alliance of therapy dogs member portal: When You Can't Believe Your Eyes Hannah

Fairbairn, 2019-07-05 This book was first projected in 2004, when Author Hannah Fairbairn was teaching interpersonal skills at the Carroll Center for the Blind in Newton, Massachusetts. The experiences of her adult students—and her own experience of sight lost—convinced her that everyone losing vision needs access to good information about the process of adjustment to losing sight and practical ways to use assertive speech. When You Can't Believe Your Eyes is intended for anyone going through vision loss, their friends, and families. It will inform readers how to get expert professional help, face the trauma of loss, and navigate the world using speech more than sight. Each of the twelve chapters in the book contain many short sections and bullet-point lists, intended to facilitate access to the right information. It begins where you begin—at the doctor's office or the hospital. Since vision loss takes many forms, there are suggestions for questions you might ask to get a clear diagnosis and the best treatment. Part One also has a description of legal blindness and possible prevention, advice about your job, and tips for life at home. Part Two is about believing in yourself as you deal with the loss, the anger, and the fear before you come up for air and consider training. Parts Three and Four describe using assertive speech and action in all kinds of settings as

your independence and confidence increase. Part Five gives detailed information about everything from dating, and caring for babies to senior living, volunteering, and retaining your job. It is hoped that by reading and trying out the suggestions, the reader will recover full confidence, become a positive, assertive communicator, and lead a satisfying life. Because vision loss happens mostly in older years, the book is written with seniors particularly in mind. Professionals will also find it to be a useful resource for their patients.

alliance of therapy dogs member portal: Health Technology Assessment of Assistance Dogs and Dog-Assisted Interventions Martina Lundqvist, 2020-09-04 Dogs as an assistive aid for people with disabilities date as far back in time as the first century CE. Today, dogs are used in various settings to help and assist humans. 'Assistance dogs' is an umbrella term for guide dogs, hearing dogs and service dogs. They are custom trained to help and support their owners in their everyday life and thereby give them greater independence. Dogs who perform dog-assisted interventions are another type of working dog, where the dog and the owner work together as a team visiting people with various needs in different settings such as hospitals and nursing homes. These visits aim to strengthen people's inner motivation, using the dog as an external motivator. There is a lack of evaluations of working dogs in the health technology assessment context, and in the health economic evaluation context. Hence, there is a need for structured analyses that include both the short and long-term effects and the costs of assistance dogs and dog-assisted interventions. The overall aim of this thesis is to explore and assess the use of assistance dogs and dog-assisted interventions. The research questions were investigated using a variety of methods. In paper I, inferential statistical analysis was used to analyse patient-reported outcomes measures. In paper II, a thematic content analysis was employed to explore the experiences of service and hearing dogs. To study the long-term cost-effectiveness of physical service dogs and diabetes alert dogs, a decision analytic model was used in paper III. The input data in studies I, II, and III was obtained from the Service and Hearing Dog Project. In paper III, the data was also supplemented with information from published literature and expert opinions. Paper IV investigated the effects and cost-effectiveness of dog-assisted interventions, and takes the form of a systematic review. Paper I showed that a service or hearing dog may have positive impact on its owner's health-related quality of life, well-being and activity level. Paper II showed that owners of service or hearing dogs experienced both positive physical and psychosocial effects from their dog. Negative experiences were also identified, for example being denied access to public places and negative attitudes from other people. Paper III showed that physical service dogs and diabetes alert dogs are cost-effective in comparison with regular companion dogs, resulting in both lower costs and a gain in QALYs. The one-way sensitivity analysis did not change the results, but the probabilistic sensitivity analysis showed that the results were uncertain. Synthesizing the results from the review in paper IV showed that dog-assisted interventions for therapeutic purposes led to minor to moderate effects in psychiatric conditions. Dog-assisted interventions as an activity had minor to moderate effects on cognitive disorders, and dog-assisted interventions for support purposes were beneficial in different types of medical interventions. Studies of cost-effectiveness were lacking. To conclude, assistance dogs are valuable and may be cost-effective for use as assistive aids and dog-assisted interventions render minor to moderate effects in certain situations in healthcare settings. Användning av hundar som hjälpmedel för personer med funktionsnedsättning går att spåra ändå tillbaka till första århundradet e.Kr. Idag används hundar i människans tjänst i en mängd olika sammanhang. Assistanshundar är ett samlingsbegrepp för ledarhundar, signalhundar och servicehundar. De är specialutbildade för att hjälpa och stödja sina ägare i deras vardag och på så vis ge dem möjlighet

