Ginter, 2012-07-17 The 6th edition of this established text is streamlined to a more manageable format, with the Appendices moved to the web-site and a significant shortening of the main text. Chapters are brought to life by the 'Introductory Incidents', 'Learning Objectives', 'Perspectives', 'Strategy Capsules', useful chapter summaries; and questions for class discussion. All cases and examples have been updated or replaced. In this edition the teaching materials and web supplements have been greatly enhanced, with power-point slides, to give lecturers a unique resource.

allergan botox training courses: Cosmetic Surgery Deborah A. Sullivan, 2001 Cosmetic surgery is big business. With demand rising, this commercial medical practice has become a modern body custom. Sullivan looks beyond the cultural imperatives of appearance and examines the market dynamics inherent in the business and politics of cosmetic surgery. In so doing, she also considers the effect of commercialization on the medical profession. After reviewing prevailing beauty ideals, Sullivan looks at the social, psychological, and economic rewards and penalties resulting from the way we look. Following a historical overview of the technological advances that made cosmetic surgery possible, she explores the relationship between improved surgical techniques and the resulting increased

demand; she also examines the ensuing conflict within the profession over recognition of commercial cosmetic surgery as a specialty. Among the topics covered are sensitive areas such as physician advertising, unregulated practice, and ambulatory surgery, and the consequences of commercialism on medical judgment. allergan botox training courses: The Regulation of Cosmetic Procedures Melanie Latham, Jean McHale, 2020-04-30 This book examines the legal, ethical and regulatory debates surrounding the rise of the cosmetic procedures industry. In the past, cosmetic procedures were often seen as limited to a small number of wealthy older women. Today, such procedures have gone mainstream, partly facilitated by the rise of 'non-invasive' techniques, such as the use of Botox and Dermal Fillers. While still a business dominated by the female consumer, there is also an increasing number of males undertaking cosmetic procedures as social expectations around appearance and ageing are challenged. At the same time, the rapid expansion of this business and the incoherent, diverse approach to its regulation have given rise to concern. It has been seen as a 'Wild West'. If cosmetic procedures go wrong, such procedures give rise to real risks of harm. This book examines the historical backdrop, current practice and risks associated with cosmetic procedures. It discusses the ethical and regulatory challenges for this area. It also examines the current legal frameworks concerning people, practitioners and products in the UK. The book also draws lessons from regulatory approaches in other jurisdictions with particular reference to the United States, Brazil and France. It then sets out a legal and regulatory framework that might better protect and empower the cosmetic consumer, now and in the future. The book is likely to be of particular interest to those working in the areas of health and medical law, socio-legal studies and political science.

allergan botox training courses: Textbook on Scar Management Luc Téot, Thomas A. Mustoe, Esther Middelkoop, Gerd G. Gauglitz, 2020-12-07 This text book is open access under a CC BY 4.0 license. Written by a group of international experts in the field and the result of over ten years of collaboration, it allows students and readers to gain a detailed understanding of scar and wound treatment – a topic still dispersed among various disciplines. The content is divided into three parts for easy reference. The first part focuses on the fundamentals of scar management, including assessment and evaluation procedures, classification, tools for accurate measurement of all scar-related elements (volume density, color, vascularization), descriptions of the different evaluation scales. It also features chapters on the best practices in electronic-file storage for clinical reevaluation and telemedicine procedures for safe remote evaluation. The second section offers a comprehensive review of treatment and evidence-based technologies, presenting a consensus of the various available guidelines (silicone, surgery, chemical injections, mechanical tools for scar stabilization, lasers). The third part evaluates the full range of emerging technologies offered to physicians as alternative or complementary solutions for wound healing (mechanical, chemical, anti-proliferation). Textbook on Scar Management will appeal to trainees, fellows, residents and physicians dealing with scar management in plastic surgery, dermatology, surgery and oncology, as well as to nurses and general practitioners
