alabama planting guide 2023: *Desert Gardens of Steve Martino* Caren Yglesias, 2018-04-03 This survey of twenty-one gardens by Steve Martino, whose work blends colorful, man-made elements with native plants to reflect the sun-drenched beauty of the desert, is sure to inspire gardeners, landscapers, and admirers of California and the Southwest. For more than thirty years, Steve Martino has been committed to the development and advancement of landscape architecture in the Southwest. His pioneering work with native plant material and the development of a desert-derived design aesthetic is widely recognized. A recurring theme of his work is the dramatic juxtaposition of man-made elements with ecological processes of the region. His love for the desert--the interplay of light and shadow, the colors, plants, and wildlife--inspires his work. As Martino explains, Gardens consist of two worlds, the man-made and the natural one. I've described my design style as 'Weeds and Walls'--nature and man. I use native plants to make the transition from a building to the adjacent natural desert. Though Martino's work is deeply connected to the natural world, he also has a flair for the dramatic, which is apparent from his lively color selections, sculptural use of plants, and keen attention to lighting, shadows, and reflections. Boldly colored stucco walls frame compelling views of the desert and sky, expanding the outdoor living area while solving common site problems such as lack of privacy or shade. Interspersed are custom structures molded in translucent fiberglass in vivid hues--colorful arbors, outdoor showers, and internally lit benches.

alabama planting guide 2023: Plant Parasitic Nematodes in Sustainable Agriculture of North America Sergei A. Subbotin, John J. Chitambar, 2018-12-17 Plant-parasitic nematodes are recognized as one of the greatest threats to crop production throughout the world. Estimated annual crop losses of \$8 billion in the United States and \$78 billion worldwide are attributed to plant parasitic nematodes. Future developments of sustainable management systems for preventing major economical agricultural losses due to nematodes is focused on strategies that limit production costs, enhance crop yields, and protect the environment. This book presents a first compendium and overview for nematode problems and their management across North America. Each chapter provides essential information on the occurrence and distribution of plant parasitic nematodes, their major crop hosts, impact on crop production and sustainable management strategies for each region of the continent including, Canada, Mexico and all states of the USA. For each region, a thematic overview of changes in crop production affected by plant parasitic nematodes and their management strategies over time will provide invaluable information on the important role of plant parasitic nematodes in sustainable agriculture.