till att leva ett mer självständigt liv. Hundar som utför hundassisterade interventioner är en annan typ av tjänstehund, men deras jobb är inte att hjälpa sin ägare. Istället arbetar hundar som utför hundassisterade interventioner och deras ägare som ett team. Tillsammans besöker de personer med olika behov i olika miljöer som exempelvis sjukhus eller äldreboende. De arbetar med att stärka motivationen hos personerna de träffar. Idag saknas det övergripande utvärderingar som tittar på olika aspekter av den här typen av hundar. Det saknas även utvärderingar som specifikt studerar effekter och kostnader av assistanshundar och hundassisterade interventioner. Det finns därför ett behov av strukturerade analyser som inkluderar både kort- och långsiktiga effekter samt kostnader för denna typ av hundar och interventioner. Det övergripande syftet med denna doktorsavhandling är att utforska och utvärdera användningen av assistanshundar och hundassisterade interventioner. Frågeställningarna studeras med ett brett urval av metoder. I studie I analyseras patientrapporterade utfallsmått med statistiska metoder. I studie II genomförs en tematisk innehållsanalys för att undersöka förarnas upplevelser av service- och signalhundar. För att analysera den långsiktiga kostnadseffektiviteten av fysiska servicehundar och alarmerande diabeteshundar i studie III konstrueras en beslutsmodell. Datamaterialet i studie I, II och III hämtas från service- och signalhundsprojektet. I studie III kompletteras data med information från publicerad litteratur och med expertutlåtande. I studie IV studeras effekterna och kostnadseffektiviteten av hundassisterade interventioner genom en systematisk litteraturöversikt. Studie I visade att en service- eller signalhund kan ha en positiv inverkan på deras ägares hälsorelaterade livskvalitet, välbefinnande och aktivitetsnivå. Resultaten från de tematiska analyserna i studie II påvisade att ägare av en service- eller signalhund upplevde både positiva fysiska och psykosociala effekter av sin hund. Negativa erfarenheter av hunden identifierades också, till exempel att hunden begränsade möjligheten att vistas i offentliga miljöer och andra personers negativa attityder. Studie III visade att fysiska servicehundar och alarmerande diabeteshundar är kostnadseffektiva i jämförelse med vanliga sällskapshundar, de var både kostnadsbesparande och innebar en QALY-vinst. Känslighetsanalyser av specifika parametrar påverkade inte resultaten, men den probabilistiska känslighetsanalysen visade att resultaten var osäkra. Resultaten från den systematiska litteraturöversikten i artikel IV visade att hundassisterad interventioner som ges i terapeutiskt syfte hade små till måttliga effekter vid psykiatriska tillstånd. Hundassisterade aktiviteter hade små till måttliga effekter vid kognitiva störningar och hundassisterade interventioner som gavs som stöd vid olika typer av medicinska insatser var fördelaktiga. Studier gällande kostnadseffektivitet av hundassisterade interventioner saknades. Sammanfattningsvis, assistanshundar som hjälpmedel ger positiva effekter i flera dimensioner för sina ägare och är sannolikt kostnadseffektiva. Hundassisterade interventioner uppvisar små till måttliga effekter i vissa situationer i hälso- och sjukvården.

