institutions, business groups, and individual citizens. They propose basic changes in the operations of police, schools, prosecutors, employment agencies, defenders, social workers, prisons, housing authorities, and probation and parole officers.

alice exam pass rates: *The Early Admissions Game* Christopher Avery, Andrew Fairbanks, Richard Zeckhauser, 2009-07-01 Each year, hundreds of thousands of high school seniors compete in a game they'll play only once, whose rules they do not fully understand, yet whose consequences are enormous. The game is college admissions, and applying early to an elite school is one way to win. But the early admissions process is enigmatic and flawed. It can easily lead students toward hasty or misinformed decisions. This book—based on the careful examination of more than 500,000 college applications to fourteen elite colleges and hundreds of interviews with students, counselors, and admissions officers—provides an extraordinarily thorough analysis of early admissions. In clear

language it details the advantages and pitfalls of applying early as it provides a map for students and parents to navigate the process. Unlike college admissions guides, *The Early Admissions Game* reveals the realities of early applications, how they work and what effects they have. The authors frankly assess early applications. Applying early is not for everyone, but it will improve—sometimes double, even triple—the chances of being admitted to a prestigious college. An early decision program can greatly enhance a college's reputation by skewing statistics, such as selectivity, average SAT scores, or percentage of admitted applicants who matriculate. But these gains come at the expense of distorting applicants' decisions and providing disparate treatment of students who apply early and regular admissions. The system, in short, is unfair, and the authors make recommendations for improvement. *The Early Admissions Game* is sure to be the definitive work on the subject. It is must reading for admissions officers, guidance counselors, and high school seniors and their parents.
