air ant2566p4w r installation guide: Media and Public Policy Robert J. Spitzer, 1993 Political scientists and media specialists accept the commonplace assumption that the mass media have a profound and direct impact on virtually every aspect of the political process, yet remarkably few systematic studies examining the relationship between media and policy exist. Media and Public

Policy brings together 15 prominent scholars who focus analytic attention on the underexamined connection between the media and public policymaking. Part I, which addresses theoretical perspectives, includes a chapter on media impact on the political status quo by leading expert Doris A. Graber and another on newsmaking and policymaking by Julio Borquez. Part II, Media and Domestic Policy, includes chapters on FCC decisions (Wenmouth Williams, Jr.), understanding public policy through news broadcasts (Marion Just and Ann Crigler), the role the media plays in economic development and agenda setting (Michael Hawthorne), and media and the right to privacy (Dean Alger). Jerry and Michael Medler contribute a chapter about media images as environmental policy, and Montague Kern examines the rhetoric of public policy issues in mass media elections. In the final section, Robert Sahr and Patrick O'Heffernan discuss mass media and U.S. foreign policy processes in two chapters, and Holli Semetko and Edie Goldenberg examine how AIDS reporters in several countries use the media to affect policymaking.

air ant2566p4w r installation guide: High Collection Nonimaging Optics W.T. Welford, 2012-12-02 High Collection Nonimaging Optics covers the many developments and the wider range of applications of nonimaging optics. This book is organized into 11 chapters that emphasize the application of nonimaging optics to concentrators for solar energy. This text begins with discussions on the development of formalisms in nonimaging optics, specifically in the use of geometrical vector flux concept, which have led to entirely different concentrator designs. These topics are followed by a description of the so-called compound parabolic concentrator, the prototype of a series of nonimaging concentrators that approach very close to being ideal and having the maximum theoretical concentration ratio. The next chapters examine the concept of the flow line approach to nonimaging concentration; the geometrical optics model of nonimaging optics; and constructional tolerances and manufacturing methods for nonimaging optical components. A chapter highlights the applications of concentrator designs to solar energy concentrations. The last chapter surveys the applications of nonimaging optics to optical system design and to instrument design, with particular reference to utilization of light sources with maximum efficiency. This book will be of great benefit to nonimaging optics scientists and design engineers.