However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and

organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Now some half-derelict space probe, sparking fitfully past Neptune's orbit, hears a whisper from the edge of the solar system: a faint signal sweeping the cosmos like a lighthouse beam. Whatever's out there isn't talking to us. It's talking to some distant star, perhaps. Or perhaps to something closer, something en route. So who do you send to force introductions with unknown and unknowable alien intellect that doesn't wish to be met? You send a linguist with multiple personalities, her brain surgically partitioned into separate, sentient processing cores. You send a monster to command them all, an extinct hominid predator once called vampire, recalled from the grave with the voodoo of recombinant genetics and the blood of sociopaths. alliance of therapy dogs member portal: The Spell of the Sensuous David Abram, 2012-10-17 Winner of the International Lannan Literary Award for Nonfiction *Animal tracks*, word magic, the speech of stones, the power of letters, and the taste of the wind all figure prominently in this intellectual tour de force that returns us to our senses and to the sensuous terrain that sustains us. This major work of ecological philosophy startles the senses out of habitual ways of perception. For a thousand generations, human beings viewed themselves as part of the wider community of nature, and they carried on active relationships not only with other people with other animals, plants, and natural objects (including mountains, rivers, winds, and weather patterns) that we have only lately come to think of as inanimate. How, then, did humans come to sever their ancient reciprocity with the natural world? What will it take for us to recover a sustaining relation with the breathing earth? In *The Spell of the Sensuous* David Abram draws on sources as diverse as the philosophy of Merleau-Ponty, Balinese shamanism, Apache storytelling, and his own experience as an accomplished sleight-of-hand of magician to reveal the subtle dependence of human cognition on the natural environment. He explores the character of perception and excavates the sensual foundations of language, which--even at its most abstract--echoes the calls and cries of the earth. On every page of this lyrical work, Abram weaves his arguments with a passion, a precision, and an intellectual daring that recall such writers as Loren Eiseley, Annie Dillard, and Barry Lopez.

alliance of therapy dogs member portal: Animal-Assisted Psychotherapy Nancy Parish-Plass, 2013-07-15 The integration of animals into the therapy setting by psychotherapists has been a growing trend. Psychological problems treated include emotional and behavioral problems, attachment issues, trauma, and developmental disorders. An influential 1970s survey suggests that over 20 percent of therapists in the psychotherapy division of the American Psychological Association incorporated animals into their treatment in some fashion. Anecdotal evidence suggests that the number is much higher today. Since Yeshiva University psychologist Boris Levinson popularized the involvement of animals in psychotherapy in the 1960s, Israel has come to be perhaps the most advanced country in the world in the area of animal-assisted psychotherapy (AAP). This is true especially in the areas of academic training programs, theory-building, and clinical practice. Great effort has been put into understanding the mechanisms behind AAP, as well as into developing ethical guidelines that take into account the therapist's responsibility toward both client and animal. This book exposes the world to the theory and practice of AAP as conceived and used in Israel. It emphasizes evidence-based and clinically sound applications with psychotherapeutic goals, as differentiated from other animal-assisted interventions, such as AAE (animal-assisted education) and AAA (animal-assisted activities), which may have education or skills-oriented goals. Not just anyone with a dog can call him-or herself an animal-assisted therapist. This volume demonstrates not only the promise of animal-assisted psychotherapeutic approaches, but also some of the challenges the field still needs to overcome to gain widespread legitimacy.

alliance of therapy dogs member portal: WHO Expert Consultation on Rabies World

Health Organization, 2013 Although there is debate about the estimated health burden of rabies, the estimates of direct mortality and the DALYs due to rabies are among the highest of the neglected tropical diseases. Poor surveillance, underreporting in many developing countries, frequent misdiagnosis of rabies, and an absence of coordination among all the sectors involved are likely to lead to underestimation of the scale of the disease. It is clear, however, that rabies disproportionately affects poor rural communities, and particularly children. Most of the expenditure for post-exposure prophylaxis is borne by those who can least afford it. As a result of growing dog and human populations, the burden of human deaths from rabies and the economic costs will continue to escalate in the absence of concerted efforts and investment for control. Since the first WHO Expert Consultation on Rabies in 2004, WHO and its network of collaborating centres on rabies, specialized national institutions, members of the WHO Expert Advisory Panel on Rabies and partners such as the Gates Foundation, the Global Alliance for Rabies Control and the Partnership for Rabies Prevention, have been advocating the feasibility of rabies elimination regionally and globally and promoting research into sustainable cost-effective strategies. Those joint efforts have begun to break the cycle of rabies neglect, and rabies is becoming recognized as a priority for investment. This Consultation concluded that human dog-transmitted rabies is readily amenable to control, regional elimination in the medium term and even global elimination in the long term. A resolution on major neglected tropical diseases, including rabies, prepared for submission to the World Health Assembly in May 2013 aims at securing Member States' commitment to the control, elimination or eradication of these diseases. Endorsement of the resolution would open the door for exciting advances in rabies prevention and control.--Publisher's description.
